Forward-Looking Statements

The discussions in this Quarterly Report on Form 10-Q contain forward-looking statements reflecting our current expectations that involve risks and uncertainties. These forward-looking statements include, but are not limited to, statements concerning our strategy, future operations, future financial position, future revenues, future profitability, future delivery of automobiles, projected costs, expectations regarding demand and acceptance for our technologies, growth opportunities and trends in the market in which we operate, prospects, plans and objectives of management and the statements made below under the heading “Management Opportunities, Challenges and Risks.” The words “anticipates”, “believes”, “estimates”, “expects”, “intends”, “may”, “plans”, “projects”, “will”, “would” and similar expressions are intended to identify forward-looking statements, although not all forward-looking statements contain these identifying words. We may not actually achieve the plans, intentions or expectations disclosed in our forward-looking statements and you should not place undue reliance on our forward-looking statements. Actual results or events could differ materially from the plans, intentions and expectations disclosed in the forward-looking statements that we make. These forward-looking statements involve risks and uncertainties that could cause our actual results to differ materially from those in the forward-looking statements, including, without limitation, the risks set forth in Part II, Item 1A, “Risk Factors” in this Quarterly Report on Form 10-Q and in our other filings with the Securities and Exchange Commission. We do not assume any obligation to update any forward-looking statements.

The accompanying notes are an integral part of these condensed consolidated financial statements.

Tesla Motors, Inc.

**Notes to Condensed Consolidated Financial Statements
(Unaudited)**

1. Overview of the Company

Tesla Motors, Inc. (Tesla, we, us or our) was incorporated in the state of Delaware on July 1, 2003. We design, develop, manufacture and sell high-performance fully electric vehicles and advanced electric vehicle powertrain components. We have wholly-owned subsidiaries in North America, Europe and Asia. The primary purpose of these subsidiaries is to market and/or service our vehicles.

Public Offerings and Concurrent Private Placements

In May 2013, we completed a public offering of common stock and sold a total of 3,902,862 shares of our common stock for total cash proceeds of approximately \$355.5 million (which includes 487,857 shares or \$45.0 million sold to Elon Musk, our Chief Executive Officer and cofounder (CEO)), net of underwriting discounts and offering costs. We also sold 596,272 shares of our common stock to our CEO and received total cash proceeds of \$55.0 million in a private placement at the public offering price. Concurrent with these equity transactions, we also issued \$660.0 million principal amount of 1.50% convertible senior notes due June 2018 in a public offering and received total cash proceeds of approximately \$648.0 million, net of underwriting discounts and offering costs (see Note 6).

In October 2012, we completed a public offering of common stock and sold a total of 7,964,601 shares of our common stock for total cash proceeds of \$222.1 million (which includes 35,398 shares or \$1.0 million sold to our CEO), net of underwriting discounts and offering costs.

Restatement of Prior Year Amounts

In conjunction with our Annual Report on Form 10-K for the year ended December 31, 2012 filed with the Securities and Exchange Commission (SEC) on March 7, 2013, we restated the unaudited condensed consolidated statement of cash flows for the six months ended June 30, 2012. Amounts related to purchases of property and equipment during the period that were not paid as of June 30, 2012 were erroneously included as cash outflows from investing activities in our previously issued financial statements. This correction resulted in a \$16.5 million decrease in purchases of property and equipment included in cash flows used in investing activities and a corresponding increase in the change in accounts payable resulting in an increase in cash flows used in operating activities. We also corrected our supplemental disclosure of noncash acquisition of property and equipment by an increase of \$28.1 million for the six months ended June 30, 2012. There was no impact on our previously reported total cash and cash equivalents, condensed consolidated balance sheet or condensed consolidated statement of operations.

[Table of Contents](#)

As detailed in the table below, this restatement impacted the following condensed consolidated cash flow line items (in thousands):

	Six Months Ended June 30, 2012		
	As Previously Reported	Adjustment	As Restated
Cash Flows From Operating Activities			
Accounts payable and accrued liabilities	\$ 22,847	\$ (16,496)	\$ 6,351
Net cash used in operating activities	(111,068)	(16,496)	(127,564)
Cash Flows From Investing Activities			
Purchases of property and equipment, excluding capital leases	(129,273)	16,496	(112,777)
Net cash used in investing activities	(98,655)	16,496	(82,159)
Supplemental disclosure of noncash investing activities			
Acquisition of property and equipment	2,106	28,061	30,167

2. Summary of Significant Accounting Policies

Basis of Consolidation

The condensed consolidated financial statements include the accounts of Tesla and its wholly-owned subsidiaries. All significant inter-company transactions and balances have been eliminated in consolidation.

Use of Estimates

The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent liabilities at the date of the financial statements, and reported amounts of expenses during the reporting period, including revenue recognition, residual value of operating lease vehicles, inventory valuation, warranties, fair value of financial instruments and stock-based compensation. Actual results could differ materially from those estimates.

Unaudited Interim Financial Statements

The accompanying condensed consolidated balance sheet as of June 30, 2013, the condensed consolidated statements of operations for the three and six months ended June 30, 2013 and 2012, the condensed consolidated statements of comprehensive loss for the three and six months ended June 30, 2013 and 2012 and the condensed consolidated statements of cash flows for the six months ended June 30, 2013 and 2012 and other information disclosed in the related notes are unaudited. The condensed consolidated balance sheet as of December 31, 2012 was derived from our audited consolidated financial statements at that date. The accompanying condensed consolidated financial statements should be read in conjunction with the audited consolidated financial statements and related notes contained in our Form 10-K for the year ended December 31, 2012 filed with the SEC.

The accompanying interim condensed consolidated financial statements and related disclosures have been prepared on the same basis as the annual consolidated financial statements and, in the opinion of management, reflect all adjustments, which include only normal recurring adjustments, necessary for a fair statement of the results of operations for the periods presented. The condensed consolidated results of operations for any interim period are not necessarily indicative of the results to be expected for the full year or for any other future year or interim period.

[Table of Contents](#)

Revenue Recognition

We recognize revenues from sales of Model S and the Tesla Roadster, including vehicle options and accessories, vehicle service and sales of regulatory credits, such as zero emission vehicle and greenhouse gas emission credits, as well as sales of electric vehicle powertrain components and systems, such as battery packs and drive units. We recognize revenue when: (i) persuasive evidence of an arrangement exists; (ii) delivery has occurred and there are no uncertainties regarding customer acceptance; (iii) fees are fixed or determinable; and (iv) collection is reasonably assured.

For Model S sales, revenue is generally recognized when all risks and rewards of ownership are transferred to our customers. In certain circumstances, we may deliver a vehicle to a customer without all of the options ordered by the customer, provided that such options do not limit the functionality of the vehicle. In such cases, we continue to defer the related revenue based on the undelivered items' fair value, as evidenced by the contractual price of the option in stand-alone transactions, where available, or using the selling price hierarchy where such prices do not exist. Additionally, if a customer purchases a vehicle option that requires us to provide services in the future, we will defer the related revenue based on the undelivered items' fair value and recognize the associated revenue over our expected performance period. As of June 30, 2013, we had deferred \$16.6 million related to the purchase of vehicle service plans and \$4.1 million related to access to our Supercharger network. During the three months ended June 30, 2013, we deferred \$2.8 million related to Supercharger network access that was recognized as revenues during the first quarter of 2013 but that should have been deferred over the expected term of use of the Supercharger network. This correction was not material to the current or prior period consolidated financial statements.

Resale Value Guarantee

In April 2013, we began offering a resale value guarantee to all customers who purchased a Model S in the United States and financed their vehicle through one of our specified commercial banking partners. Under the program, Model S customers have the option of selling their vehicle back to us during the period of 36 to 39 months after delivery for a pre-determined resale value. Although we receive the full amount of cash for the vehicle sales price at delivery, we account for transactions under the resale value guarantee program as operating leases. Accordingly, we defer and amortize to automotive sales revenue the initial purchase consideration less resale value guarantee amount on a straight-line basis, over the contractual term of the guarantee program. Similarly, we capitalize and depreciate the cost of the respective operating lease vehicles less resale value guarantee amount to cost of automotive sales over the same period. If a customer decides not to sell their vehicle back to us by the end of the resale value guarantee term, any unamortized deferred revenue and operating lease vehicle net book value is then recognized in automotive sales and cost of automotive sales, respectively.

The resale value guarantee amount represents management's best estimate as to the resale value of the Model S vehicle and related vehicle options during the 36 to 39 month period after delivery. Since we are depreciating our operating lease vehicles to the resale value guarantee amount, we will adjust our depreciation estimates as needed, if the resale value is projected to be lower in future periods. As we accumulate more actual data related to the resale experience of Model S, we may be required to make significant changes to our estimates.

As of June 30, 2013, we recorded \$75.2 million in deferred revenues and \$72.4 million in other long-term liabilities related to Model S deliveries with the resale value guarantee and recorded \$123.9 million in operating lease vehicles, net. During the three months ended June 30, 2013, we recognized revenue of \$1.9 million in automotive sales and \$1.4 million in cost of automotive sales related to this program.

Warranties

We began recording warranty reserves with the commencement of Tesla Roadster sales in 2008. Initially, Tesla Roadsters were sold with a warranty of three years or 36,000 miles, which we extended to four years or 50,000 miles for the purchasers of our 2008 Tesla Roadster. Tesla Roadster customers had the opportunity to purchase an Extended Service plan for the period after the end of the New Vehicle Limited Warranty to cover additional services for an additional three years or 36,000 miles, provided they are purchased within a specified period of time. In June 2012, we commenced deliveries of Model S. Model S is sold with a warranty of four years or 50,000 miles for most vehicle components and covers the battery pack for a period of eight years or 125,000 miles or unlimited miles, depending on the size of the vehicle's battery, although the battery pack's charging capacity is not covered under the New Vehicle Limited Warranty or any Extended Service plan. Accrued warranty activity consisted of the following for the periods presented (in thousands):

	Three Months Ended June 30,		Six Months Ended June 30,	
	2013	2012	2013	2012
Accrued warranty - beginning of period	\$24,061	\$5,930	\$13,013	\$ 6,315
Warranty costs incurred	(1,601)	(813)	(4,708)	(1,682)
Changes in a liability for pre-existing warranties, including expirations	3,174	—	3,174	—
Provision for warranty	11,244	606	25,399	1,090
Accrued warranty - end of period	<u>\$36,878</u>	<u>\$5,723</u>	<u>\$36,878</u>	<u>\$ 5,723</u>

[Table of Contents](#)

We provide a warranty on all vehicle, production powertrain components and systems sales, and we accrue warranty reserves at the time a vehicle or production powertrain component or system is delivered to the customer. Warranty reserves include management's best estimate of the projected costs to repair or to replace any items under warranty, based on actual warranty experience as it becomes available and other known factors that may impact our evaluation of historical data. For new vehicles, warranty reserves are based on management's best estimate of projected warranty experience until adequate historical data is accumulated. Our warranty reserves do not include projected warranty costs associated with our resale value guarantee vehicles as such actual warranty costs are expensed as incurred. For the three months ended June 30, 2013, warranty costs incurred for our resale value guarantee vehicles were immaterial. We may have material changes as we accumulate more actual data and experience. We review our reserves at least quarterly to ensure that our accruals are adequate in meeting expected future warranty obligations, and we will adjust our estimates as needed. Warranty expense is recorded as a component of cost of revenues in the consolidated statements of operations. The portion of the warranty provision which is expected to be incurred within 12 months from the balance sheet date is classified as current, while the remaining amount is classified as long-term.

Concentration of Risk

Credit Risk

Financial instruments that potentially subject us to a concentration of credit risk consist of cash, cash equivalents, restricted cash and accounts receivable. Our cash equivalents are primarily invested in money market funds with high credit quality financial institutions in the United States. At times, these deposits and securities may be in excess of insured limits. We invest cash not required for use in operations in high credit quality securities based on our investment policy. Our investment policy provides guidelines and limits regarding credit quality, investment concentration, investment type, and maturity that we believe will provide liquidity while reducing risk of loss of capital.

As of June 30, 2013 and December 31, 2012, our accounts receivable were derived primarily from sales of regulatory credits, as well as the development and sales of powertrain systems to other global automobile manufacturers. Accounts receivable also include amounts to be received from our commercial banking partners for approved financing arranged (OEMs) between the customer and each banking partner.

The following summarizes the accounts receivable from our OEM customers in excess of 10% of our total accounts receivable:

	June 30, 2013	December 31, 2012
Customer A	26%	—
Customer B	11%	—
Customer C	10%	56%
Customer D	8%	15%

[Table of Contents](#)

Supply Risk

Although there may be multiple suppliers available, many of the components used in our vehicles are purchased by us from a single source. If these single source suppliers fail to satisfy our requirements on a timely basis at competitive prices, we could suffer manufacturing delays, a possible loss of revenues, or incur higher cost of sales, any of which could adversely affect our operating results.

Net Loss per Share of Common Stock

Our basic and diluted net loss per share of common stock is calculated by dividing net loss by the weighted-average shares of common stock outstanding for the period. Potentially dilutive shares, which are based on the number of shares underlying outstanding stock options and warrants as well as our convertible senior notes, are not included when their effect is antidilutive.

The following table presents the potential common shares outstanding that were excluded from the computation of basic and diluted net loss per share of common stock for the periods related to the following securities:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2013	2012	2013	2012
Period-end stock options	268,026	18,820,113	268,026	18,820,113
Period-end DOE warrant	—	3,090,111	—	3,090,111
Period-end convertible senior notes	5,300,196	—	5,300,196	—
Period-end warrants related to our call spread	5,300,196	—	5,300,196	—

Since we will settle the principal amount of our convertible senior notes in cash, we use the treasury stock method for calculating any potential dilutive effective of the conversion spread on diluted net income per share. The conversion spread will have a dilutive impact on diluted net income per share of common stock when the average market price of our common stock for a given period exceeds the conversion price of \$124.52 per share.

Uncertain Tax Positions

As of June 30, 2013 and December 31, 2012, the aggregate balances of our gross unrecognized tax benefits were \$14.8 million and \$12.6 million, respectively, of which if recognized, \$0.3 million would affect our effective tax rate.

3. Balance Sheet Components

Inventory

As of June 30, 2013 and December 31, 2012, our inventory consisted of the following (in thousands):

	June 30, 2013	December 31, 2012
Raw materials	\$ 99,734	\$ 163,637
Work in process	47,874	24,535
Finished goods	77,860	62,559
Service parts	29,423	17,773
Total	<u>\$254,891</u>	<u>\$ 268,504</u>

[Table of Contents](#)**Property, Plant and Equipment**

As of June 30, 2013 and December 31, 2012, our property, plant and equipment, net, consisted of the following (in thousands):

	June 30, 2013	December 31, 2012
Machinery, equipment and office furniture	267,979	\$ 223,745
Tooling	211,793	172,584
Leasehold improvements	59,910	39,224
Building and building improvements	58,492	50,574
Computer equipment and software	28,886	22,125
Land	26,402	26,391
Construction in progress	37,082	75,129
	690,544	609,772
Less: Accumulated depreciation and amortization	(94,965)	(57,543)
Total	<u>\$595,579</u>	<u>\$ 552,229</u>

Construction in progress is comprised primarily of assets related to the manufacturing of our Model S, including tooling and manufacturing equipment and capitalized interest expense. Depreciation of these assets begins when they are ready for their intended use. Interest expense on outstanding debt is capitalized during the period of significant capital asset construction. Capitalized interest on construction in progress is included in property, plant and equipment, and is amortized over the life of the related assets. During the three and six months ended June 30, 2013, we capitalized \$0.4 million and \$2.5 million, respectively. During the three and six months ended June 30, 2012, we capitalized \$1.9 million and \$3.5 million, respectively.

Depreciation and amortization expense during the three and six months ended June 30, 2013 was \$20.2 million and \$37.6 million, respectively. Depreciation and amortization expense during the three and six months ended June 30, 2012 was \$3.7 million and \$6.9 million, respectively.

Other Assets

As of June 30, 2013 and December 31, 2012, our other assets consisted of the following (in thousands):

	June 30, 2013	December 31, 2012
Emission permits	\$14,029	\$ 14,267
Loan facility issuance costs, net	—	5,759
Convertible senior notes issuance costs, net	8,337	—
Other	1,830	1,937
Total	<u>\$24,196</u>	<u>\$ 21,963</u>

Emission permits are related to the operation of our Tesla Factory; therefore, we amortize the emission permits over the same useful life. Loan facility issuance costs associated with our DOE Loan Facility (see Note 6) were fully amortized to interest expense during the three and six months ended June 30, 2013 upon the extinguishment of our DOE Loan Facility. Convertible senior notes issuance costs of \$8.3 million as of June 30, 2013 are related to our 1.50% convertible senior notes due June 2018 (see Note 6) and are being amortized over the five-year term of the notes.

[Table of Contents](#)**Accrued Liabilities**

As of June 30, 2013 and December 31, 2012, our accrued liabilities consisted of the following (in thousands):

Accrued Liabilities	June 30, 2013	December 31, 2012
Payroll and related costs	\$18,943	\$ 15,525
Taxes payable	16,080	9,710
Accrued purchases	9,109	10,334
Accrued warranty	9,103	3,056
Other	1,891	1,173
Total	<u>\$55,126</u>	<u>\$ 39,798</u>

Other Long-Term Liabilities

As of June 30, 2013 and December 31, 2012, our other long-term liabilities consisted of the following (in thousands):

	June 30, 2013	December 31, 2012
Resale value guarantee	\$ 72,358	\$ —
Accrued warranty, long-term	27,775	9,957
Deferred rent liability	6,985	6,075
Environmental liabilities	5,300	5,300
Other	3,173	3,838
Total	<u>\$115,591</u>	<u>\$ 25,170</u>

The resale value guarantee represents the aggregate future amount that we will pay to participating Model S customers in the United States (see Note 2) only if the customer elects to sell their vehicle back to us during the period of 36 to 39 months after delivery. If a customer decides not to sell their vehicle back to us by the end of resale value guarantee term, we will then recognize the associated resale value guarantee amount in automotive sales.

4. Fair Value of Financial Instruments

The carrying values of our financial instruments including cash equivalents, accounts receivable and accounts payable approximate their fair value due to their short-term nature. As a basis for determining the fair value of certain of our assets and liabilities, we established a three-tier fair value hierarchy which prioritizes the inputs used in measuring fair value as follows: (Level I) observable inputs such as quoted prices in active markets; (Level II) inputs other than the quoted prices in active markets that are observable either directly or indirectly; and (Level III) unobservable inputs in which there is little or no market data which requires us to develop our own assumptions. This hierarchy requires us to use observable market data, when available, and to minimize the use of unobservable inputs when determining fair value. Our financial assets that are measured at fair value on a recurring basis consisted of cash equivalents. Our liabilities that were measured at fair value on a recurring basis consist of our common stock warrant liability.

All of our cash equivalents and current restricted cash, which are comprised primarily of money market funds, are classified within Level I of the fair value hierarchy because they are valued using quoted market prices or market prices for similar securities. Our common stock warrant liability (see Note 6) is classified within Level III of the fair value hierarchy.

[Table of Contents](#)

As of June 30, 2013 and December 31, 2012, the fair value hierarchy for our financial assets and financial liabilities that are carried at fair value was as follows (in thousands):

	June 30, 2013				December 31, 2012			
	Fair Value	Level I	Level II	Level III	Fair Value	Level I	Level II	Level III
Money market funds	\$581,209	\$581,209	\$ —	\$ —	\$60,272	\$60,272	\$ —	\$ —
Common stock warrant liability	—	—	—	—	10,692	—	—	10,692

The changes in the fair value of our common stock warrant liability (see Note 6) were as follows (in thousands):

	Three Months Ended June 30,		Six Months Ended June 30,	
	2013	2012	2013	2012
Fair value, beginning of period	\$ —	\$ 8,683	\$ 10,692	\$8,838
Change in fair value	—	(154)	(10,692)	(309)
Fair value, end of period	<u>\$ —</u>	<u>\$ 8,529</u>	<u>\$ —</u>	<u>\$8,529</u>

The estimated fair value of our convertible senior notes based on a market approach was approximately \$578.7 million (par value of \$660.0 million) as of June 30, 2013, and represents a Level II valuation. The estimated fair value of our DOE Loan based on a market approach was approximately \$366.9 million (par value of \$452.3 million) as of December 31, 2012, and represents a Level II valuation. When determining the estimated fair value of our long-term debt, we used a commonly accepted valuation methodology and market-based risk measurements that are indirectly observable, such as credit risk.

5. Customer Deposits

Customer deposits consist of payments that allow potential customers to make an advance payment for the future purchase of a Model S or Model X. These amounts are recorded as current liabilities until the vehicle is delivered. We require full payment of the purchase price of the vehicle only upon delivery of the vehicle to the customer. Amounts received by us as customer deposits are generally not restricted as to their use by us. Upon delivery of the vehicle, the related customer deposits are applied against the customer's total purchase price for the vehicle and recognized in automotive sales as part of the respective vehicle sale.

Historically, we have referred to such customer deposits as reservation payments and these initial reservation payments have been fully refundable until such time that the customer selected the vehicle specifications and entered into a purchase agreement. We have eliminated the reservation process for Model S in North America and in most of our markets in Europe, as vehicle production became more reliable and customer wait times decreased. Customers now initiate their purchase by ordering their customized Model S rather than placing a generic reservation in queue. As a result of this transition away from reservations, we have renamed the "reservation payments" caption on our condensed consolidated financial statements to "customer deposits."

As of June 30, 2013 and December 31, 2012, we held customer deposits of \$133.7 million and \$138.8 million, respectively.

6. Long-term Debt Obligations

1.50% Convertible Senior Notes and Call Spread

In May 2013, we issued \$660.0 million aggregate principal amount of 1.50% convertible senior notes due 2018 (Notes) in a public offering. The net proceeds from the offering, after deducting transaction costs, were approximately \$648.0 million. We incurred \$12.0 million of debt issuance costs in connection with the issuance of the Notes which we have recorded in other assets and are amortizing to interest expense using the effective interest method over the contractual term of the Notes. The interest under the Notes is fixed at 1.50% per annum and is payable semi-annually in arrears on June 1 and December 1 of each year, commencing on December 1, 2013. During the three months ended June 30, 2013, we recognized \$1.3 million of interest expense related to the amortization of debt issuance costs and accrued coupon interest.

Each \$1,000 of principal of the Notes will initially be convertible into 8.0306 shares of our common stock, which is equivalent to an initial conversion price of approximately \$124.52 per share, subject to adjustment upon the occurrence of specified events. Holders of the Notes may convert their Notes at their option on or after March 1, 2018. Further, holders of the Notes may convert their Notes at their option prior to March 1, 2018, only under the following circumstances: (1) during any fiscal quarter beginning after the fiscal quarter ending September 30, 2013, if the last reported sale price of our common stock for at least 20 trading days (whether or not consecutive) during the last 30 consecutive trading days of the immediately preceding fiscal quarter is greater than or equal to 130% of the conversion price on each applicable trading day; (2) during the five business day period following any five consecutive trading day period in which the trading price for the Notes is less than 98% of the average of the closing sale price of our common stock for each day during such five trading day period; (3) if we make specified distributions to holders of our common stock or if specified corporate transactions occur. Upon conversion, we would pay the holders the cash and, if applicable, shares of our common stock (subject to our right to deliver cash in lieu of all or a portion of such shares of our common stock) based on a daily conversion value, as defined. As of June 30, 2013, none of the conditions allowing holders of the Notes to convert have been met. If a fundamental change occurs prior to the maturity date, holders of the Notes may require us to repurchase all or a portion of their Notes for cash at a repurchase price equal to 100% of the principal amount of the Notes to be repurchased, plus any accrued and unpaid interest. In addition, if specific corporate events occur prior to the maturity date, we will increase the conversion rate for a holder who elects to convert its Notes in connection with such a corporate event in certain circumstances.

In accordance with accounting guidance on embedded conversion features, we valued and bifurcated the conversion option associated with the Notes from the host debt instrument and recorded the conversion option of \$82.8 million in stockholders' equity. The resulting debt discount on the Notes is being amortized to interest expense at an effective interest rate of 4.29% over the contractual term of the Notes. During the three months ended June 30, 2013, we recognized \$1.6 million of interest expense related to the amortization of the debt discount. As of June 30, 2013, the net carrying value of the Notes was \$578.7 million.

In connection with the offering of the Notes, we entered into convertible note hedge transactions whereby we have the option to purchase up to 5.3 million shares of our common stock at a price of approximately \$124.52 per share. The cost of the convertible note hedge transactions was \$177.5 million. In addition, we sold warrants whereby the holders of the warrants have the option to purchase up to approximately 5.3 million shares of our common stock at a price of \$184.48 per share. We received \$120.3 million in cash proceeds from the sale of these warrants. Taken together, the purchase of the convertible note hedges and the sale of warrants, which we also refer to as the call spread, are intended to offset any actual dilution from the

[Table of Contents](#)

conversion of the Notes and to effectively increase the overall conversion price from \$124.52 to \$184.48 per share. As these transactions meet certain accounting criteria, the convertible note hedges and warrants are recorded in stockholders' equity and are not accounted for as derivatives. The net cost of \$57.2 million incurred in connection with the convertible note hedge and warrant transactions was recorded as a reduction to additional paid-in capital in the condensed consolidated balance sheet as of June 30, 2013.

Full Repayment of Department of Energy Loan Facility

On January 20, 2010, we entered into a loan facility with the Federal Financing Bank (FFB), and the DOE, pursuant to the Advanced Technology Vehicles Manufacturing (ATVM) Incentive Program. This loan facility was subsequently amended from time to time, including in September 2012 to amend the timing of pre-funding the principal payment due in June 2013 and in March 2013 to accelerate the maturity date of the DOE Loan Facility to December 15, 2017, and create an obligation to repay approximately 1.0% of the outstanding principal under the DOE Loan Facility on or before June 15, 2013. We refer to the loan facility with the DOE as the DOE Loan Facility. Under the DOE Loan Facility, the FFB had made available to us two multi-draw term loan facilities in an aggregate principal amount of \$465.0 million. As of August 31, 2012, we had fully drawn down the aforementioned facilities.

All outstanding amounts under the DOE Loan Facility were repayable in quarterly installments, which commenced on December 15, 2012 and would have been due on the maturity date of December 15, 2017. On May 22, 2013, in connection with the closing of our offerings of common stock and Notes, we paid \$451.8 million to settle all outstanding loan amounts of \$441.0 million, including principal and interest, as well as an early repayment penalty of \$10.8 million which is recorded in interest expense for the three months ended June 30, 2013.

Under the DOE Loan Facility, we had agreed to pre-fund a dedicated debt service reserve account with our planned loan repayments as required by the DOE loan facility. Upon termination of the DOE Loan Facility, \$29.3 million held in this dedicated account was released by DOE.

DOE Warrant Expiration

In connection with the closing of the DOE Loan Facility, we had also issued a warrant to the DOE to purchase up to 9,255,035 shares of our Series E convertible preferred stock at an exercise price of \$2.51 per share. Upon the completion of our IPO on July 2, 2010, this preferred stock warrant became a warrant to purchase up to 3,090,111 shares of common stock at an exercise price of \$7.54 per share.

[Table of Contents](#)

As a result of our repayment of all outstanding principal and interest under the DOE Loan Facility and the termination of the DOE Loan Facility in May 2013, the DOE warrant expired. Additionally, we amortized all remaining unamortized debt issuance costs related to the DOE Loan Facility. During the three and six months ended June 30, 2013, we recorded \$5.6 million and \$5.8 million to interest expense, respectively. During the three and six months ended June 30, 2012, we amortized \$0.2 million and \$0.3 million to interest expense, respectively. For more information on the DOE warrant, see Note 8 to our Consolidated Financial Statements included in our Annual Report on Form 10-K for the year ended December 31, 2012 under Item 8. Financial Statements and Supplementary Data.

7. Equity Incentive Plans

We account for stock-based compensation by measuring and recognizing the fair value of all stock-based payment awards made to employees based on the estimated grant date fair values, including employee stock options and our employee stock purchase plan. We use the Black-Scholes option pricing model to estimate the value of employee stock options which requires a number of assumptions to determine the model inputs. These include the expected volatility of the stock's market price, the expected term of the stock-based awards, the expected risk free rate of interest and any dividend yields. As stock-based compensation expense is based on awards ultimately expected to vest, it has been reduced for estimated forfeitures. We estimate and adjust forfeiture rates based on a periodic review of recent forfeiture activity and expected future employee turnover. As we have been operating as a public company for a period of time that is shorter than our estimated expected option life, we concluded that our historical price volatility does not provide a reasonable basis for input assumptions within the Black-Scholes valuation model when determining the fair value of its stock options. As a result, our expected volatility is based on the historical volatility of a peer group of publicly traded companies.

2012 CEO Grant

In August 2012, our Board of Directors granted 5,274,901 stock options to our CEO (2012 CEO Grant). The 2012 CEO Grant consists of ten vesting tranches with a vesting schedule based entirely on the attainment of both performance conditions and market conditions, assuming continued employment and service to us through each vesting date. Each of the ten vesting tranches requires a combination of one of

[Table of Contents](#)

the ten pre-determined performance achievements and an incremental increase in our market capitalization of \$4.0 billion, as compared to the initial market capitalization of \$3.2 billion at the time of the 2012 CEO Grant. Stock-based compensation expense associated with the 2012 CEO Grant is recognized for each performance condition over the vesting period beginning at the point in time that the relevant performance condition is considered probable of being met, regardless as to whether the related market condition is ever met (though meeting the market condition would also be required in order for the related options to ultimately vest).

As of June 30, 2013, the following three performance milestones, coupled with the required market conditions, were considered probable of achievement:

- Successful completion of the Model X Engineering Prototype (Alpha);
- Successful completion of the Model X Vehicle Prototype (Beta); and
- Completion of the first Model X Production Vehicle.

Stock-based compensation expense related to the 2012 CEO Grant was \$4.3 million and \$5.2 million for the three and six months ended June 30, 2013, respectively.

Summary Stock Based Compensation Information

The following table summarizes our stock-based compensation expense by line item in the condensed consolidated statements of operations (in thousands):

	Three Months Ended June 30,		Six Months Ended June 30,	
	2013	2012	2013	2012
Cost of sales	\$ 1,063	\$ 78	\$ 2,599	\$ 85
Research and development	8,565	7,133	16,209	13,065
Selling, general and administrative	9,631	5,332	15,319	10,104
Total	<u>\$19,259</u>	<u>\$12,543</u>	<u>\$34,127</u>	<u>\$23,254</u>

8. Information about Geographic Areas

We have determined that we operate in one reporting segment which is the design, development, manufacturing and sales of electric vehicles and electric vehicle powertrain components.

The following tables set forth revenues and long-lived assets by geographic area (in thousands):

Revenues

	Three Months Ended June 30,		Six Months Ended June 30,	
	2013	2012	2013	2012
North America	\$400,137	\$ 8,144	\$952,634	\$25,252
Europe	4,743	16,756	13,594	25,987
Asia	259	1,753	703	5,581
Total	<u>\$405,139</u>	<u>\$26,653</u>	<u>\$966,931</u>	<u>\$56,820</u>

During the three and six months ended June 30, 2013, we recognized revenues of \$382.6 million and \$917.1 million, respectively, and during the three and six months ended June 30, 2012, we recognized revenues of \$8.0 million and \$25.0 million, respectively in the United States.

[Table of Contents](#)**Long-lived Assets**

	June 30, 2013	December 31, 2012
United States	\$712,975	\$ 552,302
International	14,072	9,998
Total	<u>\$727,047</u>	<u>\$ 562,300</u>

9. Strategic Partnerships***Daimler Mercedes-Benz B-Class EV Program***

During the fourth quarter of 2011, Daimler engaged us to assist with the development of a full electric powertrain for a Daimler Mercedes-Benz B-Class EV vehicle. In the first half of 2012, we received two purchase orders from Daimler related to the development of a full electric powertrain for a Daimler Mercedes-Benz vehicle and recognized \$4.3 million in development services revenue during the three months ended June 30, 2012. During the fourth quarter of 2012, we entered into a final development agreement, which includes certain development milestones and related payments. Pursuant to the development agreement, Daimler will pay us up to \$33.2 million for the successful completion of certain at risk development milestones and the delivery of prototype samples. During the three and six months ended June 30, 2013, we completed various milestones, delivered prototype samples and recognized \$3.6 million and \$10.2 million in development services revenue, respectively.

Toyota RAV4 Program

In July 2011, we entered into a supply and services agreement with Toyota for the supply of a validated electric powertrain system, including a battery pack, charging system, inverter, motor, gearbox and associated software for integration into the electric vehicle version of the Toyota RAV4. Additionally, we provide Toyota with certain services related to the supply of the electric powertrain system. During the three months ended March 31, 2012, we began delivering electric powertrain systems to Toyota. During the three and six months ended June 30, 2013, we recognized revenue of \$13.3 million and \$27.7 million in automotive sales, respectively. During the three and six months ended June 30, 2012, we recognized revenue of \$4.4 million and \$4.7 million in automotive sales, respectively.

In October 2010, we entered into a Phase 1 contract services agreement with Toyota for the development of the electric powertrain system for the Toyota RAV4 electric vehicle. Toyota paid \$60.1 million for the successful completion of certain at risk development milestones and the delivery of prototype samples, including a \$5.0 million upfront payment that we received upon the execution of the agreement. During the three months ended March 31, 2012, we completed various milestones and along with the amortization of our upfront payment and the delivery of certain prototype samples, we recognized \$10.7 million in development services revenue. As of March 31, 2012, all development milestones under the Phase 1 agreement had been completed; therefore, no further development services revenue under the Phase 1 agreement have been recorded subsequently.

10. Commitments and Contingencies***Environmental Liabilities***

In May 2010, we entered into an agreement to purchase an existing automobile production facility located in Fremont, California from New United Motor Manufacturing, Inc. (NUMMI). NUMMI has previously identified environmental conditions at the Fremont site which affect soil and groundwater, and until recently, were undertaking efforts to address these conditions. These conditions are now being addressed by us and NUMMI. Although we have been advised by NUMMI that it has documented and

[Table of Contents](#)

managed the environmental issues and we completed a reasonable level of diligence on such environmental issues at the time we purchased the facility, we cannot determine the potential costs to remediate any pre-existing contamination with any certainty. Based on management's best estimate, we estimated the fair value of the environmental liabilities that we assumed to be \$5.3 million. The fair value of these liabilities was determined based on an expected value analysis of the related potential costs to investigate, remediate and manage various environmental conditions that were identified as part of NUMMI's facility decommissioning activities as well as our own diligence efforts. As we continue with our construction and operating activities, it is reasonably possible that our estimate of environmental liabilities may change materially.

We have reached an agreement with NUMMI under which, over a ten year period, we will pay the first \$15.0 million of any costs of any governmentally-required remediation activities for contamination that existed prior to the completion of the facility and land purchase for any known or unknown environmental conditions, and NUMMI has agreed to pay the next \$15.0 million for such remediation activities. Our agreement provides, in part, that NUMMI will pay up to the first \$15.0 million on our behalf if such expenses are incurred in the first four years of our agreement, subject to our reimbursement of such costs on the fourth anniversary date of the closing.

On the ten-year anniversary of the closing or whenever \$30.0 million has been spent on the remediation activities, whichever comes first, NUMMI's liability to us with respect to remediation activities ceases, and we are responsible for any and all environmental conditions at the Fremont site. At that point in time, we have agreed to indemnify, defend, and hold harmless NUMMI from all liability and we have released NUMMI for any known or unknown claims except for NUMMI's obligations for representations and warranties under the agreement. As of June 30, 2013 and December 31, 2012, we have accrued \$5.3 million related to these environmental liabilities.

Other Commitments and Contingencies

From time to time, we are subject to various legal proceedings that arise from the normal course of business activities. In addition, from time to time, third parties may assert intellectual property infringement claims against us in the form of letters and other forms of communication. If an unfavorable ruling were to occur, there exists the possibility of a material adverse impact on our results of operations, prospects, cash flows, financial position and brand.

11. Subsequent Events

Purchase of Land in Fremont, California

In July 2013, we completed the purchase of approximately 31 acres of land located in Fremont, California that is adjacent to our current manufacturing facility for potential future expansion. We paid \$18.5 million related to this purchase.

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

The following discussion and analysis should be read in conjunction with our condensed consolidated financial statements and the related notes that appear elsewhere in this Form 10-Q.

[Table of Contents](#)

Overview and Quarter Highlights

We design, develop, manufacture and sell high-performance fully electric vehicles and advanced electric vehicle powertrain components. We introduced our first vehicle, the Tesla Roadster, in early 2008. The Roadster's proprietary electric vehicle powertrain system is the foundation of our powertrain technology and, with design enhancements, forms the basis for our Model S sedan, our Model X crossover and other future vehicles. We commenced deliveries of Model S in June 2012 and increased production to an annualized rate of 20,000 per year by the end of 2012. We have recently increased our production rate to meet our external guidance of 21,000 per year and future expected demand. In February 2012, we revealed an early prototype of the Model X crossover, a vehicle based on the Model S platform. We plan to start Model X production in late 2014. We sell our vehicles through our own sales and service network.

We delivered slightly over 5,150 Model S vehicles during the three months ended June 30, 2013 an increase from slightly over 4,900 Model S vehicles for the three months ended March 31, 2013. During the three months ended June 30, 2013, we recognized total revenues of \$405.1 million, an increase of \$378.5 million over total revenues of \$26.6 million for the three months ended June 30, 2012. Automotive sales revenue of \$401.5 million increased \$379.5 million from the three months ended June 30, 2012, primarily driven by Model S deliveries in North America which commenced in June 2012, regulatory credit sales and powertrain component sales to Toyota for the Toyota RAV4 EV.

Development services revenue decreased slightly to \$3.6 million for the three months ended June 30, 2013 from \$4.6 million for the three months ended June 30, 2012, due primarily to the level of development work under the Mercedes-Benz B-Class EV program. During the second quarter of 2013, we recognized development services revenue for the achievement of a development milestone under this program.

Gross margin for the three months ended June 30, 2013 was 24.8%, an increase from 17.1% for the three months ended March 31, 2013, reflecting Model S cost improvements including part cost reductions, and manufacturing and supply chain efficiencies, partially offset by lower sales of regulatory credits. Research and development (R&D) expenses for the three months ended June 30, 2013 were \$52.3 million, a decrease from \$74.9 million for the three months ended June 30, 2012. R&D expenses for the second quarter of 2012 included expenses related to our Model S pre-production activities, including manufacturing preparedness, process validation, prototype builds and extensive testing at both the vehicle and component levels; development of the Tesla Factory and testing of Model S. As Model S production in the Tesla Factory became fully operational in the second half of 2012, Model S related manufacturing costs, including direct parts, material and labor costs, manufacturing overhead and amortized tooling, and logistics, were no longer recorded as R&D expenses but instead were fully reflected in cost of automotive sales. R&D expenses for the second quarter of 2013 include continuing activities to homologate Model S for the rest of the world and ongoing research and development activities related to the Supercharger network and other programs.

During the three months ended June 30, 2013, we continued to expand our company-owned network of stores and service centers, primarily in the United States. With the higher expenses associated with the expansion of our store network and service infrastructure and the business in general, selling, general and administrative expenses were \$60.0 million for the three months ended June 30, 2013, compared to \$36.1 million for the three months ended June 30, 2012.

We ended the quarter with \$747.4 million in cash and cash equivalents, and current restricted cash, a significant increase from the end of the first quarter. We raised over \$1 billion during the three months ended June 30, 2013 through the issuance of \$660.0 million of 1.50% convertible senior notes as well as \$410.5 million of common stock. Approximately \$450 million of the offering proceeds were used to repay all of our outstanding Department of Energy (DOE) loan principal and interest, including a \$10.8 million early repayment fee.

[Table of Contents](#)

In May 2013, we issued \$660.0 million aggregate principal amount of 1.50% convertible senior notes due 2018 (Notes). The net proceeds from the offering, after deducting transaction costs, were approximately \$648.0 million. We incurred \$12.0 million of debt issuance costs in connection with the issuance of the Notes which we have recorded in other assets and are amortizing to interest expense using the effective interest method over the contractual term of the Notes. Under the terms of the Notes, 1.50% coupon interest per annum on the principal amount of the Notes is payable semi-annually in arrears on June 1 and December 1 of each year, commencing on December 1, 2013.

In connection with the offering of the Notes, we entered into convertible note hedge transactions whereby we have the option to purchase up to 5.3 million shares of our common stock at a price of approximately \$124.52 per share. The cost of the convertible note hedge transactions was \$177.5 million. In addition, we sold warrants whereby the holders of the warrants have the option to purchase up to approximately 5.3 million shares of our common stock at a price of \$184.48 per share. We received \$120.3 million in cash proceeds from the sale of these warrants. Taken together, the purchase of the convertible note hedges and the sale of warrants are intended to offset any actual dilution from the conversion of the Notes and to effectively increase the overall conversion price from \$124.52 to \$184.48 per share. For more information on the 1.50% convertible senior notes and call spread, see Note 6 to our Condensed Consolidated Financial Statements included under Part I, Item 1 of this Quarterly Report on Form 10-Q.

Concurrent with the execution of the Notes and related transactions, we also completed a public offering of common stock and sold a total of 3,902,862 shares of our common stock for total cash proceeds of approximately \$355.5 million (which includes 487,857 shares or \$45.0 million sold to Elon Musk, our Chief Executive Officer and cofounder (CEO)), net of underwriting discounts and offering costs. We also sold 596,272 shares of our common stock to our CEO and received total cash proceeds of \$55.0 million in a private placement at the public offering price.

We expect that our current sources of liquidity together with our current projections of cash flow from operating activities, will continue to provide us with adequate liquidity based on our current plans. However, if market conditions are favorable, we may evaluate alternatives to opportunistically pursue liquidity options.

Management Opportunities, Challenges and Risks

We have recently increased our production rate from 400 vehicles per week at the beginning of the second quarter to an average of 500 vehicles per week. We expect that this production level will allow us to achieve our goal of 21,000 Model S deliveries worldwide in 2013 and thereby significantly increase automotive sales.

Through June 30, 2013, we have delivered Model S vehicles solely to customers in North America. We started European deliveries of the Model S in August. We expect average selling price to rise significantly during the third quarter of 2013 due to the delivery of European Signature Series vehicles, and a higher mix of 85 kWh cars and other options. Although we have gained experience with the delivery process in North America in volume and will continue to enhance our processes, we have not delivered Model S vehicles outside of North America and thus may face difficulties meeting our delivery plans in both Europe and Asia, which may impact our ability to achieve our delivery goals.

In April 2013, we began offering a resale value guarantee to all customers who purchased a Model S in the United States and financed their vehicle through one of our specified commercial banking partners. Under the program, Model S customers have the option of selling their vehicle back to us

[Table of Contents](#)

during the period of 36 to 39 months after delivery for a pre-determined resale value. We account for transactions under the resale value guarantee program as operating leases and accordingly, we defer and amortize to automotive sales revenue the initial purchase consideration less resale value guarantee amount on a straight-line basis, over the contractual term of the guarantee program. Similarly, we capitalize and depreciate the cost of the respective operating lease vehicles less resale value guarantee amount to cost of automotive sales over the same period. If a customer decides not to sell their vehicle back to us by the end of the resale value guarantee term, any unamortized deferred revenue and operating lease vehicle net book value are then recognized in automotive sales and cost of automotive sales, respectively.

The resale value guarantee amount represents management's best estimate as to the resale value of the Model S vehicle and related vehicle options during the 36 to 39 month period after delivery which is currently approximately 50% of the base vehicle selling price and 43% of the price of any vehicle options. Since we are depreciating our operating lease vehicles to the resale value guarantee amount, we will adjust our depreciation estimates as needed, if the resale value is expected to decrease in future periods. As we accumulate more actual data related to the resale experience of Model S, we may be required to make significant changes to our estimates.

During the second quarter of 2013, we provided the resale value guarantee to over 30% of Model S deliveries and we expect the penetration rate to increase with the expansion of our financing programs in additional states in the United States and in international markets. Although our application of lease accounting to Model S deliveries with the resale value guarantee will not impact our cash flows and liquidity, since we receive the full amount of cash for the vehicle sales price at delivery, this program will adversely impact our 2013 revenues and operating results based on our current expectations of participation in such programs. Furthermore, while we do not assume any credit risk related to the customer, we are exposed to the risk that the vehicles' resale value may be lower than our estimates and the volume of vehicles returned to us may be higher than our estimates.

In addition to sales of Model S, we will continue to recognize automotive sales from our supply of powertrain systems to Toyota for the Toyota RAV4 EV. However, Toyota is not obligated to continue to purchase powertrain systems from us over an extended period of time.

In 2012, we began work on a full electric powertrain under the Mercedes-Benz B-Class EV program. Under this program, we will continue to provide development services and deliver prototype samples in 2013. Similar to our previous development services agreements, due to timing differences that may arise between the recognition of milestone revenues and the underlying costs of development services, the gross margin from our development services activities may vary from period to period.

During the second quarter of 2013, significant cost improvements were achieved, including part cost reductions, labor and overhead costs being allocated over higher production volume, as well as supply chain efficiencies. We expect these trends to continue as we execute on our roadmap of achieving further component cost reductions as well as continued manufacturing and logistics efficiencies. We expect our gross margin to continue to rise to our target of 25% in the fourth quarter of 2013, which assumes no ZEV credit revenue and continued efficiencies resulting from our cost reduction efforts and offering of new vehicle options. We may not be able to achieve the planned cost reductions from our various cost savings and process improvement initiatives, which would negatively affect our ability to reach our gross margin goals.

During the second quarter of 2013, we recognized \$51.5 million in ZEV credit sales, which contributed to our gross margin. ZEV credit revenue decreased by \$16.5 million from the first quarter of 2013 and should continue to decline very significantly in future quarters relative to our automotive sales as we grow our sales outside the United States. Other regulatory credit sales recognized during the second quarter of 2013 were \$17.9 million. While we will pursue opportunities to monetize ZEV credits we earn from the sales of our vehicles, we do not plan to rely on these sales to be a significant contributor to gross margin, and our business model is not predicated on such ZEV credits.

[Table of Contents](#)

In February 2012, we revealed an early prototype of the Model X crossover as the first vehicle we intend to develop by leveraging the Model S platform. We currently plan to start production of Model X in late 2014. Our ability to develop and introduce the Model X in this timeframe and cost efficiently is dependent upon our expectations of leveraging the Model S platform.

During the second quarter of 2013, we continued to expand our stores and service infrastructure. As of the end of the quarter, we had 41 stores and galleries around the world, and plan to open several more stores and galleries in 2013, including our first store in Beijing, China. We are continuing to expand our service infrastructure in order to expand our geographical presence as a way to increase sales and to provide better service in areas with a high concentration of Model S customers. We opened six service centers during the second quarter of 2013, for a total of 47 locations globally. We continue to build service infrastructure in advance of demand to ensure that after-sale services are available when and where needed.

At the end of May 2013, we announced the significant expansion of our Supercharger network as well as upcoming Supercharging technology that will reduce charging time at our Superchargers. Since the time of our announcement, we have been installing Superchargers at an accelerating pace. We may experience difficulties in finding suitable sites, negotiating leases or obtaining required permits for such locations, and our planned expansion of such Superchargers could be delayed or stalled.

Our research and development expenses are expected to increase significantly in the third quarter as we accelerate product development efforts on Model X, Model S right hand drive, and localization of Model S for international markets. Our selling, general and administrative expenses are also expected to increase, driven by the growth in our retail locations, service centers and Supercharger facilities.

In the second half of 2013, we plan to increase the number of worldwide retail, service and Supercharger locations. Additionally, based on growing demand for Model S, we plan to expand our production capacity. As a result, we expect to spend approximately \$150 million for remainder of 2013 on capital expenditures, including \$18.5 million we paid in July 2013 to purchase 31 acres of land adjacent to our Fremont factory for potential future expansion.

Critical Accounting Policies and Estimates

Our condensed consolidated financial statements are prepared in accordance with accounting principles generally accepted in the United States. The preparation of these condensed consolidated financial statements requires us to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues, costs and expenses and related disclosures. We base our estimates on historical experience, as appropriate, and on various other assumptions that we believe to be reasonable under the circumstances. Changes in the accounting estimates are reasonably likely to occur from period to period. Accordingly, actual results could differ significantly from the estimates made by our management. We evaluate our estimates and assumptions on an ongoing basis. To the extent that there are material differences between these estimates and actual results, our future financial statement presentation, financial condition, results of operations and cash flows will be affected.

[Table of Contents](#)

For a description of our critical accounting policies and estimates, please refer to the “Critical Accounting Policies and Estimates” section of our Management’s Discussion and Analysis of Financial Condition and Results of Operations contained in our Annual Report on Form 10-K for the year ended December 31, 2012, as filed with the Securities and Exchange Commission (SEC). In addition, please refer to Note 2, “Summary of Significant Accounting Policies,” to our Condensed Consolidated Financial Statements included under Part I, Item 1 of this Quarterly Report on Form 10-Q.

Results of Operations

The following table sets forth our condensed consolidated statements of operations data for the periods presented (in thousands):

	Three Months Ended June 30,		Six Months Ended June 30,	
	2013	2012	2013	2012
Revenues				
Automotive sales	\$401,535	\$ 22,054	\$956,738	\$ 41,299
Development services	3,604	4,599	10,193	15,521
Total revenues	405,139	26,653	966,931	56,820
Cost of revenues				
Automotive sales	303,599	20,150	765,417	34,082
Development services	1,057	1,741	4,711	7,766
Total cost of revenues	304,656	21,891	770,128	41,848
Gross profit	100,483	4,762	196,803	14,972
Operating expenses				
Research and development	52,312	74,854	107,171	143,245
Selling, general and administrative	59,963	36,083	107,008	66,665
Total operating expenses	112,275	110,937	214,179	209,910
Loss from operations	(11,792)	(106,175)	(17,376)	(194,938)
Interest income	39	74	49	164
Interest expense	(20,116)	(84)	(20,234)	(149)
Other income (expense), net	1,668	691	18,759	(385)
Loss before income taxes	(30,201)	(105,494)	(18,802)	(195,308)
Provision for income taxes	301	109	452	168
Net loss	<u>\$ (30,502)</u>	<u>\$ (105,603)</u>	<u>\$ (19,254)</u>	<u>\$ (195,476)</u>

Revenues

Automotive Sales

Automotive sales, which include vehicle, options and related sales, and powertrain component and related sales, consisted of the following for the periods presented (in thousands):

	Three Months Ended June 30,		Six Months Ended June 30,	
	2013	2012	2013	2012
Vehicle, options and related sales	\$388,270	\$16,465	\$929,053	\$34,353
Powertrain component and related sales	13,265	5,589	27,685	6,946
Total automotive sales	<u>\$401,535</u>	<u>\$22,054</u>	<u>\$956,738</u>	<u>\$41,299</u>

[Table of Contents](#)

Automotive sales during the three and six months ended June 30, 2013 were \$401.5 million and \$956.7 million, respectively, an increase from \$22.1 million and \$41.3 million during the three and six months ended June 30, 2012, respectively. Vehicle, options and related sales represent revenues related to deliveries of Model S and the Tesla Roadster, including vehicle options, accessories and destination charges, vehicle service and sales of regulatory credits to other automotive manufacturers. Powertrain component and related sales represent the sales of electric vehicle powertrain components and systems, such as battery packs and drive units, to other manufacturers.

Vehicle, options and related sales during the three and six months ended June 30, 2013 were \$388.3 million and \$929.1 million, respectively, an increase from \$16.5 million and \$34.4 million during the three and six months ended June 30, 2012, respectively. The increase in vehicle, options and related sales was primarily driven by Model S deliveries which commenced in June 2012, higher sales of regulatory credits including \$51.5 million and \$119.4 million in zero emission credit sales for the three and six months ended June 30, 2013, respectively, as well as powertrain component sales to Toyota for the Toyota RAV4 EV.

In April 2013, we began offering a resale value guarantee to all customers who purchased a Model S in the United States and financed their vehicle through one of our specified commercial banking partners. Under the program, Model S customers have the option of selling their vehicle back to us during the period of 36 to 39 months for a pre-determined resale value. We account for transactions under the resale value guarantee program as operating leases and accordingly, we defer and amortize to revenues the initial purchase consideration less resale value guarantee amount on a straight-line basis, over the contractual term of the guarantee program. If a customer decides not to sell their vehicle back to us by the end of the resale value guarantee term, any unamortized deferred revenue is then recognized in automotive sales. As of June 30, 2013, we recorded \$75.2 million in deferred revenues and \$72.4 million in other long-term liabilities related to Model S deliveries with the resale value guarantee. During the three and six months ended June 30, 2013, we recognized revenue of \$1.9 million in automotive sales related to this program.

Powertrain component and related sales for the three and six months ended June 30, 2013 were \$13.3 million and \$27.7 million, respectively, an increase from \$5.6 million and \$6.9 million during the three and six months ended June 30, 2012, respectively. During the three months ended March 31, 2012, we delivered only a limited number of powertrain components to Daimler as the production for both the Daimler Smart fortwo and A-Class EV programs was substantially completed as of December 31, 2011 and the sales of powertrain systems to Toyota under the RAV4 EV supply and services agreement commenced in March 2012. Powertrain component and related sales for the three and six months ended June 30, 2013 were related to powertrain component sales to Toyota for the Toyota RAV4 EV.

Development Services

Development services represent arrangements where we develop electric vehicle powertrain components and systems for other automobile manufacturers, including the design and development of battery packs, drive units and chargers to meet customers' specifications.

Development services revenue during the three and six months ended June 30, 2013 were \$3.6 million and \$10.2 million, respectively, a decrease from \$4.6 million and \$15.5 million during the three and six months ended June 30, 2012, respectively.

During the fourth quarter of 2012, we entered into a development agreement with Daimler to assist with the development of a full electric powertrain for a Mercedes-Benz B-Class EV vehicle. During the three and six months ended June 30, 2013, we recognized development services revenue of

[Table of Contents](#)

\$3.6 million and \$10.2 million for the achievement of various milestones and from the delivery of prototype samples to Daimler under this program. In the first half of 2012, we received two purchase orders from Daimler related to the development of a full electric powertrain for a Daimler Mercedes-Benz vehicle and recognized \$4.3 million in development services revenue during the three months ended June 30, 2012.

In October 2010, we entered into a Phase 1 contract services agreement with Toyota for the development of a validated powertrain system, including a battery, power electronics module, motor, gearbox and associated software, which would be integrated into an electric vehicle version of the Toyota RAV4. During the three months ended March 31, 2012, we completed our remaining milestones and delivered samples under the Phase 1 agreement and recognized \$10.7 million of development services revenue.

Cost of Revenues and Gross Profit

Cost of revenues includes cost of automotive sales and costs related to our development services.

Cost of automotive sales during the three and six months ended June 30, 2013 were \$303.6 million and \$765.4 million, respectively, an increase from \$20.2 million and \$34.1 million during the three and six months ended June 30, 2012, respectively. Cost of automotive sales includes direct parts, material and labor costs, manufacturing overhead, including amortized tooling costs, royalty fees, shipping and logistic costs and reserves for estimated warranty expenses. Cost of automotive sales also includes adjustments to warranty expense and charges to write down the carrying value of our inventory when it exceeds its estimated net realizable value and to provide for obsolete and on-hand inventory in excess of forecasted demand. The increase in cost of automotive sales was driven primarily by the commencement of Model S deliveries in June 2012 as well as electric powertrain component and systems sales to Toyota as we began to deliver under the Toyota RAV4 EV supply and services agreement.

In April 2013, we began offering a resale value guarantee to all customers who purchased a Model S and financed their vehicle and vehicle options through one of our specified commercial banking partners. Under the program, we capitalize the cost of Model S into operating lease vehicles and depreciate the respective operating lease vehicles less resale value guarantee amount to cost of automotive sales on a straight-line basis, over the contractual term of the guarantee program. If a customer decides not to sell their vehicle back to us by the end of the resale value guarantee term, the remaining operating lease vehicle net book value is then recognized in automotive sales. As of June 30, 2013, we recorded \$123.9 million in operating lease vehicles, net, related to Model S deliveries with the resale value guarantee. During the three and six months ended June 30, 2013, we recognized \$1.4 million in cost of automotive sales related to this program. Our warranty reserves do not include projected warranty costs associated with our resale value guarantee vehicles as such actual warranty costs are expensed as incurred. For the three months ended June 30, 2013, warranty costs incurred for our resale value guarantee vehicles were immaterial.

Gross profit during the three and six months ended June 30, 2013 were \$100.5 million and \$196.8 million, respectively, an increase from \$4.8 million and \$15.0 million during the three and six months ended June 30, 2012, respectively. These increases were driven primarily by the commencement of Model S deliveries in June 2012 and the sales of regulatory credits, which carry no associated cost of revenues, partially offset by lower sales of the Tesla Roadster.

In our efforts to make Model S available to a wider range of customers, we commenced delivery of cars equipped with the lower priced, 60 kWh battery pack during the first quarter of 2013. At the same time, due to lower than expected demand for Model S with the 40 kWh battery pack, we announced that the 40 kWh battery pack would not be produced. Since some customers had already configured their vehicles with the 40 kWh battery pack, we offered to deliver a vehicle with a 60 kWh battery pack that

[Table of Contents](#)

would be limited to 40 kWh by on-board firmware. During the second quarter of 2013, we delivered such vehicles to customers which had a slightly unfavorable impact on our gross margin. We have substantially completed the deliveries of these vehicles.

We expect our development services gross profit and gross margin may fluctuate in future periods as the timing of revenue recognition may not coincide with the period in which the corresponding cost of revenues is recognized.

Research and Development Expenses

Research and development (R&D) expenses consist primarily of personnel costs for our teams in engineering and research, supply chain, quality, manufacturing engineering and manufacturing test organizations, prototyping expense, contract and professional services and amortized equipment expense. Overhead costs related to the Tesla Factory prior to the start of production of Model S are also included in R&D expenses. Also included in R&D expenses are development services costs that we incur, if any, prior to the finalization of agreements with our development services customers as reaching a final agreement and revenue recognition is not assured. Development services costs incurred after the finalization of an agreement are recorded in cost of revenues.

Research and development expenses during the three months ended June 30, 2013 were \$52.3 million, a decrease from \$74.9 million during the three months ended June 30, 2012. The \$22.6 million decrease in R&D expenses consisted primarily of a \$9.2 million decrease in materials and prototyping expenses primarily to support our Model S release candidate builds and crash testing in 2012, a \$4.5 million decrease in costs related to Model S engineering, design and testing activities, a \$4.2 million decrease in employee compensation expenses, a \$4.1 million decrease in shipping charges for prototype materials and a \$1.5 million decrease in office, information technology and facilities-related costs. The decrease was partially offset by a \$1.7 million increase in stock-based compensation expense related to a larger number of outstanding equity awards due to additional headcount and generally an increasing common stock valuation applied to new grants.

Research and development expenses during the six months ended June 30, 2013 were \$107.2 million, a decrease from \$143.2 million during the six months ended June 30, 2012. The \$36.0 million decrease in R&D expenses consisted primarily of a \$20.5 million decrease in materials and prototyping expenses primarily to support our Model S release candidate builds and crash testing in 2012, an \$8.6 million decrease in costs related to Model S engineering, design and testing activities, a \$6.1 million decrease in office, information technology and facilities-related costs and a \$5.4 million decrease in shipping charges for prototype materials. The decrease was partially offset by a \$3.5 million increase in stock-based compensation expense related to a larger number of outstanding equity awards due to additional headcount and generally an increasing common stock valuation applied to new grants and a \$2.0 million increase in employee compensation expenses from higher headcount.

Selling, General and Administrative Expenses

Selling, general and administrative (SG&A) expenses consist primarily of personnel and facilities costs related to our Tesla stores, marketing, sales, executive, finance, human resources, information technology and legal organizations, as well as litigation settlements and fees for professional and contract services.

Selling, general and administrative expenses during the three months ended June 30, 2013 were \$60.0 million, an increase from \$36.1 million during the three months ended June 30, 2012. The \$23.9 million increase in our SG&A expenses consisted primarily of a \$10.5 million increase in employee compensation expenses related to higher sales and marketing headcount to support sales activities worldwide and higher general and administrative headcount to support the expansion of the business, a

[Table of Contents](#)

\$4.3 million increase in stock-based compensation expense related to a larger number of outstanding equity awards due to additional headcount and generally an increasing common stock valuation applied to new grants, a \$4.1 million increase in office, information technology and facilities-related costs to support the growth of our business and a \$3.9 million increase in professional and outside services costs.

Selling, general and administrative expenses during the six months ended June 30, 2013 were \$107.0 million, an increase from \$66.7 million during the six months ended June 30, 2012. The \$40.3 million increase in our SG&A expenses consisted primarily of a \$17.7 million increase in employee compensation expenses related to higher sales and marketing headcount to support sales activities worldwide and higher general and administrative headcount to support the expansion of the business, a \$10.7 million increase in office, information technology and facilities-related costs to support the growth of our business, a \$6.5 million increase in professional and outside services costs and a \$5.2 million increase in stock-based compensation expense related to a larger number of outstanding equity awards due to additional headcount and an increasing common stock valuation applied to new grants.

Interest Expense

Interest expense during the three and six months ended June 30, 2013 was \$20.1 million and \$20.2 million, respectively, an increase from \$0.1 million and \$0.1 million during the three and six months ended June 30, 2012, respectively. Historically, we incurred interest expense primarily from our loans under the DOE Loan Facility and capitalized interest to assets under construction related to significant asset construction. During the three and six months ended June 30, 2013, we capitalized \$0.4 million and \$2.5 million of interest expense to construction in progress, respectively. During the three and six months ended June 30, 2012, we capitalized \$1.9 million and \$3.5 million of interest expense to construction in progress, respectively.

In May 2013, we issued \$660.0 million aggregate principal amount of 1.50% convertible senior notes due 2018 (Notes). The net proceeds from the offering, after deducting transaction costs, were approximately \$648.0 million. We incurred \$12.0 million of debt issuance costs in connection with the issuance of the Notes which we have recorded in other assets and are amortizing to interest expense using the effective interest method over the contractual term of the Notes. Under the terms of the Notes, 1.50% coupon interest per annum on the principal amount of the Notes is payable semi-annually in arrears on June 1 and December 1 of each year, commencing on December 1, 2013. During the three months ended June 30, 2013, we recognized \$1.3 million of interest expense related to the amortization of debt issuance costs and accrued coupon interest.

In accordance with accounting guidance on embedded conversion features, we valued and bifurcated the conversion option associated with the Notes from the host debt instrument and recorded the conversion option of \$82.8 million in equity. The resulting debt discount on the Notes is being amortized to interest expense at an effective interest rate of 4.29% over the contractual term of the Notes. During the three and six months ended June 30, 2013, we recognized \$1.6 million of interest expense related to the amortization of the debt discount.

In May 2013, we used a portion of the Notes offering proceeds to repay our outstanding Department of Energy (DOE) loan principal of \$439.6 million, a \$10.8 million early repayment fee and accrued interest of \$1.4 million. As a result of the extinguishment of our loans, unamortized loan origination costs associated with the DOE Loan Facility of \$5.6 million was charged to interest expense. During the three and six months ended June 30, 2013, we recorded total interest expense of \$17.8 million related to the early repayment fee, accrued interest and the amortization of the remaining loan origination costs on the DOE Loan Facility.

[Table of Contents](#)

Other Income (Expense), Net

Other income (expense), net, consists primarily of the change in the fair value of our DOE common stock warrant liability and foreign exchange gains and losses related to our foreign currency-denominated assets and liabilities. We expect our foreign exchange gains and losses will vary depending upon movements in the underlying exchange rates. The DOE warrant had been carried at its estimated fair value with changes in its fair value continuing to be reflected in other expense, net.

Other income, net, during the three months ended June 30, 2013 was \$1.7 million, an increase in income compared to other income, net, of \$0.7 million during the three months ended June 30, 2012. The increase in other income, net, was primarily due to a favorable foreign currency exchange impact from our foreign currency-denominated liabilities, especially related to the Japanese yen.

Other income, net, during the six months ended June 30, 2013 was \$18.8 million, an increase in income compared to other expense, net, of \$0.4 million during the six months ended June 30, 2012. The increase in other income, net, was primarily due to the reduction in fair value of our DOE common stock warrant liability of \$10.7 million during the six months ended June 30, 2013. In March 2013, we entered into a fourth amendment to the DOE Loan Facility which, among other things, accelerated the maturity date of our DOE loans to December 15, 2017; therefore, the DOE warrant was no longer expected to vest. The increase in other income, net, was also attributable to a favorable foreign currency exchange impact from our foreign currency-denominated liabilities, especially related to the Japanese yen.

Provision for Income Taxes

Our provision for income taxes during the three and six months ended June 30, 2013 were \$0.3 million and \$0.5 million, respectively, compared to \$0.1 million and \$0.2 million during the three and six months ended June 30, 2012, respectively. The increase during the three and six months ended June 30, 2013 was due primarily to the increase in taxable income in our international jurisdictions.

Liquidity and Capital Resources

Since inception and through June 30, 2013, we had accumulated net operating losses of \$1.08 billion and have used \$698.8 million of cash in operations. As of June 30, 2013, we had \$746.1 million in principal sources of liquidity available from our cash and cash equivalents including \$581.2 million of money market funds.

Other sources of cash include cash from our deliveries of Model S, customer deposits for Model S and Model X, sales of regulatory credits, cash from the provision of development services, sales of powertrain components and systems. We expect that our current sources of liquidity, including cash, cash equivalents, together with our current projections of cash flow from operating activities, will continue to provide us with adequate liquidity based on our current plans. These capital sources will enable us to fund our ongoing operations, continue research and development projects, including those for our planned Model X crossover and future products, establish and expand our stores, service centers and Supercharger network and to make the investments in tooling and manufacturing capital required to introduce Model X. If market conditions are favorable, we may evaluate alternatives to opportunistically pursue liquidity options.

Also, should prevailing economic conditions and/or financial, business or other factors adversely affect the estimates of our future cash requirements, we could be required to fund our cash requirements through additional or alternative sources of financing. We cannot be certain that additional funds will be available to us on favorable terms when required, or at all.

1.50% Convertible Senior Notes and Call Spread

In May 2013, we issued \$660.0 million aggregate principal amount of 1.50% convertible senior notes due 2018 (Notes) in a public offering. The net proceeds from the offering, after deducting transaction costs, were approximately \$648.0 million. We incurred \$12.0 million of debt issuance costs in connection with the issuance of the Notes which we have recorded in other assets and are amortizing to interest expense using the effective interest method over the contractual term of the Notes. The interest under the Notes is fixed at 1.50% per annum and is payable semi-annually in arrears on June 1 and December 1 of each year, commencing on December 1, 2013.

Each \$1,000 of principal of the Notes will initially be convertible into 8.0306 shares of our common stock, which is equivalent to an initial conversion price of approximately \$124.52 per share, subject to adjustment upon the occurrence of specified events. Holders of the Notes may convert their Notes at their option on or after March 1, 2018. Further, holders of the Notes may convert their Notes at their option prior to March 1, 2018, only under the following circumstances: (1) during any fiscal quarter beginning after the fiscal quarter ending September 30, 2013, if the last reported sale price of our common stock for at least 20 trading days (whether or not consecutive) during the last 30 consecutive trading days of the immediately preceding fiscal quarter is greater than or equal to 130% of the conversion price on each applicable trading day; (2) during the five business day period following any five consecutive trading day period in which the trading price for the Notes is less than 98% of the average of the closing sale price of our common stock for each day during such five trading day period; (3) if we make specified distributions to holders of our common stock or if specified corporate transactions occur. Upon conversion, we would pay the holders the cash and, if applicable, shares of our common stock (subject to our right to deliver cash in lieu of all or a portion of such shares of our common stock) based on a daily conversion value, as defined. As of June 30, 2013, none of the conditions allowing holders of the Notes to convert have been met. If a fundamental change occurs prior to the maturity date, holders of the Notes may require us to repurchase all or a portion of their Notes for cash at a repurchase price equal to 100% of the principal amount of the Notes to be repurchased, plus any accrued and unpaid interest. In addition, if specific corporate events occur prior to the maturity date, we will increase the conversion rate for a holder who elects to convert its Notes in connection with such a corporate event in certain circumstances.

In connection with the offering of the Notes, we entered into convertible note hedge transactions whereby we have the option to purchase up to 5.3 million shares of our common stock at a price of approximately \$124.52 per share. The cost of the convertible note hedge transactions was \$177.5 million. In addition, we sold warrants whereby the holders of the warrants have the option to purchase up to approximately 5.3 million shares of our common stock at a price of \$184.48 per share. We received \$120.3 million in cash proceeds from the sale of these warrants. Taken together, the purchase of the convertible note hedges and the sale of warrants are intended to offset any actual dilution from the conversion of the Notes and to effectively increase the overall conversion price from \$124.52 to \$184.48 per share.

For more information on the Notes, see Note 6 to our Condensed Consolidated Financial Statements included in this Quarterly Report on Form 10-Q under Item 1. Financial Statements.

Common Stock Offering and Private Placement

Concurrent with the execution of the Notes and related transactions, we also completed a public offering of common stock and sold a total of 3,902,862 shares of our common stock for total cash proceeds of approximately \$355.5 million (which includes 487,857 shares or \$45.0 million sold to our CEO), net of underwriting discounts and offering costs. We also sold 596,272 shares of our common stock to our CEO and received total cash proceeds of \$55.0 million in a private placement at the public offering price.

[Table of Contents](#)***DOE Loan Facility***

On January 20, 2010, we entered into a loan facility with the Federal Financing Bank (FFB), and the DOE, pursuant to the Advanced Technology Vehicles Manufacturing (ATVM) Incentive Program. We refer to the loan facility with the DOE as the DOE Loan Facility. Under the DOE Loan Facility, the FFB had made available to us two multi-draw term loan facilities in an aggregate principal amount of \$465.0 million. As of August 31, 2012, we had fully drawn down the aforementioned facilities.

All outstanding amounts under the DOE Loan Facility were repayable in quarterly installments, which commenced on December 15, 2012 and were fully due by December 15, 2017. On May 22, 2013, in connection with the closing of our offerings of common stock and Notes, we paid \$451.8 million to settle all outstanding loan amounts of \$441.0 million, including principal and interest, as well as an early repayment fee of \$10.8 million.

Under the DOE Loan Facility, we had agreed to pre-fund a dedicated debt service reserve account with our planned loan repayments as required by the DOE loan facility. Upon termination of the DOE Loan Facility, \$29.3 million held in this dedicated account was released by the DOE.

Summary of Cash Flows

	Six Months Ended June 30,	
	2013	2012
	(in thousands)	
Net cash provided by (used in) operating activities	\$ 25,886	\$(127,564)
Net cash used in investing activities	(82,410)	(82,159)
Net cash provided by financing activities	600,691	165,011

In conjunction with our Annual Report on Form 10-K (10-K) for the year ended December 31, 2012 filed with the Securities and Exchange Commission (SEC) on March 7, 2013, we restated the unaudited statement of cash flows for the six months ended June 30, 2012. Amounts related to purchases of property and equipment during the period that were not paid as of June 30, 2012 were erroneously included as cash outflows from investing activities in our previously issued financial statements. This correction resulted in a \$16.5 million decrease in purchases of property and equipment included in cash flows used in investing activities and a corresponding increase in the change in accounts payable resulting in an increase in cash flows used in operating activities. There was no impact on our previously reported total cash and cash equivalents, condensed consolidated balance sheet or condensed consolidated statement of operations.

Cash Flows from Operating Activities

Our cash flows from operating activities are significantly affected by our cash investments to support the growth of our business in areas such as manufacturing, research and development and selling, general and administrative. Our operating cash flows are also affected by our working capital needs to support growth and fluctuations in inventory, personnel related expenditures, accounts payable and other current assets and liabilities.

[Table of Contents](#)

Net cash provided by operating activities was \$25.9 million during the six months ended June 30, 2013 net of adjustments for non-cash items such as depreciation and amortization of \$40.0 million, \$34.6 million related to stock-based compensation expense, \$5.6 million related to the amortization of all remaining DOE loan origination costs as a result of the repayment of our outstanding loans under the DOE Loan Facility, inventory write-downs of \$5.6 million and \$1.6 million related to the amortization of debt discount on our Notes, partially offset by other income associated with the reduction in fair value of the DOE common stock warrant liability of \$10.7 million. Significant operating cash inflows were comprised primarily of automotive sales of \$956.7 million, a \$147.6 million net increase in deferred revenue and other long-term liabilities associated with Model S deliveries with the resale value guarantee, \$10.2 million of development services revenue and a \$5.1 million net increase in customer deposits, partially offset by an \$86.7 million increase in accounts receivable due to the regulatory credit sales recognized at the end of the second quarter and receivables from our financing partners. Significant operating cash outflows for the six months ended June 30, 2013 were primarily related to \$770.1 million of cost of revenues, \$214.2 million of operating expenses, a \$129.2 million increase in inventory and operating lease vehicles and a \$3.4 million increase in prepaid expenses and other current assets, partially offset by an \$8.5 million increase in accounts payable and accrued liabilities primarily due to the timing of vendor payments.

Net cash used in operating activities was \$127.6 million during the six months ended June 30, 2012. The largest component of our cash used during this period related to our net loss of \$195.5 million, which included non-cash charges of \$23.3 million related to stock-based compensation expense, \$8.5 million related to depreciation and amortization and \$3.7 million related to inventory write-downs and adverse purchase commitments. Significant operating cash outflows were primarily related to \$209.9 million of operating expenses, \$41.8 million of cost of revenues and an \$18.4 million increase in inventory and operating lease vehicles, partially offset by a \$6.4 million increase in accounts payable and accrued liabilities and a \$2.6 million decrease in prepaid expenses and other current assets. Inventory increased to meet our planned production requirements for the Model S and powertrain component sales while the net increase in accounts payable and accrued liabilities was due to both the growth of our business and the timing of vendor payments. The decrease in prepaid expenses and other current assets was primarily driven by various tax refunds received during the six months ended June 30, 2012. Significant operating cash inflows for the six months ended June 30, 2012 were comprised primarily of a \$41.7 million net increase in customer deposits, automotive sales of \$41.3 million and \$15.5 million of development services revenue, partially offset by a \$1.5 million increase in accounts receivable. The increase in accounts receivable was related to the development services provided under the Daimler Mercedes-Benz development services agreement as well as sales of powertrain systems to Toyota and Daimler.

Cash Flows from Investing Activities

Cash flows from investing activities primarily relate to capital expenditures to support our growth in operations, including investments in Model S manufacturing, as well as restricted cash that we were required to maintain in relation to our DOE Loan Facility, facility lease agreements, equipment financing, and certain vendor credit policies. We currently expect our capital expenditures for the second half of 2013 to be approximately \$150 million, primarily driven by expenditures related to the expansion of our service, store and Supercharger network, investing in new capital equipment and tooling to increase production, reduce variable costs and new product development.

Net cash used in investing activities was \$82.4 million during the six months ended June 30, 2013 primarily related to \$98.2 million in purchases of capital equipment and tooling and a transfer of \$14.5 million into our dedicated DOE accounts in accordance with the provisions of the DOE Loan Facility, partially offset by a \$29.3 million net transfer out of our dedicated DOE account as a result of the termination of our DOE Loan Facility and a \$1.1 million decrease in restricted cash.

[Table of Contents](#)

Net cash used in investing activities was \$82.2 million during the six months ended June 30, 2012 primarily related to \$112.8 million in purchases of capital equipment and tooling, partially offset by a \$25.0 million in maturities of short-term marketable securities and an \$8.2 million of net transfers out of our dedicated DOE account in accordance with the provisions of the DOE Loan.

Cash Flows from Financing Activities

Net cash provided by financing activities was \$600.7 million during the six months ended June 30, 2013 and was comprised primarily of \$660.0 million from our Notes offering in May 2013, \$415.0 million received from our public offering of common stock and concurrent private placement completed in May 2013, \$120.3 million from the sale of warrants as part of our call spread transactions executed in May 2013, and \$55.1 million received from the exercise of common stock options by employees and the purchase of common stock under our employee stock purchase plan; partially offset by \$452.3 million related to our repayment of all outstanding loan principal under the DOE Loan Facility, \$177.5 million related to the purchase of convertible note hedges as part of our call spread transactions executed in May 2013, \$16.2 million of Notes and common stock issuance costs, \$12.7 million related to our planned quarterly repayment of loan principal under the DOE Loan Facility and \$3.6 million related to principal payments on our capital leases.

Net cash provided by financing activities was \$165.0 million during the six months ended June 30, 2012 and was comprised primarily of \$155.5 million received from our draw-downs under the DOE Loan Facility and \$10.4 million received from the exercise of common stock options by employees and the purchase of common stock under our employee stock purchase plan.

Contractual Obligations

The following table sets forth, as of June 30, 2013, our cash obligations related to our Notes that will affect our future liquidity (in thousands) for the following periods:

	Year Ended December 31,						
	Total	2013	2014	2015	2016	2017	2018
Convertible senior notes	709,858	5,308	9,900	9,900	9,900	9,900	664,950

On May 22, 2013, we paid \$451.8 million to settle all outstanding loan amounts of \$441.0 million under our DOE Loan Facility, including principal and interest, as well as an early repayment fee of \$10.8 million.

There have been no other material changes from our future contractual obligations as disclosed in our Annual Report on Form 10-K for the year ended December 31, 2012.

Off-Balance Sheet Arrangements

During the periods presented, we did not have any relationships with unconsolidated entities or financial partnerships, such as entities often referred to as structured finance or special purpose entities, which would have been established for the purpose of facilitating off-balance sheet arrangements or other contractually narrow or limited purposes.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Foreign Currency Risk

Our revenues and costs denominated in foreign currencies are not completely matched. We commenced deliveries of Model S in June 2012 and through June 30, 2013, we have delivered Model S vehicles solely to customers in North America. Through June 30, 2013, a significant majority of our revenues have been denominated in U.S. dollars. However, a portion of our costs and expenses during the three months ended June 30, 2013 was denominated in foreign currencies, including the Japanese yen, euro and British pound. Accordingly, when the value of the U.S. dollar has depreciated against these currencies, our costs as measured in U.S. dollars as a percent of our revenues have correspondingly increased which adversely impacted our operating results. We started European deliveries of the Model S in August 2013 and plan to start Asian deliveries later in 2013. As we continue to launch Model S overseas, we may have greater revenues than costs denominated in other currencies, in which case a strengthening of the dollar would tend to reduce our revenues as measured in U.S. dollars.

As a result of a favorable foreign currency exchange impact from foreign currency-denominated liabilities, especially related to the Japanese yen, we recorded gains on foreign exchange transactions in other income (expense), net, for the three months ended June 30, 2013.

Interest Rate Risk

We had cash and cash equivalents totaling \$746.1 million as of June 30, 2013. A portion of our cash and cash equivalents was invested in money market funds. Cash and cash equivalents are held for working capital purposes. We do not enter into investments for trading or speculative purposes. We believe that we do not have any material exposure to changes in the fair value as a result of changes in interest rates due to the short term nature of our cash equivalents.

As of June 30, 2013, we had convertible senior notes for an aggregate principal amount of \$660.0 million and capital lease obligations of \$14.9 million, all of which are fixed rate instruments. Therefore, our results of operations are not subject to fluctuations in interest rates.

ITEM 4. CONTROLS AND PROCEDURES

Evaluation of Disclosure Controls and Procedures; Changes in Internal Control Over Financial Reporting

Our management, with the participation of our chief executive officer and chief financial officer, evaluated the effectiveness of our disclosure controls and procedures as of June 30, 2013. The term “disclosure controls and procedures,” as defined in Rules 13a-15(e) and 15d-15(e) under the Exchange Act, means controls and other procedures of a company that are designed to ensure that information required to be disclosed by a company in the reports that it files or submits under the Exchange Act is recorded, processed, summarized and reported, within the time periods specified in the SEC’s rules and forms. Disclosure controls and procedures include, without limitation, controls and procedures designed to ensure that information required to be disclosed by a company in the reports that it files or submits under the Exchange Act is accumulated and communicated to the company’s management, including its principal executive and principal financial officers, as appropriate to allow timely decisions regarding required disclosure. Based on the evaluation of our disclosure controls and procedures as of June 30, 2013, our chief executive officer and chief financial officer concluded that, as a result of a material weakness in internal control over financial reporting, as previously disclosed in our Annual Report on Form 10-K for the year ended December 31, 2012, our disclosure controls and procedures were not effective as of June 30, 2013.

[Table of Contents](#)*Previously Reported Material Weakness*

Our management concluded that our internal control over financial reporting was ineffective as of December 31, 2012 because a material weakness existed in our internal control over financial reporting related to the presentation and disclosure of non-cash capital expenditures in our consolidated statements of cash flows. A material weakness is a deficiency, or a combination of deficiencies, in internal control over financial reporting, such that there is a reasonable possibility that a material misstatement of our annual or interim financial statements will not be prevented or detected on a timely basis. Specifically, we did not design effective controls to determine and review the total unpaid amounts related to capital expenditures that should have been excluded from operating and investing activities in the cash flow statement and disclosed as non-cash items. In response to the material weakness in internal controls described above, during the three months ended March 31, 2013, we began to include as part of our financial reporting review process, the determination of total unpaid amounts related to capital expenditures that should be excluded from investing activities in the consolidated statement of cash flows and disclosed as non-cash items. We believe that our improved processes and procedures will assist in the remediation of the material weakness. Once placed in operation for a sufficient period of time, we will subject these procedures to appropriate tests, in order to determine whether they are operating effectively.

Management recognizes that any controls and procedures, no matter how well designed and operated, can provide only reasonable assurance of achieving their objectives and management necessarily applies its judgment in evaluating the cost-benefit relationship of possible controls and procedures.

PART II OTHER INFORMATION**ITEM 1. LEGAL PROCEEDINGS**

From time to time, we are subject to various legal proceedings that arise from the normal course of business activities. In addition, from time to time, third parties may assert intellectual property infringement claims against us in the form of letters and other forms of communication. If an unfavorable ruling were to occur, there exists the possibility of a material adverse impact on our results of operations, prospects, cash flows, financial position and brand.

ITEM 1A. RISK FACTORS

You should carefully consider the risks described below together with the other information set forth in this report, which could materially affect our business, financial condition and future results. The risks described below are not the only risks facing our company. Risks and uncertainties not currently known to us or that we currently deem to be immaterial also may materially adversely affect our business, financial condition and operating results.

Risks Related to Our Business and Industry

We may be unable to sustain our current level of production and deliveries of Model S or increase production and deliveries in line with our plans, both of which could harm our business and prospects.

We began manufacturing and delivering Model S in June 2012. We have limited experience to date in high volume manufacturing of our electric vehicles as we only recently reached full production of Model S for the U.S. market and have just begun production of Model S for the European market. Our ability to further ramp-up high volume Model S production will depend upon a number of factors, including our suppliers' ability to deliver quality parts to us in a timely manner, our ability to use our

[Table of Contents](#)

manufacturing processes as planned for volume production while maintaining our desired quality levels and efficiently making design changes to ensure consistently high quality. The Model S is an all new vehicle which we are producing with new employees using new equipment and therefore our production processes are still maturing. To produce a vehicle that meets our quality standards requires us to carefully analyze each step of our production plan, improve the efficiency of our manufacturing processes and continue to train our employees. Our suppliers also must produce new products in sufficient quantities and quality levels to meet our demand. Certain suppliers have experienced delays in meeting our demand or have sought to renegotiate the terms of the supply arrangements, and we continue to focus on supplier capabilities and constraints. Any disruption in maintaining our production level of Model S could materially damage our brand, business, prospects, financial condition and operating results.

We have only recently increased our Model S delivery rates in the United States to match our current and anticipated Model S production capacity. We have limited experience in the high volume delivery of our Model S vehicles as we have just recently exceeded a production rate of 500 vehicles produced per week and intend to increase the production rate in the near future. Furthermore, we have begun European deliveries of the Model S in August of this year and plan to start Asian deliveries later in 2013, but have limited experience delivering vehicles outside of the United States and thus may face difficulties meeting our delivery plans in both Europe and Asia. If we are unable to maintain our weekly delivery rate to match our production rate of Model S, ramp up deliveries in Europe and Asia and sustain a high level of weekly Model S deliveries throughout the year, this could result in negative publicity, damage our brand and have a material adverse effect on our business, prospects, financial condition and operating results.

In addition, for Model S we have introduced a number of new manufacturing technologies and techniques, such as aluminum spot welding systems, which have not been widely adopted in the automotive industry, and Model S has a number of new and unique design features, such as a 17 inch display screen, newly designed retractable exterior door handles and a panoramic roof, each of which poses unique manufacturing challenges. Model S production and deliveries will continue to require significant resources and we may experience unexpected delays or difficulties that could harm our ability to maintain full manufacturing capacity for Model S, or cause us to miss planned production targets, any of which could have a material adverse effect on our business, prospects, operating results and financial condition. Additionally, sustaining high volume production and doing so in a manner that avoids significant cost overruns, including as a result of factors beyond our control such as problems with suppliers and vendors, may be difficult.

Our ability to sustain volume production and deliveries for Model S is subject to certain risks and uncertainties, including:

- that our suppliers will be able and willing to deliver components in a timely basis and in the necessary quantities, quality and at acceptable prices to produce Model S in volume and reach our financial targets;
- that we will be able to complete any necessary adjustments to the vehicle design or manufacturing processes of Model S in a timely manner that meets our production plan and allows for high quality vehicles;
- that we will be able to commence and execute the launch and ramp of Model S in Europe and Asia pursuant to our current timeline;
- that we will be able to schedule and complete deliveries at our planned volume production;

Table of Contents

- that the equipment or tooling which we have purchased or which we select will be able to accurately manufacture the vehicle within specified design tolerances and will not suffer from unexpected breakdowns or damage which could negatively affect the rate needed to produce vehicles in volume;
- that we will be able to comply with environmental, workplace safety and similar regulations to operate our manufacturing facilities and our business on our projected timeline;
- that we will be able to maintain high quality controls as we transition to a higher level of in-house manufacturing process; and
- that the information technology systems that we are currently expanding and improving upon will be effective to manage high volume production.

Finally, detailed long-term testing of systems integration, performance and safety as well as long-term quality, reliability and durability testing, such as testing for three-phase charging in Europe, are ongoing and any negative results from such testing could cause production or delivery delays in Model S, cost increases or lower quality Model S vehicles.

We are dependent on our suppliers, the vast majority of which are single source suppliers, and the inability of these suppliers to continue to deliver, or their refusal to deliver, necessary components of our vehicles in a timely manner at prices, quality levels, and volumes acceptable to us would have a material adverse effect on our business, prospects and operating results.

Model S contains numerous purchased parts which we source globally from over 200 direct suppliers, the vast majority of whom are currently single source suppliers for these components. While we obtain components from multiple sources whenever possible, similar to other automobile manufacturers, the vast majority of the components used in our vehicles are purchased by us from single sources. To date we have not qualified alternative sources for most of the single sourced components used in our vehicles and we generally do not maintain long-term agreements with our suppliers.

While we believe that we may be able to establish alternate supply relationships and can obtain or engineer replacement components for our single source components, we may be unable to do so in the short term, or at all, at prices or costs that are favorable to us. In particular, while we believe that we will be able to secure alternate sources of supply for most of our single sourced components in a relatively short time frame, qualifying alternate suppliers or developing our own replacements for certain highly customized components of our vehicles may be time consuming, costly and may force us to make additional modifications to a vehicle's design.

This supply chain exposes us to multiple potential sources of delivery failure or component shortages for Model S, as well as for our powertrain component sales activities. For example, earthquakes similar to the one that occurred in Japan in March 2011 could negatively impact our supply chain. We have in the past experienced source disruptions in our supply chains, including those relating to our slower-than-anticipated ramp in our Model S production goals for 2012. We may experience additional delays in the future with respect to Model S and any other future vehicle we may produce. In addition, because we do not have written agreements in place with all of our suppliers, this may create uncertainty regarding certain suppliers' obligations to us, including but not limited to, those regarding warranty and product liability. Changes in business conditions, wars, governmental changes and other factors beyond our control or which we do not presently anticipate, could also affect our suppliers' ability to deliver components to us on a timely basis. Furthermore, if we experience significant increased demand, or need to replace certain existing suppliers, there can be no assurance that additional supplies of component parts will be available when required on terms that are favorable to us, at all, or that any supplier would allocate sufficient supplies to us in order to meet our requirements or fill our orders in a timely manner. In

[Table of Contents](#)

the past, we have replaced certain suppliers because of their failure to provide components that met our quality control standards. The loss of any single or limited source supplier or the disruption in the supply of components from these suppliers could lead to delays in vehicle deliveries to our customers, which could hurt our relationships with our customers and also materially adversely affect our business, prospects and operating results.

Changes in our supply chain have resulted in the past, and may result in the future, in increased cost and delay. We have also experienced cost increases from certain of our suppliers in order to meet our quality targets and development timelines as well as due to design changes that we made, and we may experience similar cost increases in the future. Additionally, we are negotiating with existing suppliers for cost reductions, seeking new and less expensive suppliers for certain parts, and attempting to redesign certain parts to make them cheaper to produce. If we are unsuccessful in our efforts to control and reduce supplier costs, our operating results will suffer. Additionally, cost reduction efforts may interrupt or harm our normal production processes, thereby harming Model S quality or reducing Model S production output.

Furthermore, a failure by our suppliers to provide the components in a timely manner or at the level of quality necessary to manufacture our performance electric vehicles such as Model S could prevent us from fulfilling customer orders in a timely fashion which could result in negative publicity, damage our brand and have a material adverse effect on our business, prospects, financial condition and operating results.

If we are unable to adequately reduce the manufacturing costs of Model S or otherwise control the costs associated with operating our business, our business, financial condition, operating results and prospects will suffer.

Our production costs for Model S were high initially due to start-up costs at the Tesla Factory, manufacturing inefficiencies including low absorption of fixed manufacturing costs, higher logistics costs due to the immaturity of our supply chain, and higher initial prices for component parts during the initial period after the launch and ramp of Model S. As we are now producing cars in excess of a production volume of approximately 500 vehicles per week, manufacturing costs have continued to fall. While we expect further cost reduction efforts undertaken by both us and our suppliers will continue to reduce costs during 2013, there is no guarantee that we will be able to achieve planned cost reductions from our various cost savings initiatives, and the failure to achieve such savings would negatively affect our ability to reach our gross margin and profitability goals.

We incur significant costs related to procuring the raw materials required to manufacture our high-performance electric cars, assembling vehicles and compensating our personnel. We may also incur substantial costs or cost overruns in increasing the production capability of Model S and powertrain manufacturing facilities, or unexpected costs or cost overruns associated with the launch of Model S in Europe, which we recently began, and the planned launch in Asia later in 2013. If Model S tooling, production equipment and parts are insufficient for use in Model X, perhaps as a result of a lower level of commonality between the two vehicles than we currently anticipate, our costs related to the production of Model X may exceed expectations.

Additionally, in the future we may be required to incur substantial marketing costs and expenses to promote our vehicles, including through the use of traditional media such as television, radio and print, even though our marketing expenses to date have been relatively limited as we have to date relied upon unconventional marketing efforts. If we are unable to keep our operating costs aligned with the level of revenues we generate, our operating results, business and prospects will be harmed. Furthermore, many of the factors that impact our operating costs are beyond our control. For example, the costs of our raw materials and components, such as lithium-ion battery cells or aluminum used to produce body panels,

[Table of Contents](#)

could increase due to shortages as global demand for these products increases. Indeed, if the popularity of electric vehicles exceeds current expectations without significant expansion in battery cell production capacity and advancements in battery cell technology, shortages could occur which would result in increased material costs to us or potentially limit our ability to expand production.

Our long-term success will be dependent upon our ability to design and achieve market acceptance of new vehicle models, specifically Model S and new vehicle models such as Model X and “Gen III,” in the U.S. and abroad.

Our long-term success is dependent on market acceptance of two new vehicles: the Model S sedan and the Model X crossover. In the United States, there is no guarantee that Model S will be successfully accepted by the general public in the long-term. As we enter into Europe and Asia, there is no guarantee that customers in these markets will embrace our vehicles and if they do not, demand for our vehicles could be lower than our expectations.

Additionally, there can be no assurance that we will be able to design future electric vehicles that will meet the expectations of our customers or that our future models, including Model X, will become commercially viable. To date, we have publicly revealed only an early prototype of the Model X. To the extent that we are not able to build Model X to the expectations created by the early prototype and our announced specifications, customers may cancel their reservations, our future sales could be harmed and investors may lose confidence in us. In addition, we have also announced our intent to develop a third generation electric vehicle (“Gen III”) which we expect to produce at the Tesla Factory after the introduction of Model X.

Furthermore, historically, automobile customers have come to expect new and improved vehicle models to be introduced frequently. In order to meet these expectations, we may in the future be required to introduce on a regular basis new vehicle models as well as enhanced versions of existing vehicle models. As technologies change in the future for automobiles in general and performance electric vehicles specifically, we will be expected to upgrade or adapt our vehicles and introduce new models in order to continue to provide vehicles with the latest technology and meet customer expectations. To date, we have limited experience simultaneously designing, testing, manufacturing, upgrading, adapting and selling our electric vehicles.

Our future growth is dependent upon consumers’ willingness to adopt electric vehicles.

Our growth is highly dependent upon the adoption by consumers of, and we are subject to an elevated risk of any reduced demand for, alternative fuel vehicles in general and electric vehicles in particular. If the market for electric vehicles in the U.S. and abroad does not develop as we expect or develops more slowly than we expect, our business, prospects, financial condition and operating results will be harmed. The market for alternative fuel vehicles is relatively new, rapidly evolving, characterized by rapidly changing technologies, price competition, additional competitors, evolving government regulation and industry standards, frequent new vehicle announcements and changing consumer demands and behaviors.

Other factors that may influence the adoption of alternative fuel vehicles, and specifically electric vehicles, include:

- perceptions about electric vehicle quality, safety (in particular with respect to lithium-ion battery packs), design, performance and cost, especially if adverse events or accidents occur that are linked to the quality or safety of electric vehicles, such as those related to the Chevrolet Volt battery pack fires;

[Table of Contents](#)

- perceptions about vehicle safety in general, in particular safety issues that may be attributed to the use of advanced technology, including vehicle electronics and regenerative braking systems;
- negative perceptions of electric vehicles, such as that they are more expensive than non-electric vehicles and are only affordable with government subsidies;
- the limited range over which electric vehicles may be driven on a single battery charge and the effects of weather on this range;
- the decline of an electric vehicle's range resulting from deterioration over time in the battery's ability to hold a charge;
- varied calculations for driving ranges achievable by EVs;
- our capability to rapidly swap out the Model S battery pack and the development of specialized public facilities to perform such swapping
- concerns about electric grid capacity and reliability, which could derail our past and present efforts to promote electric vehicles as a practical solution to vehicles which require gasoline;
- concerns by potential customers that if their battery pack is not charged properly, it may become unusable and may need to be replaced;
- the availability of alternative fuel vehicles, including plug-in hybrid electric vehicles;
- improvements in the fuel economy of the internal combustion engine;
- the availability of service for electric vehicles;
- consumers' desire and ability to purchase a luxury automobile or one that is perceived as exclusive;
- the environmental consciousness of consumers;
- volatility in the cost of oil and gasoline;
- consumers' perceptions of the dependency of the United States on oil from unstable or hostile countries;
- government regulations and economic incentives promoting fuel efficiency and alternate forms of energy;
- access to charging stations, standardization of electric vehicle charging systems and consumers' perceptions about convenience and cost to charge an electric vehicle;
- the availability of tax and other governmental incentives to purchase and operate electric vehicles or future regulation requiring increased use of nonpolluting vehicles;
- perceptions about and the actual cost of alternative fuel; and
- macroeconomic factors.

[Table of Contents](#)

In addition, reports have suggested the potential for extreme temperatures to affect the range or performance of electric vehicles. Based on internal testing, we estimate that our Tesla Roadster, for example, would have a 5-10% reduction in range when operated in -20°C temperatures. To the extent customers have concerns about such reductions or third party reports which suggest reductions in range greater than our estimates gain widespread acceptance, our ability to market and sell our vehicles, particularly in colder climates, may be adversely impacted.

Additionally, we will become subject to regulations that require us to alter the design of our vehicles, which could negatively impact consumer interest in our vehicles. For example, our electric vehicles make less noise than internal combustion vehicles. Due to concerns about overly quiet vehicles and vision impaired pedestrians, in January 2011, Congress passed and the President signed the Pedestrian Safety Enhancement Act of 2010. The new law requires NHTSA to establish minimum sounds for electric vehicles and hybrid electric vehicles when travelling at low speeds. NHTSA plans to finalize a rule in 2013 with an effective date that could be implemented as soon as September 1, 2014. This will begin a three year phase-in schedule for establishing these minimum sounds in all electric and hybrid electric vehicles. Adding this artificial noise may cause current or potential customers not to purchase our electric vehicles, which would materially adversely affect our business, operating results, financial condition and prospects.

Our limited operating history makes evaluating our business and future prospects difficult.

As a company with a limited operating history, we face certain risks and difficulties. If we do not successfully address these risks, our business, prospects, operating results and financial condition will be materially and adversely harmed. We were formed in July 2003 and began delivering our first vehicle, the Tesla Roadster, in early 2008. We only began producing our second electric vehicle, Model S, in June 2012 and our production processes continue to mature, especially those production processes related to our Model S deliveries in Europe and our planned deliveries in Asia.

We have historically derived our revenues principally from sales of the Tesla Roadster and from electric powertrain development services and sales. Model S became the primary contributor to our revenue starting in the fourth quarter of 2012. We intend in the longer term to derive substantial revenues from the sales of Model S, Model X, Gen III and future electric vehicles. We have only a very limited operating history with respect to Model S. While we expect Model S cost reduction efforts undertaken by both us and our suppliers will continue to reduce the costs of manufacturing Model S during 2013, the success and timing of such efforts is difficult to predict, which limits our ability to precisely forecast the cost of producing Model S. Further, we have only produced an early prototype of the Model X crossover and have not yet started production of Model S for Asia, and are still in the process of completing homologation of Model S for Asia. Our vehicle design and our engineering, manufacturing and component supply plans for Model S may continue to be adjusted.

In addition, our powertrain component sales, development services revenue and powertrain research and development compensation have been almost entirely generated under arrangements with Daimler AG (Daimler) and Toyota Motor Corporation (Toyota), and there is no guarantee that we will be able to enter into future agreements with these companies on favorable terms. It is difficult to predict our future revenues and appropriately budget for our expenses, and we have limited insight into trends that may emerge and affect our business. In the event that actual results differ from our estimates or we adjust our estimates in future periods, our operating results and financial position could be materially affected.

We may fail to meet our publicly announced guidance or other expectations about our business, which would cause our stock price to decline.

We provide guidance regarding our expected financial and business performance including our projections regarding the number of vehicles we hope to sell in future periods and our anticipated future

[Table of Contents](#)

revenues and gross margins. Correctly identifying the key factors affecting business conditions and predicting future events is inherently an uncertain process. Our guidance is based in part on assumptions which include, but are not limited to, assumptions regarding:

- our ability to achieve anticipated production and sales volumes and projected average sales prices for Model S in the U.S. and abroad;
- supplier and commodity-related costs;
- planned cost reductions; and
- our ability to recognize revenue from Toyota and Daimler and from selling regulatory credits to other automobile manufacturers.

Such guidance may not always be accurate or may vary from actual results due to our inability to meet our assumptions and the impact on our financial performance that could occur as a result of the various risks and uncertainties to our business as set forth in these risk factors. We offer no assurance that such guidance will ultimately be accurate, and investors should treat any such guidance with appropriate caution. If we fail to meet our guidance or if we find it necessary to revise such guidance, even if such failure or revision is seemingly insignificant, investors and analysts may lose confidence in us and the market value of our common stock could be materially adversely affected.

We may be unable to sell additional regulatory credits, such as zero emission vehicle (ZEV), greenhouse gas emission (GHG) and corporate average fuel economy (CAFE) credits, to other automobile manufacturers, which would negatively impact our revenues, margins and our ability to reach profitability.

Our revenues to date have included amounts we receive from selling certain regulatory credits such as ZEV, GHG and CAFE credits to other automobile manufacturers. For example, in the first quarter of 2013 we earned significant revenues from selling ZEV and other regulatory credits, and we have sold substantially all of the ZEV credits saleable under our existing ZEV credit sale agreements. Revenue from the sale of ZEV credits in second quarter of 2013 was lower than the prior quarter. While we continue our efforts to sign agreements with a limited and shrinking pool of potential automobile manufacturing customers to sell them ZEV, GHG and other regulatory credits, we may not be able to enter into new agreements to sell any or all our available regulatory credits related to Model S, Model X or our other future vehicles, which would negatively impact our revenues and margins. Additionally, any inability to sell additional regulatory credits may negatively impact our ability to maintain profitability in the short term.

Our vehicles make use of lithium-ion battery cells, which have been observed to catch fire or vent smoke and flame, and such events have raised concerns, and future events may lead to additional concerns, about the batteries used in automotive applications.

The battery pack in the Tesla Roadster and Model S makes use of lithium-ion cells. We also currently intend to make use of lithium-ion cells in battery packs that we sell to Toyota and Daimler as well as any future vehicles we may produce. On rare occasions, lithium-ion cells can rapidly release the energy they contain by venting smoke and flames in a manner that can ignite nearby materials as well as other lithium-ion cells. Highly publicized incidents of laptop computers and cell phones bursting into flames have focused consumer attention on the safety of these cells. More recently, multiple Chevrolet Volt battery pack fires, followed by a government investigation into the cause of such fires focused considerable public attention, as well as the attention of NHTSA, on the safety of electric vehicles.

[Table of Contents](#)

These events have raised concerns about the batteries used in automotive applications. To address these questions and concerns, a number of cell manufacturers are pursuing alternative lithium-ion battery cell chemistries to improve safety. We have designed the battery pack to passively contain any single cell's release of energy without spreading to neighboring cells and we are not aware of any such incident in our customers' vehicles. However, we have delivered only a limited number of Tesla Roadsters and Model S sedans to customers and have limited field experience with our vehicles, especially Model S. We have also only delivered a limited number of battery packs to Toyota and Daimler. Accordingly, there can be no assurance that a field or testing failure of our Model S or other battery packs that we produce will not occur, which could damage the vehicle or lead to personal injury or death and may subject us to lawsuits. We may have to recall our vehicles or participate in a recall of a vehicle that contains our battery packs, and redesign our battery packs, which would be time consuming and expensive. Also, negative public perceptions regarding the suitability of lithium-ion cells for automotive applications or any future incident involving lithium-ion cells such as a vehicle or other fire, even if such incident does not involve us, could seriously harm our business.

In addition, we store a significant number of lithium-ion cells at our manufacturing facility. Any mishandling of battery cells may cause disruption to the operation of our facilities. While we have implemented safety procedures related to the handling of the cells, there can be no assurance that a safety issue or fire related to the cells would not disrupt our operations. Such damage or injury would likely lead to adverse publicity and potentially a safety recall. Moreover, any failure of a competitor's electric vehicle, especially those that use a high volume of commodity cells similar to the Tesla Roadster or Model S, may cause indirect adverse publicity for us and our electric vehicles. Such adverse publicity would negatively affect our brand and harm our business, prospects, financial condition and operating results.

If our vehicles or vehicles that contain our powertrains fail to perform as expected, or if we suffer product recalls for Model S, our ability to develop, market and sell our electric vehicles could be harmed.

Our vehicles, or vehicles that contain our powertrains such as the Toyota RAV4 EV or future Daimler vehicles, may contain defects in design and manufacture that may cause them not to perform as expected or that may require repair. For example, our vehicles use a substantial amount of software code to operate. Software products are inherently complex and often contain defects and errors when first introduced, and changes to software may have unexpected effects. Recent Model S issues experienced by customers include those related to the software for the 17 inch display screen, the retractable exterior door handles and the 12volt battery. Although we are attempting to remedy the Model S issues experienced by our customers in a rapid manner by expanding our service centers and personnel, such efforts may not be timely or up to the satisfaction of our customers.

While we have performed extensive internal testing, we currently have a limited frame of reference by which to evaluate the long-term performance of our battery packs, powertrains and vehicles. Specifically, we have only a limited amount of data by which to evaluate Model S, upon which our business prospects depend, due to the fact that we only recently began production in June 2012. There can be no assurance that we will be able to detect and fix any defects in the vehicles prior to their sale to consumers.

We experienced product recalls in May 2009, October 2010 and June 2013, all of which were unrelated to our electric powertrain. In May 2009, we initiated a product recall after we determined that a condition caused by insufficient torquing of the rear inner hub flange bolt existed in some of our Tesla Roadsters, as a result of a missed process during the manufacture of the Tesla Roadster glider, which is the partially assembled Tesla Roadster that does not contain our electric powertrain. In October 2010, we initiated a product recall after the 12 volt, low voltage auxiliary cable in a single vehicle chafed against

[Table of Contents](#)

the edge of a carbon fiber panel in the vehicle causing a short, smoke and possible fire behind the right front headlamp of the vehicle. In June 2013, we initiated a recall of slightly more than a thousand Model S vehicles to inspect and repair rear seat strikers that may have been compromised during the assembly process. Rear seat strikers are used to retain the rear seat backs in an upright position. Failure of this component may have resulted in collapse of the rear seat back during a crash. Although the cost of this recall was not material, and limited to a small number of total Model S's produced, we may experience additional recalls in the future, which could adversely affect our brand in our target markets and could adversely affect our business, prospects and results of operations.

Our electric vehicles may not perform consistent with customers' expectations or consistent with other vehicles currently available. For example, our electric vehicles may not have the durability or longevity of current vehicles, and may not be as easy to repair as other vehicles currently on the market. Additionally, while we have designed Model S with the intent to achieve an overall five star safety rating, NHTSA testing of these vehicles is not scheduled until later this year and may not produce the anticipated results. Any product defects or any other failure of our performance electric vehicles to perform as expected could harm our reputation and result in adverse publicity, lost revenue, delivery delays, product recalls, product liability claims, harm to our brand and reputation, and significant warranty and other expenses, and could have a material adverse impact on our business, financial condition, operating results and prospects.

We have a history of losses and have to deliver significant cost reductions to maintain profitability and long-term commercial success.

We have had net losses in each quarter since our inception, except for the first quarter of 2013. Even if we are able to successfully maintain our current Model S production levels, there can be no assurance that it will be commercially successful. In order to maintain profitability as well as long-term commercial success, we must continue to achieve our planned cost reductions and control our operational costs while producing quality Model S vehicles at volume, maintain our Model S delivery rates to match our current and anticipated Model S production capacity, maintain strong demand for Model S in the U.S., grow demand for Model S abroad, and achieve our planned cost reductions and control our operational costs. Failure to do one or more of these things could prevent us from reaching profitability.

The introduction of our residual value guarantee may result in lower revenues and profits and exposes us to resale risk to the extent many customers elect to return their vehicles to us and the residual values of these cars are below the guaranteed value.

We recently began offering a resale value guarantee to all customers who purchased a Model S in the United States and financed their vehicle through one of our specified commercial banking partners. Under the program, Model S customers have the option of selling their vehicle back to us during the period of 36 to 39 months for a pre-determined resale value. As a result of this residual value guarantee and customers having the option of selling their vehicles to us, we apply lease accounting to such purchases which would defer the recognition of the associated revenues over time instead of full recognition at vehicle delivery. During the second quarter of 2013, we provided the resale value guarantee to over 30% of Model S deliveries and we expect the penetration rate to increase with the expansion of our financing programs in additional states in the United States and in international markets. Although lease accounting will not impact our cash flows and liquidity, a significant uptake under this program could have a significant adverse impact on our near term revenues and operating results and our ability to achieve sustained profitability in the near term. Furthermore, while we do not assume any credit risk related to the customer, we are exposed to the risk that the vehicles' resale value may be lower than our estimates and the volume of vehicles returned to us may be higher than our estimates. Currently, there is only a very limited secondary market for our electric vehicles in particular, and electric vehicles in general, on which to base our estimates, and such a secondary market may not develop in the future. Our residual value and return volume estimates could prove to be incorrect, either of which could harm our financial condition and operating results.

Increases in costs, disruption of supply or shortage of raw materials, in particular lithium-ion cells, could harm our business.

We may experience increases in the cost or a sustained interruption in the supply or shortage of raw materials. Any such increase or supply interruption could materially negatively impact our business, prospects, financial condition and operating results. We use various raw materials in our business including aluminum, steel, nickel and copper. The prices for these raw materials fluctuate depending on market conditions and global demand for these materials and could adversely affect our business and operating results. For instance, we are exposed to multiple risks relating to lithium-ion cells. These risks include:

- the inability or unwillingness of current battery manufacturers to build or operate battery cell manufacturing plants to supply the numbers of lithium-ion cells required to support the growth of the electric or plug-in hybrid vehicle industry as demand for such cells increases;
- disruption in the supply of cells due to quality issues or recalls by battery cell manufacturers;
- an increase in the cost of raw materials, such as nickel used in lithium-ion cells, or aluminum used in the body of Model S; and
- fluctuations in the value of the Japanese yen against the U.S. dollar as our battery cell purchases are currently denominated in yen.

Our business is dependent on the continued supply of battery cells for our vehicles' battery packs as well as for the battery packs we produce for other automobile manufacturers. While we believe several sources of the battery cells are available for such battery packs, we have fully qualified only a limited number of suppliers for the cells used in such battery packs and have very limited flexibility in changing cell suppliers. Any disruption in the supply of battery cells from such vendors could disrupt production of Model S and of the battery packs we produce for other automobile manufacturers until such time as a different supplier is fully qualified. Furthermore, fluctuations or shortages in petroleum and other economic conditions may cause us to experience significant increases in freight charges and raw material costs. Substantial increases in the prices for our raw materials or prices charged to us, such as those charged by our battery cell manufacturers, would increase our operating costs, and could reduce our margins if we cannot recoup the increased costs through increased electric vehicle prices. There can be no assurance that we will be able to recoup increasing costs of raw materials by increasing vehicle prices. Any attempts to increase Model S prices in response to increased raw material costs could be viewed negatively by our customers, result in cancellations of Model S reservations and could materially adversely affect our brand, image, business, prospects and operating results.

Our success could be harmed by negative publicity regarding our company or our products, particularly Model S.

From time to time, our vehicles are evaluated by third parties. For example, the show Top Gear which airs on the British Broadcasting Corporation did a review of the Tesla Roadster in 2008. Top Gear is one of the most watched automotive shows in the world with an estimated 350 million viewers worldwide and is broadcast in over 100 countries. Since originally airing in the fall of 2008, the episode about the Tesla Roadster has been rebroadcast repeatedly around the world. The review of the Tesla Roadster included a number of significant falsehoods regarding the car's performance, range and safety. Such criticisms create a negative public perception about the Tesla Roadster, and to the extent that these

[Table of Contents](#)

comments are believed by the public, may cause current or potential customers not to purchase our electric vehicles such as Model S or Model X, which would materially adversely affect our business, operating results, financial condition and prospects.

Most recently, the New York Times published a review of the Model S and our Supercharger network on a route from Washington, D.C. to Boston. Despite instructions to the contrary, the reporter did not follow all recommendations, including failing to fully recharge the vehicle at one of the two Supercharger locations along the route. As a result, the Model S failed to complete the journey under its own power and the NY Times reporter published a negative review. While there were subsequent corrections by the NY Times Public Editor regarding the reporter's failure to conform to all Tesla recommendations, as well as problems with "precision and judgment," the original story still created a negative public perception about Model S, its capabilities and the Supercharger network. Such comments can and did negatively impact sales in that region. In addition, citation to the original NY Times article still continues. To the extent that these comments are believed by the public, this may cause current or potential customers not to purchase our electric vehicles, including Model S and Model X, which can materially adversely affect our business, operating results, financial conditions and prospects.

We are currently expanding and improving our information technology systems. If these implementations are not successful, our business and operations could be disrupted and our operating results could be harmed.

We are currently expanding and improving our information technology systems, including implementing new internally developed systems, to assist us in the management of our business. In particular, our volume production of Model S in the U.S. and abroad necessitates continued development, maintenance and improvement of our information technology systems which include product data management, procurement, inventory management, production planning and execution, sales and logistics, dealer management, financial and regulatory compliance systems. These systems support our operations and enable us to produce Model S in volume. The implementation, maintenance and improvement of these systems require significant management time, support and cost. Moreover, there are inherent risks associated with developing, improving and expanding our core systems as well as implementing new systems, including the disruption of our data management, procurement processes, manufacturing execution, finance, supply chain and sales and service processes that may affect our ability to manage our data and inventory, procure parts or supplies or manufacture, sell, deliver and service vehicles. We cannot be sure that these expanded systems or their required functionality will be fully or effectively implemented on a timely basis, if at all, or maintained. If we do not successfully implement, improve or maintain these systems, our operations may be disrupted and our operating results could be harmed. In addition, these systems or their functionality may not operate as we expect them to, and we may be required to expend significant resources to correct problems or find alternative sources for performing these functions.

Our distribution model is different from the predominant current distribution model for automobile manufacturers, which makes evaluating our business, operating results and future prospects difficult.

Our distribution model is not common in the automobile industry today, particularly in the United States. We plan to continue to sell our performance electric vehicles in company-owned Tesla stores and over the internet. This model of vehicle distribution is relatively new and unproven, especially in the United States, and subjects us to substantial risk as it requires, in the aggregate, a significant expenditure and provides for slower expansion of our distribution and sales systems than may be possible by utilizing a more traditional dealer franchise system. For example, we will not be able to utilize long-established sales channels developed through a franchise system to increase our sales volume, which may harm our business, prospects, financial condition and operating results. Moreover, we will be competing with companies with well-established distribution channels.

[Table of Contents](#)

We have opened Tesla stores in the United States, Europe and Japan, many of which have been open for only a short period of time. We have only limited experience distributing and selling our performance vehicles through our Tesla stores. Our success will depend in large part on our ability to effectively develop our own sales channels and marketing strategies. Implementing our business model is subject to numerous significant challenges, including obtaining permits and approvals from local and state authorities, and we may not be successful in addressing these challenges. In April 2011, we began the roll out of our new interactive store strategy. The concept and layout of these new stores, which are located in high profile retail centers, is different than what has previously been used in automotive sales. We do not know whether our new store strategy will be successful, if consumers will be willing to purchase vehicles in this manner or if these locations will be deemed to comply with applicable zoning restrictions as well as approval and acceptance from the specific high profile retail centers in which we seek to locate our stores. As a result, we may incur additional costs in order to improve or change our retail strategy.

Other aspects of our distribution model also differ from those used by traditional automobile manufacturers. For example, we do not anticipate that we will ever carry a significant amount of Model S inventory at our stores and customers may need to wait up to a few months from the time they place an order until the time they receive their vehicle. This type of custom manufacturing is unusual in the premium sedan market in the United States and it is unproven whether the average customer will be willing to wait this amount of time for such a vehicle. If customers do not embrace this ordering and retail experience, our business will be harmed.

We may face regulatory limitations on our ability to sell vehicles directly or over the internet which could materially and adversely affect our ability to sell our electric vehicles.

We sell our vehicles from our Tesla stores as well as over the internet. We may not be able to sell our vehicles through this sales model in each state in the United States as many states have laws that may be interpreted to prohibit internet sales by manufacturers to residents of the state or to impose other limitations on this sales model, including laws that prohibit manufacturers from selling vehicles directly to consumers without the use of an independent dealership or without a physical presence in the state. For example, some states provide that a manufacturer cannot deliver a vehicle to a resident of their state except through a dealer licensed to do business in such state, which may be interpreted to require us to open a store in that state in order to sell vehicles to their residents. In some states where we have opened a gallery, which is a location where potential customers can view our vehicles but is not a full retail location, it is possible that a state regulator could take the position that activities at our gallery constitute an unlicensed motor vehicle dealership and thereby violates applicable manufacturer-dealer laws. In addition, some states have requirements that service facilities be available with respect to vehicles sold in the state, which may be interpreted to also require that service facilities be available with respect to vehicles sold over the internet to residents of the state thereby limiting our ability to sell vehicles in states where we do not maintain service facilities.

The foregoing examples of state laws governing the sale of motor vehicles are just some of the regulations we will face as we sell our vehicles. In many states, the application of state motor vehicle laws to our specific sales model is largely untested under state motor vehicle industry laws, particularly with respect to sales over the internet, and would be determined by a fact specific analysis of numerous factors, including whether we have a physical presence or employees in the applicable state, whether we advertise or conduct other activities in the applicable state, how the sale transaction is structured, the volume of sales into the state, and whether the state in question prohibits manufacturers from acting as dealers. As a result of the fact specific and untested nature of these issues, and the fact that applying these laws intended for the traditional automobile distribution model to our sales model allows for some

[Table of Contents](#)

interpretation and discretion by the regulators, the manner in which the applicable authorities will apply their state laws to our distribution model is difficult to predict. Such laws, as well as other laws governing the motor vehicle industry, may subject us to potential inquiries and investigations from state motor vehicle regulators who may question whether our sales model complies with applicable state motor vehicle industry laws and who may require us to change our sales model or may prohibit our ability to sell our vehicles to residents in such states.

In addition, decisions by regulators permitting us to sell vehicles may be subject to challenges as to whether such decisions comply with applicable state motor vehicle industry laws. For example, in October 2012, vehicle dealer associations in New York and Massachusetts filed lawsuits to revoke the dealer license issued to Tesla Motors New York in New York and to limit the business activity of Tesla Motors MA, Inc. in Massachusetts. These lawsuits have been dismissed, reinforcing our continuing belief that state laws were not designed to prevent our distribution model. Possible similar challenges in other states, however, if successful, could restrict or prohibit our ability to sell our vehicles to residents in such states. In some states, there have also been legislative efforts by vehicle dealer associations to propose bills that, if enacted, would prevent us from obtaining dealer licenses in their states given our current sales model.

We are also registered as both a motor vehicle manufacturer and dealer in Canada, Australia, and Japan, and have obtained licenses to sell vehicles in other places such as Hong Kong. Furthermore, while we have performed an analysis of the principal laws in the European Union relating to our distribution model and believe we comply with such laws, we have not performed a complete analysis in all foreign jurisdictions in which we may sell vehicles. Accordingly, there may be laws in jurisdictions we have not yet entered or laws we are unaware of in jurisdictions we have entered that may restrict our vehicle reservation practices or other business practices. Even for those jurisdictions we have analyzed, the laws in this area can be complex, difficult to interpret and may change over time.

Regulatory limitations on our ability to sell vehicles could materially and adversely affect our ability to sell our electric vehicles.

Our deposits for Model S and reservations for Model X may be refundable to customers, and significant cancellations could harm our financial condition, business, prospects and operating results.

As of June 30, 2013, we had \$133.7 million in customer deposits, primarily for Model S and Model X. Model S deposits are generally subject to cancellation by the customer up until two weeks after placing the order. Model X deposits are fully refundable and subject to cancellation by customers. We have experienced order cancellations for our vehicles and have had to refund the related deposits, and cancellations may continue.

Given the lead times that we have historically experienced between customer reservation and delivery on the Tesla Roadster and on Model S and that we expect to experience on Model X, there is risk that customers that have placed orders or made reservations for our vehicles may cancel such orders or reservations and not ultimately take delivery on vehicles due to potential changes in customer preferences, competitive developments and other factors. For example, cancellations on Model S increased in 2012 and early 2013 when we asked numerous customers on the reservation list to configure their cars for delivery or risk losing their production slot and/or their 2012 pricing.

Additionally, if we encounter delays in the production ramp of Model S for Europe or our planned launch and ramp in Asia, or the introduction of Model X, we believe that a significant number of our customers could similarly cancel their orders or reservations and demand refunds of their deposits. As a result, no assurance can be made that orders and reservations will not be cancelled and will ultimately result in the final purchase, delivery, and sale of the vehicle.

We may not realize the benefits of our Supercharger network which could harm our business, brand and operating results.

We have only recently started to deploy Tesla Superchargers in the United States. Tesla Superchargers are a network of charging stations designed to provide fast-charge capability to owners of Model S vehicles equipped with Supercharger hardware. We intend to expand the Tesla Supercharger network throughout the U.S., Canada and Europe, but we may be unable to do so due to a number of factors, including the inability to secure, or delays in securing, suitable locations and permits, difficulties in interfacing with the infrastructures of various utility companies and greater than expected costs and difficulties of installing, maintaining and operating the network. We may also be unable to expand the Supercharger network as fast as we intend or as the public expects, or to place the charging stations in places our customers believe to be optimal. In addition, as we have announced that we will not be charging our customers to access this network, any significant unexpected costs that we encounter may harm our operating results. Although our Supercharger network is intended to address customer concerns regarding long-distance travel, this network may not result in increased reservations or sales of Model S or future vehicles. If our Supercharger network is not expanded as currently planned or as quickly as planned, we may not realize the benefits of our Supercharger network and our business and operating results could be materially affected.

If we are unable to design, develop, market and sell new electric vehicles that address additional market opportunities, our business, prospects and operating results will suffer.

We may not be able to successfully develop new electric vehicles, address new market segments or develop a significantly broader customer base. In 2012, we publicly revealed an early prototype of the Model X crossover as the first vehicle we intend to develop by leveraging the Model S platform. We have also announced our intent to develop a third generation electric vehicle based on a smaller platform than the Model S (“Gen III”) which we expect to produce at the Tesla Factory after the introduction of Model X. The Gen III is currently planned to be a lower cost, smaller sedan designed for the mass market. However, we have not yet finalized the design, engineering or component sourcing plans for Model X or Gen III and there are no assurances that we will be able to bring these vehicles to market at the price points and in the volumes as we currently intend, if at all. Our failure to address additional market opportunities would harm our business, prospects, financial condition and operating results.

If we are unable to effectively leverage the benefits of using an adaptable common platform architecture in the design and manufacture of future vehicles such as Model X, our business prospects, operating results and financial condition would be adversely affected.

We have designed Model S with an adaptable platform architecture and common electric powertrain so that we can use the platform of Model S to create future electric vehicles, including, as an example, our Model X crossover vehicle. However, we have no experience with using common platforms in the design and manufacture of our vehicles. The Model X design is not yet finalized and we may be unable to use the adaptable Model S platform to the extent we currently intend. Additionally, we intend to use some of our Model S manufacturing equipment and parts tooling for the production of Model X. If such tooling, production equipment and parts are insufficient for use in Model X, perhaps as a result of a lower level of commonality between the two vehicles than we anticipate, our costs related to the production of Model X may exceed expectations. There are no assurances that we will be able to use the Model S platform to bring future vehicle models, including the Model X crossover, to market faster or more inexpensively by leveraging use of this common platform or that there will be sufficient customer demand for any vehicles built on the Model S platform.

We may experience significant delays in the design, manufacture and launch of Model X which could harm our business and prospects.

We plan to start Model X production in late 2014. Any significant delay in the design, manufacture and launch of Model X could materially damage our brand, business, prospects, financial condition and operating results. Automobile manufacturers often experience delays in the design, manufacture and commercial release of new vehicle models. We experienced significant delays in launching the Tesla Roadster, which resulted in additional costs and adverse publicity for our business. In 2012, we also experienced delays in the ramp of Model S. We may experience similar delays, cost overruns and adverse publicity in launching Model X, any of which could be significant. We are in the initial design and development stages of Model X. Furthermore, we have not yet evaluated, qualified or selected all of our suppliers for the planned production of Model X. We may not be able to engage suppliers for the components in a timely manner, at an acceptable price or in the necessary quantities. We will also need to do extensive testing to ensure that Model X is in compliance with applicable NHTSA safety regulations and obtain EPA and CARB certification to emission regulations prior to beginning volume production and delivery of the vehicles. In addition, we have limited resources and, to the extent that such engineering and manufacturing resources are devoted to the design and production of Model S or are otherwise engaged such as in development services activities as they have been up until now, we may have difficulty designing and delivering Model X in a timely manner. If we are not able to manufacture and deliver Model X in a timely manner and consistent with our production timeline, budget and cost projections, our business, prospects, operating results and financial condition will be negatively impacted and our ability to grow our business will be harmed.

The automotive market is highly competitive, and we may not be successful in competing in this industry. We currently face competition from new and established competitors and expect to face competition from others in the future.

The worldwide automotive market, particularly for alternative fuel vehicles, is highly competitive today and we expect it will become even more so in the future. Other automobile manufacturers entered the electric vehicle market at the end of 2010 and we expect additional competitors to enter this market. With respect to Model S, we face competition from existing and future automobile manufacturers in the extremely competitive premium sedan market, including Audi, BMW, Lexus and Mercedes.

Many established and new automobile manufacturers have entered or have announced plans to enter the alternative fuel vehicle market. In Japan, Mitsubishi has been selling its electric iMiEV since April 2010. In December 2010, Nissan introduced in the United States the Nissan Leaf, a fully electric vehicle, in 2012 Ford introduced the pure electric Ford Focus and plug-in hybrid Ford C-Max Energi and Ford Fusion Energi, and BMW intends to introduce the pure electric BMW i3 in 2013. In addition, several manufacturers, including General Motors, Toyota, Ford, and Honda, are each selling hybrid vehicles, and certain of these manufacturers have announced plug-in versions of their hybrid vehicles. For example, in December 2010, General Motors introduced the Chevrolet Volt, which is a plug-in hybrid vehicle that operates purely on electric power for a limited number of miles, at which time an internal combustion engine engages to recharge the battery pack.

Moreover, it has been reported that many of the other large OEMs such as Daimler, Lexus, Audi, Renault and Volkswagen are also developing electric vehicles. Several new start-ups have also entered or announced plans to enter the market for performance electric vehicles. Finally, electric vehicles have already been brought to market in China and other foreign countries and we expect a number of those manufacturers to enter the United States market as well.

Most of our current and potential competitors have significantly greater financial, technical, manufacturing, marketing and other resources than we do and may be able to devote greater resources to the design, development, manufacturing, distribution, promotion, sale and support of their products.

[Table of Contents](#)

Virtually all of our competitors have more extensive customer bases and broader customer and industry relationships than we do. In addition, almost all of these companies have longer operating histories and greater name recognition than we do. Our competitors may be in a stronger position to respond quickly to new technologies and may be able to design, develop, market and sell their products more effectively. Additionally, we have not in the past, and do not currently, offer customary discounts on our vehicles like most of our competitors do.

We expect competition in our industry to intensify in the future in light of increased demand for alternative fuel vehicles, continuing globalization and consolidation in the worldwide automotive industry. Factors affecting competition include product quality and features, innovation and development time, pricing, reliability, safety, fuel economy, customer service and financing terms. Increased competition may lead to lower vehicle unit sales and increased inventory, which may result in a further downward price pressure and adversely affect our business, financial condition, operating results and prospects. Our ability to successfully compete in our industry will be fundamental to our future success in existing and new markets and our market share. There can be no assurances that we will be able to compete successfully in our markets. If our competitors introduce new cars or services that compete with or surpass the quality, price or performance of our cars or services, we may be unable to satisfy existing customers or attract new customers at the prices and levels that would allow us to generate attractive rates of return on our investment. Increased competition could result in price reductions and revenue shortfalls, loss of customers and loss of market share, which could harm our business, prospects, financial condition and operating results.

Demand in the automobile industry is highly volatile, which may lead to lower vehicle unit sales and adversely affect our operating results.

Volatility of demand in the automobile industry may materially and adversely affect our business, prospects, operating results and financial condition. The markets in which we currently compete and plan to compete in the future have been subject to considerable volatility in demand in recent periods. For example, according to automotive industry sources, sales of passenger vehicles in North America during the fourth quarter of 2008 were over 30% lower than those during the same period in the prior year. Demand for automobile sales depends to a large extent on general, economic, political and social conditions in a given market and the introduction of new vehicles and technologies. As a new automobile manufacturer and low volume producer, we have less financial resources than more established automobile manufacturers to withstand changes in the market and disruptions in demand. As our business grows, economic conditions and trends in other countries and regions where we sell our electric vehicles will impact our business, prospects and operating results as well. Demand for our electric vehicles may also be affected by factors directly impacting automobile price or the cost of purchasing and operating automobiles such as sales and financing incentives, prices of raw materials and parts and components, cost of fuel and governmental regulations, including tariffs, import regulation and other taxes. Volatility in demand may lead to lower vehicle unit sales and increased inventory, which may result in further downward price pressure and adversely affect our business, prospects, financial condition and operating results. These effects may have a more pronounced impact on our business given our relatively smaller scale and financial resources as compared to many incumbent automobile manufacturers.

Difficult economic conditions may negatively affect consumer purchases of luxury items, such as our performance electric vehicles.

Over the last few years, the continued challenging macroeconomic environment has negatively impacted consumer spending and we believe has adversely affected the sales of our vehicles. The automobile industry in particular was severely impacted by the poor economic conditions and several vehicle manufacturing companies, including General Motors and Chrysler, were forced to file for bankruptcy. Sales of new automobiles in our two primary markets of the United States and Europe

[Table of Contents](#)

generally have dropped during this recessionary period, and have not yet recovered in Europe. Sales of high-end and luxury consumer products, such as our performance electric vehicles, depend in part on discretionary consumer spending and are even more exposed to adverse changes in general economic conditions. Difficult economic conditions could therefore temporarily reduce the market for vehicles in our price range. Discretionary consumer spending also is affected by other factors, including changes in tax rates and tax credits, interest rates and the availability and terms of consumer credit.

If the current difficult economic conditions continue or worsen, we may experience a decline in the demand for Model S or future vehicles such as Model X or Gen III, any of which could materially harm our business, prospects, financial condition and operating results. We plan to grow our sales in Europe and Asia in 2013 and beyond. If there is a continued downturn in the European economy, our prospects of growth in Europe could be severely constrained which may harm our financial condition and operating results.

Our financial results may vary significantly from period-to-period due to the seasonality of our business, fluctuations in our operating costs and other factors.

Our operating results may vary significantly from period-to-period due to many factors, including seasonal factors that may have an effect on the demand for our electric vehicles. Demand for new cars in the automobile industry in general, typically decline over the winter season, while sales are generally higher during the spring and summer months. Sales of the Tesla Roadster have fluctuated on a seasonal basis with increased sales during the spring and summer months in our second and third fiscal quarters relative to our fourth and first fiscal quarters. We note that, in general, automotive sales tend to decline over the winter season and we anticipate that our sales of Model S, Model X and other models we introduce may have similar seasonality. However, our limited operating history makes it difficult for us to judge the exact nature or extent of the seasonality of our business. Also, any unusually severe weather conditions in some markets may impact demand for our vehicles. Our operating results could also suffer if we do not achieve revenue consistent with our expectations for this seasonal demand because many of our expenses are based on anticipated levels of annual revenue.

In addition, we expect our period-to-period operating results to vary based on our operating costs which we anticipate will increase significantly in future periods as we, among other things, design, develop and manufacture Model X and electric powertrain components, increase the production capacity at our manufacturing facilities to produce Model S and electric powertrain components, open new Tesla service centers with maintenance and repair capabilities, open new Supercharger locations, incur costs for warranty repairs or product recalls, if any, increase our sales and marketing activities, and increase our general and administrative functions to support our growing operations. As a result of these factors, we believe that quarter-to-quarter comparisons of our operating results, especially in the short-term, are not necessarily meaningful and that these comparisons cannot be relied upon as indicators of future performance. Moreover, our operating results may not meet expectations of equity research analysts or investors. If any of this occurs, the trading price of our common stock could fall substantially, either suddenly or over time.

If we are unable to establish and maintain confidence in our long-term business prospects among consumers, analysts and within our industry, then our financial condition, operating results, business prospects and stock price may suffer materially.

Our vehicles are highly technical products that require maintenance and support. If we were to cease or cut back operations, even years from now, buyers of our vehicles from years earlier might have much more difficulty in maintaining their vehicles and obtaining satisfactory support. As a result, consumers may be less likely to purchase our vehicles now if they are not convinced that our business will succeed or that our operations will continue for many years. Similarly, suppliers and other third parties will be less

[Table of Contents](#)

likely to invest time and resources in developing business relationships with us if they are not convinced that our business will succeed. If we are required to curtail our expansion plans in the future as we have done in the past, this may result in negative perceptions regarding our long-term business prospects and may lead to cancellations of Model S or Model X reservations.

Accordingly, in order to build and maintain our business, we must maintain confidence among customers, suppliers, analysts and other parties in our liquidity and long-term business prospects. In contrast to some more established automakers, we believe that, in our case, the task of maintaining such confidence may be particularly complicated by factors such as the following:

- our limited operating history;
- unfamiliarity with or uncertainty about Model S and Model X;
- uncertainty about the long-term marketplace acceptance of alternative fuel vehicles generally, or electric vehicles specifically;
- the perceived prospect that we will need ongoing infusions of external capital to fund our planned operations;
- the size of our expansion plans in comparison to our existing capital base and scope and history of operations; and
- the prospect or actual emergence of direct, sustained competitive pressure from more established automakers, which may be more likely if our initial efforts are perceived to be commercially successful.

Many of these factors are largely outside our control, and any negative perceptions about our long-term business prospects, even if exaggerated or unfounded, would likely harm our business and make it more difficult to raise additional funds when needed.

We may need or want to raise additional funds and these funds may not be available to us when we need them. If we cannot raise additional funds when we need or want them, our operations and prospects could be negatively affected.

The design, manufacture, sale and servicing of automobiles is a capital intensive business. We expect that our principal sources of liquidity will provide us adequate liquidity based on our current plans. However, until we are consistently generating positive free cash flows, if the costs for developing and manufacturing Model S variants or Model X exceed our expectations or if we incur any significant unplanned expenses or embark on or accelerate new significant strategic investments, we may need to raise additional funds through the issuance of equity, equity-related or debt securities or through obtaining credit from government or financial institutions. This capital will be necessary to fund our ongoing operations, continue research and development projects, including those for our planned Model X crossover, establish sales and service centers and to make the investments in tooling and manufacturing capital required to introduce Model X. We cannot be certain that additional funds will be available to us on favorable terms when required, or at all. If we cannot raise additional funds when we need them, our financial condition, results of operations, business and prospects could be materially adversely affected.

In addition, we have only recently begun to accept customer reservation payments on Model X, can provide no assurance that customers will be willing to make such payments and accordingly may be reliant on other sources to fund the development of this vehicle.

[Table of Contents](#)

We have very limited experience servicing our vehicles and we are using a different service model from the one typically used in the industry. If we are unable to address the service requirements of our existing and future customers our business will be materially and adversely affected.

If we are unable to successfully address the service requirements of our existing and future customers and meet customer expectations regarding service, our business and prospects will be materially and adversely affected. We have only produced and delivered a limited number of Roadsters and Model S vehicles. We have very limited experience servicing our vehicles, particularly our Model S vehicle. Servicing electric vehicles is different than servicing vehicles with internal combustion engines and requires specialized skills, including high voltage training and servicing techniques. If we are unable to satisfactorily service our customers and the various service related issues that they are facing and may face in the future, our ability to generate customer loyalty, grow our business and sell additional Model S vehicles could be impaired.

We service our performance electric vehicles through our company-owned Tesla service centers, certain of our stores, and through our mobile service technicians known as the Tesla Rangers. However, certain service centers have been open for short periods, and to date we have only limited experience servicing our performance vehicles at these locations. We will need to open new standalone service centers and hire and train significant numbers of new employees to staff these service centers and act as Tesla Rangers, in order to successfully maintain our fleet of delivered performance electric vehicles. We only implemented our Tesla Rangers program in October 2009 and have limited experience in deploying them to service our customers' vehicles. There can be no assurance that these service arrangements or our limited experience servicing our vehicles will adequately address the service requirements of our customers to their satisfaction, or that we will have sufficient resources to meet these service requirement in a timely manner as the volume of vehicles we are able to deliver annually increases.

We do not expect to be able to open Tesla service centers in all the geographic areas in which our existing and potential customers may reside. In order to address the service needs of customers that are not in geographical proximity to our service centers, we plan to either transport those vehicles to the nearest Tesla store or service center for servicing or deploy our mobile Tesla Rangers to service the vehicles at the customer's location. These special arrangements may be expensive and we may not be able to recoup the costs of providing these services to our customers. In addition, a number of potential customers may choose not to purchase our vehicles because of the lack of a more widespread service network. If we do not adequately address our customers' service needs, our brand and reputation will be adversely affected, which in turn, could have a material and adverse impact on our business, financial condition, operating results and prospects.

Traditional automobile manufacturers in the United States do not provide maintenance and repair services directly. Consumers must rather service their vehicles through franchised dealerships or through third party maintenance service providers. We do not have any such arrangements with third party service providers and it is unclear when or even whether such third party service providers will be able to acquire the expertise to service our vehicles. At this point, we anticipate that we will be providing substantially all of the service for our vehicles for the foreseeable future. As our vehicles are placed in more locations, we may encounter negative reactions from our consumers who are frustrated that they cannot use local service stations to the same extent as they have with their conventional automobiles and this frustration may result in negative publicity and reduced sales, thereby harming our business and prospects.

In addition, the motor vehicle industry laws in many states require that service facilities be available with respect to vehicles physically sold from locations in the state. Whether these laws would also require

[Table of Contents](#)

that service facilities be available with respect to vehicles sold over the internet to consumers in a state in which we have no physical presence is uncertain. While we believe our Tesla Ranger program and our practice of shipping customers' vehicles to our nearest Tesla store for service would satisfy regulators in these circumstances, without seeking formal regulatory guidance, there are no assurances that regulators will not attempt to require that we provide physical service facilities in their states. Further, certain state franchise laws which prohibit manufacturers from being licensed as a dealer or acting in the capacity of dealer also restrict manufacturers from providing vehicle service. If issues arise in connection with these laws, certain aspects of Tesla's service program would need to be restructured to comply with state law, which may harm our business.

We may not succeed in maintaining and strengthening the Tesla brand, which would materially and adversely affect customer acceptance of our vehicles and components and our business, revenues and prospects.

Our business and prospects are heavily dependent on our ability to develop, maintain and strengthen the Tesla brand. Any failure to develop, maintain and strengthen our brand may materially and adversely affect our ability to sell the Model S, Model X, Gen III and other future planned electric vehicles, and sell our electric powertrain components. If we do not continue to establish, maintain and strengthen our brand, we may lose the opportunity to build a critical mass of customers. Promoting and positioning our brand will likely depend significantly on our ability to provide high quality electric cars and maintenance and repair services, and we have very limited experience in these areas. Any problems associated with the Toyota RAV4 EV which uses a Tesla powertrain, potential future Daimler vehicles that use Tesla powertrains or the Model X may hurt the Tesla brand.

In addition, we expect that our ability to develop, maintain and strengthen the Tesla brand will also depend heavily on the success of our marketing efforts. To date, we have limited experience with marketing activities as we have relied primarily on the internet, word of mouth and attendance at industry trade shows to promote our brand. To further promote our brand, we may be required to change our marketing practices, which could result in substantially increased advertising expenses, including the need to use traditional media such as television, radio and print. The automobile industry is intensely competitive, and we may not be successful in building, maintaining and strengthening our brand. Many of our current and potential competitors, particularly automobile manufacturers headquartered in Detroit, Japan and the European Union, have greater name recognition, broader customer relationships and substantially greater marketing resources than we do. If we do not develop and maintain a strong brand, our business, prospects, financial condition and operating results will be materially and adversely impacted.

If our vehicle owners customize our vehicles or change the charging infrastructure with aftermarket products, the vehicle may not operate properly, which could harm our business.

Automobile enthusiasts may seek to "hack" our vehicles to modify its performance which could compromise vehicle safety systems. Also, we are aware of customers who have customized their vehicles with after-market parts that may compromise driver safety. For example, some customers have installed seats that elevate the driver such that airbag and other safety systems could be compromised. Other customers have changed wheels and tires, while others have installed large speaker systems that may impact the electrical systems of the vehicle. We have not tested, nor do we endorse, such changes or products. In addition, customer use of improper external cabling or unsafe charging outlets can expose our customers to injury from high voltage electricity. Such unauthorized modifications could reduce the safety of our vehicles and any injuries resulting from such modifications could result in adverse publicity which would negatively affect our brand and harm our business, prospects, financial condition and operating results.

Regulators could review our practice of taking reservation and deposit payments and, if the practice is deemed to violate applicable law, we could be required to pay penalties, refund the payments stop accepting additional payments, and restructure certain aspects of our sales program.

For customers interested in placing an order for Model S or making a reservation for Model X, we require an initial fully refundable customer deposit. We generally use these funds for working capital and other general corporate purposes. California laws, and potentially the laws of other states, restrict the ability of licensed auto dealers to advertise or take deposits for vehicles before the vehicles are available to the dealer from the manufacturer. In November 2007, we became aware that the New Motor Vehicle Board of the California Department of Transportation has considered whether our reservation policies and advertising comply with the California Vehicle Code. To date, we have not received any communications on this topic from the New Motor Vehicle Board or the Department of Motor Vehicles (DMV), which has the power to enforce these laws. There can be no assurance that the DMV will not take the position that our vehicle reservation or advertising practices violate the law. In addition, California is currently the only jurisdiction in which we have licenses to both manufacture and sell our vehicles so any limitation imposed on our operations in California may be particularly damaging to our business. The DMV also has the power to suspend licenses to manufacture and sell vehicles in California, following a hearing on the merits, which it has typically exercised in cases of significant or repeat violations and/or a refusal to comply with DMV directions.

Certain states may have specific laws which apply to reservation payments accepted by dealers, or manufacturers selling directly to consumers, or both. For example, the state of Washington requires that reservation payments or other payments received from residents in the state of Washington must be placed in a segregated account until delivery of the vehicle, which account must be unencumbered by any liens from creditors of the dealer and may not be used by the dealer. Consequently, we established a segregated account for customer deposits in the state of Washington in January 2010. There can be no assurance that other state or foreign jurisdictions will not require similar segregation of reservation payments received from customers. Our inability to access these funds for working capital purposes could harm our liquidity. Furthermore, while we have performed an analysis of the principal laws in the European Union relating to our distribution model and believe we comply with such laws, we have not performed a complete analysis in all foreign jurisdictions in which we may sell vehicles. Accordingly, there may be laws in jurisdictions we have not yet entered or laws we are unaware of in jurisdictions we have entered that may restrict our vehicle reservation practices or other business practices. Reductions in our cash as a result of redemptions or an inability to take reservation payments could make it necessary to raise additional funds and also make it more difficult for us to obtain additional financing. The prospect of reductions in cash, even if unrealized, may also make it more difficult to obtain financing.

Our plan to expand our network of Tesla stores and service centers will require significant cash investments and management resources and may not meet our expectations with respect to additional sales of our electric vehicles. In addition, we may not be able to open stores or service centers in certain states.

Our plan to expand our network of Tesla stores and service centers will require significant cash investments and management resources and may not meet our expectations with respect to additional sales of our electric vehicles. This planned global expansion of Tesla stores and service centers may not have the desired effect of increasing sales and expanding our brand presence to the degree we are anticipating. Furthermore there can be no assurances that we will be able to construct additional storefronts and locations on the budget or timeline we have established. We will also need to ensure we are in compliance with any regulatory requirements applicable to the sale and service of our vehicles in those jurisdictions, which could take considerable time and expense. If we experience any delays in expanding our network of Tesla stores and service centers, this could lead to a decrease in sales of our

[Table of Contents](#)

vehicles and could negatively impact our business, prospects, financial condition and operating results. We have opened Tesla stores and service centers in major metropolitan areas throughout North America, Europe and Asia. We plan to open additional stores and service centers, in particular with a goal of establishing approximately 50 stores globally within the next several years in connection with the Model S rollout. However, we may not be able to expand our network at such rate and our planned expansion of our network of Tesla stores and service centers will require significant cash investment and management resources, as well as efficiency in the execution of establishing these locations and in hiring and training the necessary employees to effectively sell and service our vehicles.

Furthermore, certain states and foreign jurisdictions may have permit requirements, franchise dealer laws or similar laws or regulations that may preclude or restrict our ability to open stores or sell vehicles out of such states and jurisdictions. Any such prohibition or restriction may lead to decreased sales in such jurisdictions, which could harm our business, prospects and operating results. See Risk Factor “*We may face regulatory limitations on our ability to sell vehicles directly or over the internet which could materially and adversely affect our ability to sell our electric vehicles.*”

We face risks associated with our international operations, including unfavorable regulatory, political, tax and labor conditions, which could harm our business.

We face risks associated with our international operations, including possible unfavorable regulatory, political, tax and labor conditions, which could harm our business. We currently have international operations and subsidiaries in various countries and jurisdictions that are subject to the legal, political, regulatory and social requirements and economic conditions in these jurisdictions. Additionally, as part of our growth strategy, we intend to expand our sales, maintenance and repair services internationally. However, we have limited experience to date selling and servicing our vehicles internationally and such expansion would require us to make significant expenditures, including the hiring of local employees and establishing facilities, in advance of generating any revenue. We are subject to a number of risks associated with international business activities that may increase our costs, impact our ability to sell our electric vehicles and require significant management attention. These risks include:

- conforming our vehicles to various international regulatory and safety requirements where our vehicles are sold, or homologation;
- difficulty in staffing and managing foreign operations;
- difficulties attracting customers in new jurisdictions;
- foreign government taxes, regulations and permit requirements, including foreign taxes that we may not be able to offset against taxes imposed upon us in the United States, and foreign tax and other laws limiting our ability to repatriate funds to the United States;
- fluctuations in foreign currency exchange rates and interest rates, including risks related to any interest rate swap or other hedging activities we undertake;
- our ability to enforce our contractual and intellectual property rights, especially in those foreign countries that do not respect and protect intellectual property rights to the same extent as do the United States, Japan and European countries, which increases the risk of unauthorized, and uncompensated, use of our technology;
- United States and foreign government trade restrictions, tariffs and price or exchange controls;
- foreign labor laws, regulations and restrictions;

[Table of Contents](#)

- preferences of foreign nations for domestically produced vehicles;
- changes in diplomatic and trade relationships;
- political instability, natural disasters, war or events of terrorism; and
- the strength of international economies.

If we fail to successfully address these risks, our business, prospects, operating results and financial condition could be materially harmed.

Foreign currency movements relative to the U.S. dollar could harm our financial results.

Our revenues and costs denominated in foreign currencies are not completely matched. For example, a portion of our costs and expenses for the three months ended June 30, 2013 was denominated in foreign currencies, including the Japanese yen, the euro and the British pound. Conversely for this period until such time as we begin shipping significant quantities of Model S vehicles to Europe and Asia, we expect that a significant majority of our revenue will be denominated in U.S. dollars. Accordingly, if the value of the U.S. dollar depreciates significantly against these currencies, especially against the Japanese yen, our costs as measured in U.S. dollars as a percent of our revenues will correspondingly increase and our margins will suffer. As a result, our operating results could be adversely affected. As we begin selling Model S overseas in 2013, as well as delivering powertrain units to Daimler, we may have greater revenues than costs denominated in other currencies, in which case a strengthening of the dollar would tend to reduce our revenues as measured in U.S. dollars.

If we fail to manage future growth effectively as we rapidly grow our company, we may not be able to produce, market, sell and service our vehicles successfully.

Any failure to manage our growth effectively could materially and adversely affect our business, prospects, operating results and financial condition. We continue to expand our operations significantly, and additional significant expansion will be required, especially in connection with the expansion of our network of Tesla stores, service centers across the United States as well as in Europe and Asia. Our future operating results depend to a large extent on our ability to manage this expansion and growth successfully. Risks that we face in undertaking this expansion include:

- finding and training new personnel;
- forecasting production and revenue;
- controlling expenses and investments in anticipation of expanded operations;
- establishing or expanding design, manufacturing, sales and service facilities;
- implementing and enhancing manufacturing and administrative infrastructure, systems and processes;
- addressing new markets; and
- expanding international operations.

[Table of Contents](#)

We intend to continue to hire a significant number of additional personnel, including manufacturing personnel, design personnel, engineers and service technicians for our performance electric vehicles. Because our high-performance vehicles are based on a different technology platform than traditional internal combustion engines, individuals with sufficient training in performance electric vehicles may not be available to hire, and we will need to expend significant time and expense training the employees we do hire. Competition for individuals with experience designing, manufacturing and servicing electric vehicles is intense, and we may not be able to attract, assimilate, train or retain additional highly qualified personnel in the future. The failure to attract, integrate, train, motivate and retain these additional employees could seriously harm our business and prospects.

Developments in alternative technologies or improvements in the internal combustion engine may materially adversely affect the demand for our electric vehicles.

Significant developments in alternative technologies, such as advanced diesel, ethanol, fuel cells or compressed natural gas, or improvements in the fuel economy of the internal combustion engine, may materially and adversely affect our business and prospects in ways we do not currently anticipate. Any failure by us to develop new or enhanced technologies or processes, or to react to changes in existing technologies, could materially delay our development and introduction of new and enhanced electric vehicles, which could result in the loss of competitiveness of our vehicles, decreased revenue and a loss of market share to competitors.

The unavailability, reduction or elimination of government and economic incentives could have a material adverse effect on our business, financial condition, operating results and prospects.

Any reduction, elimination or discriminatory application of government subsidies and economic incentives because of policy changes, the reduced need for such subsidies and incentives due to the customer base of our electric vehicles, fiscal tightening or other reasons may result in the diminished competitiveness of the alternative fuel vehicle industry generally or our electric vehicles in particular. This could materially and adversely affect the growth of the alternative fuel automobile markets and our business, prospects, financial condition and operating results.

Our growth depends in part on the availability and amounts of government subsidies and economic incentives for alternative fuel vehicles generally and performance electric vehicles specifically. For example, we currently benefit from exemptions from California state sales and use taxes for purchases of up to \$612 million of manufacturing equipment from our arrangements with the California Alternative Energy and Advanced Transportation Financing Authority. To the extent all of this equipment is purchased and would otherwise be subject to California state sales and use tax, we believe this incentive would result in tax savings by us through January 2015. This exemption is only available for equipment that would otherwise be subject to California sales and use taxes and that would be used only for specified purposes. If we fail to meet these conditions, we would be unable to take full advantage of this tax incentive and our financial position could be harmed.

In addition, certain regulations and laws that encourage sales of electric cars through tax credits or other subsidies could be reduced, eliminated or applied in a way that creates an adverse effect against our vehicles, either currently or at any time in the future. For example, while the federal and state governments have from time to time enacted tax credits and other incentives for the purchase of alternative fuel cars, funding for these programs is limited and there is no guarantee that our vehicles will be eligible for tax credits or other incentives provided to alternative fuel vehicles in the future. This would put our vehicles at a competitive disadvantage. As an example at the state level, California renewed the Clean Vehicle Rebate Program for 2012 a rebate program for the purchase of qualified alternative technology vehicles. California recently reduced the rebate amount from \$5,000 per vehicle to \$2,500 per vehicle due to fewer funds available and increased demand, and such funds may run out or be limited in

[Table of Contents](#)

ways that would be adverse to purchasers of our vehicles. Subsequent purchasers could face a delay in receiving rebates since they would have to wait until the next fiscal year's funding became available or be unable to obtain a rebate at all. Moreover, as more and more eligible EVs are produced, California now faces a risk that the program will run out of funds prior to the end of the fiscal year. While California is looking at additional sources of funding for this program, other options under consideration are removing eligibility for vehicles based on MSRP or customer income levels. If enacted, these measures would almost certainly impact us in an adverse manner by making either our vehicles or customers ineligible for rebates. As an additional example, there is considerable discussion at the federal level over tax reform. Discussions have included reducing or even eliminating the current \$7,500 tax credit available to purchasers of qualified alternative fuel vehicles, including Model S. Also, government disincentives have been enacted in Europe for gas-powered vehicles, which discourage the use of such vehicles in Europe. In the event that such disincentives are reduced or eliminated, sales of electric vehicles, including our and Model S, could be adversely affected.

Our relationship with Daimler is subject to various risks which could adversely affect our business and future prospects.

Our relationship with Daimler poses various risks to us including:

- potential loss of access to parts that Daimler is providing for Model S;
- potential loss of business and adverse publicity to our brand image if there are defects or other problems discovered with our electric powertrain components that Daimler has incorporated into their vehicles; and
- potential inability to successfully negotiate an agreement to supply Daimler with production parts for the Mercedes-Benz B-Class EV.

The occurrence of any of the foregoing could adversely affect our business, prospects, financial condition and operating results.

The operation of our vehicles is different from internal combustion engine vehicles and our customers may experience difficulty operating them properly, including difficulty transitioning between different methods of braking.

We have designed our vehicles to minimize inconvenience and inadvertent driver damage to the powertrain. In certain instances, these protections may cause the vehicle to behave in ways that are unfamiliar to drivers of internal combustion vehicles. For example, we employ regenerative braking to recharge the battery pack in most modes of vehicle operation. Our customers may become accustomed to using this regenerative braking instead of the wheel brakes to slow the vehicle. However, when the vehicle is at maximum charge, the regenerative braking is not needed and is not employed. Accordingly, our customers may have difficulty shifting between different methods of braking. In addition, we use safety mechanisms to limit motor torque when the powertrain system reaches elevated temperatures. In such instances, the vehicle's acceleration and speed will decrease. Finally, if the driver permits the battery pack to substantially deplete its charge, the vehicle will progressively limit motor torque and speed to preserve the charge that remains. The vehicle will lose speed and ultimately coast to a stop. Despite several warnings about an imminent loss of charge, the ultimate loss of speed may be unexpected. There can be no assurance that our customers will operate the vehicles properly, especially in these situations. Any accidents resulting from such failure to operate our vehicles properly could harm our brand and reputation, result in adverse publicity and product liability claims, and have a material adverse effect on our business, prospects, financial condition and operating results. In addition, if consumers dislike these features, they may choose not to buy additional cars from us which could also harm our business and prospects.

[Table of Contents](#)

If we are unable to keep up with advances in electric vehicle technology, we may suffer a decline in our competitive position.

We may be unable to keep up with changes in electric vehicle technology and, as a result, may suffer a decline in our competitive position. Any failure to keep up with advances in electric vehicle technology would result in a decline in our competitive position which would materially and adversely affect our business, prospects, operating results and financial condition. Our research and development efforts may not be sufficient to adapt to changes in electric vehicle technology. As technologies change, we plan to upgrade or adapt our vehicles and introduce new models in order to continue to provide vehicles with the latest technology, in particular battery cell technology. However, our vehicles may not compete effectively with alternative vehicles if we are not able to source and integrate the latest technology into our vehicles. For example, we do not manufacture battery cells, which makes us dependent upon other suppliers of battery cell technology for our battery packs.

If we are unable to attract and/or retain key employees and hire qualified management, technical, vehicle engineering and manufacturing personnel, our ability to compete could be harmed and our stock price may decline.

The loss of the services of any of our key employees could disrupt our operations, delay the development and introduction of our vehicles and services, and negatively impact our business, prospects and operating results as well as cause our stock price to decline. In particular, we are highly dependent on the services of Elon Musk, our Chief Executive Officer, Product Architect and Chairman of our Board of Directors, and JB Straubel, our Chief Technical Officer. None of our key employees is bound by an employment agreement for any specific term. There can be no assurance that we will be able to successfully attract and retain senior leadership necessary to grow our business. Our future success depends upon our ability to attract and retain our executive officers and other key technology, sales, marketing, engineering, manufacturing and support personnel and any failure to do so could adversely impact our business, prospects, financial condition and operating results. We have in the past and may in the future experience difficulty in retaining members of our senior management teams as well as technical, vehicle engineering and manufacturing personnel due to various factors, such as a very competitive labor market for talented individuals with automotive experience. In addition, we do not have “key person” life insurance policies covering any of our officers or other key employees.

Currently in Northern California, there is increasing competition for talented individuals with the specialized knowledge of electric vehicles, software engineers, manufacturing engineers and other skilled employees and this competition affects both our ability to retain key employees and hire new ones. Our continued success depends upon our continued ability to hire and retain employees. Additionally, we compete with many mature and prosperous companies in Northern California that have far greater financial resources than we do and thus can offer current or prospective employees more lucrative incentive packages than we can. Any difficulties in retaining current employees or recruiting new ones would have an adverse effect on our performance.

We are highly dependent on the services of Elon Musk, our Chief Executive Officer.

We are highly dependent on the services of Elon Musk, our Chief Executive Officer, Product Architect, Chairman of our Board of Directors and largest stockholder. Although Mr. Musk spends significant time with Tesla and is highly active in our management, he does not devote his full time and attention to Tesla. Mr. Musk also currently serves as Chief Executive Officer and Chief Technical Officer of Space Exploration Technologies, a developer and manufacturer of space launch vehicles, and Chairman of SolarCity, a solar equipment installation company.

We are subject to various environmental and safety laws and regulations that could impose substantial costs upon us and negatively impact our ability to operate our manufacturing facilities.

As an automobile manufacturer, we and our operations, both in the United States and abroad, are subject to national, state, provincial and/or local environmental, health and safety laws and regulations, including laws relating to the use, handling, storage, disposal and human exposure to hazardous materials. Environmental and health and safety laws and regulations can be complex, and we expect that our business and operations will be affected by future amendments to such laws or other new environmental and health and safety laws which may require us to change our operations, potentially resulting in a material adverse effect on our business. These laws can give rise to liability for administrative oversight costs, cleanup costs, property damage, bodily injury and fines and penalties. Capital and operating expenses needed to comply with environmental, health and safety laws and regulations can be significant, and violations may result in substantial fines and penalties, third party damages, suspension of production or a cessation of our operations.

Contamination at properties formerly owned or operated by us, as well as at properties we will own and operate, and properties to which hazardous substances were sent by us, may result in liability for us under environmental laws and regulations, including, but not limited to the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), which can impose liability for the full amount of remediation-related costs without regard to fault, for the investigation and cleanup of contaminated soil and ground water, for building contamination and impacts to human health and for damages to natural resources. The costs of complying with environmental laws and regulations and any claims concerning noncompliance, or liability with respect to contamination in the future, could have a material adverse effect on our financial condition or operating results. We may face unexpected delays in obtaining the necessary permits and approvals required by environmental laws in connection with our manufacturing facilities that could require significant time and financial resources and negatively impact our ability to operate these facilities, which would adversely impact our business prospects and operating results.

New United Motor Manufacturing, Inc. (NUMMI) has previously identified environmental conditions at the Tesla Factory which affect soil and groundwater, and has undertaken efforts to address these conditions. Although we have been advised by NUMMI that it has documented and managed the environmental issues at the Fremont site, we cannot currently determine with certainty the total potential costs to remediate pre-existing contamination, and we may be exposed to material liability as a result of the existence of any environmental contamination at the Fremont site.

As the owner of the Fremont site, we may be responsible under federal and state laws and regulations for the entire investigation and remediation of any environmental contamination at the Fremont site, whether it occurred before or after the date we purchase the property. We have reached an agreement with NUMMI under which, over a ten year period, we will pay the first \$15.0 million of any costs of any governmentally-required remediation activities for contamination that existed prior to the closing of the purchase for any known or unknown environmental conditions (Remediation Activities), and NUMMI has agreed to pay the next \$15.0 million for such Remediation Activities. Our agreement provides, in part, that NUMMI will pay up to the first \$15.0 million on our behalf if such expenses are incurred in the first four years of our agreement, subject to our reimbursement of such costs on the fourth anniversary date of the closing.

On the ten-year anniversary of the closing or whenever \$30.0 million has been spent on the Remediation Activities, whichever comes first, NUMMI's liability to us with respect to Remediation

[Table of Contents](#)

Activities ceases, and we are responsible for any and all environmental conditions at the Fremont site. At that point in time, we have agreed to indemnify, defend, and hold harmless NUMMI from all liability, including attorney fees, or any costs or penalties it may incur arising out of or in connection with any claim relating to environmental conditions and we have released NUMMI for any known or unknown claims except for NUMMI's obligations for representations and warranties under the agreement. As of June 30, 2013, we have accrued \$5.3 million related to these environmental liabilities.

There are no assurances that NUMMI will perform its obligations under our agreement and NUMMI's failure to perform would require us to undertake these obligations at a potentially significant cost and risk to our ability to increase the production capacity of, and operate, our Tesla Factory. Any Remediation Activities or other environmental conditions at the Fremont site could harm our operations and the future use and value of the Fremont site and could delay our production plans for Model S.

Our business may be adversely affected by union activities.

Although none of our employees are currently represented by a labor union, it is common throughout the automobile industry generally for many employees at automobile companies to belong to a union, which can result in higher employee costs and increased risk of work stoppages. Our employees may join or seek recognition to form a labor union, or we may be required to become a union signatory. Additionally, disgruntled ex-employees may actively encourage unionization of Tesla employees. Our automobile production facility in Fremont, California was purchased from NUMMI. Prior employees of NUMMI were union members and our future work force at this facility may be inclined to vote in favor of forming a labor union. We are also directly or indirectly dependent upon companies with unionized work forces, such as parts suppliers and trucking and freight companies, and work stoppages or strikes organized by such unions could have a material adverse impact on our business, financial condition or operating results. If a work stoppage occurs, it could delay the manufacture and sale of our performance electric vehicles and have a material adverse effect on our business, prospects, operating results or financial condition. The mere fact that our labor force could be unionized may harm our reputation in the eyes of some investors and thereby negatively affect our stock price. Additionally, the unionization of our labor force could increase our employee costs and decrease our profitability, both of which could adversely affect our business, prospects, financial condition and results of operations.

We are subject to substantial regulation, which is evolving, and unfavorable changes or failure by us to comply with these regulations could substantially harm our business and operating results.

Our performance electric vehicles, the sale of motor vehicles in general and the electronic components used in our vehicles are subject to substantial regulation under international, federal, state, and local laws. We have incurred, and expect to incur in the future, significant costs in complying with these regulations.

Regulations related to the electric vehicle industry and alternative energy are currently evolving and we face risks associated with changes to these regulations, such as in the United States,:

- the imposition of a carbon tax or the introduction of a cap-and-trade system on electric utilities could increase the cost of electricity;
- increasingly stringent Clean Air Act emission regulations affecting power plants used to generate electricity could increase the cost of electricity;
- changes to the regulations governing the assembly and transportation of lithium-ion battery packs, such as the UN Recommendations of the Safe Transport of Dangerous Goods Model Regulations or regulations adopted by the U.S. Pipeline and Hazardous Materials Safety Administration (PHMSA) could increase the cost of lithium-ion battery packs or restrict their transport;

[Table of Contents](#)

- the amendment or rescission of the federal law and regulations mandating increased fuel economy in the United States, referred to as the Corporate Average Fuel Economy (CAFE) standards could reduce new business opportunities for our powertrain sales and development activities;
- the amendment or rescission of federal greenhouse gas tailpipe emission regulations administered by EPA under the authority of the Clean Air Act could reduce new business opportunities for our powertrain sales and development activities;
- the amendment or rescission of California's zero emission vehicle regulations administered by the California Air Resources Board under the California Health & Safety Code could reduce new business opportunities for our powertrain sales and development activities, as well as our ability to monetize ZEV credits not only in California, but also in the eleven additional states that have adopted the California program;
- increased sensitivity by regulators to the needs of established automobile manufacturers with large employment bases, high fixed costs and business models based on the internal combustion engine could lead them to pass regulations that could reduce the compliance costs of such established manufacturers or mitigate the effects of government efforts to promote alternative fuel vehicles; and
- changes to regulations governing the export of our products could increase our costs incurred to deliver products outside the United States or force us to charge a higher price for our vehicles in such jurisdictions.

In addition, as the automotive industry moves towards greater use of electronics for vehicle systems, NHTSA and other regulatory bodies may in the future increase regulation for these electronic systems as concerns about distracted driving increase. Such concerns could affect electronic systems in Model S, including those used with the 17 inch display screen in Model S which could reduce the appeal of Model S or require adjustments to the display screen's functionality.

As we begin to deliver vehicles in Europe and Asia, we are also becoming subject to additional laws and regulations applicable to the import, sale and service of automobiles in those regions, with which we have little or no experience complying.

To the extent the laws change, some or all of our vehicles may not comply with applicable international, federal, state or local laws, which would have an adverse effect on our business. Compliance with changing regulations could be burdensome, time consuming, and expensive. To the extent compliance with new regulations is cost prohibitive, our business, prospects, financial condition and operating results will be adversely affected.

We retain certain personal information about our customers and may be subject to various privacy and consumer protection laws.

We use our vehicles' electronic systems to log information about each vehicle's condition, performance and use in order to aid us in providing customer service, including vehicle diagnostics, repair and maintenance, as well as to help us collect data regarding our customers' charge time, battery usage, mileage and efficiency habits and to improve our vehicles. We also collect information about our customers through our website, at our stores and facilities, and via telephone. Our customers may object to the processing of this data, which may negatively impact our ability to provide effective customer service and develop new vehicles and products. Collection and use of our customers' personal information in conducting our business may be subject to federal and/or state laws and regulations in the United States and foreign jurisdictions, and such laws and regulations may restrict our processing of such

[Table of Contents](#)

personal information and hinder our ability to acquire new customers or market to existing customers. We may incur significant expenses to comply with privacy, consumer protection and security standards and protocols imposed by law, regulation, industry standards or contractual obligations. Although we take steps to protect the security of our customers' personal information, we may be required to expend significant resources to comply with data breach requirements if third parties improperly obtain and use the personal information of our customers or we otherwise experience a data loss with respect to customers' personal information. A major breach of our network security and systems could have serious negative consequences for our businesses and future prospects, including possible fines, penalties and damages, reduced customer demand for our vehicles, and harm to our reputation and brand.

We may become subject to product liability claims, which could harm our financial condition and liquidity if we are not able to successfully defend or insure against such claims.

We may become subject to product liability claims, which could harm our business, prospects, operating results and financial condition. The automobile industry experiences significant product liability claims and we face inherent risk of exposure to claims in the event our vehicles do not perform as expected or malfunction resulting in personal injury or death. Our risks in this area are particularly pronounced given the limited number of vehicles delivered to date and limited field experience of those vehicles, including Model S. A successful product liability claim against us could require us to pay a substantial monetary award. Moreover, a product liability claim could generate substantial negative publicity about our vehicles and business and inhibit or prevent commercialization of other future vehicle candidates which would have material adverse effect on our brand, business, prospects and operating results. We self insure against the risk of product liability claims. Any lawsuit seeking significant monetary damages may have a material adverse effect on our reputation, business and financial condition. We may not be able to secure additional product liability insurance coverage on commercially acceptable terms or at reasonable costs when needed, particularly if we do face liability for our products and are forced to make a claim under our policy.

We may be compelled to undertake product recalls, which could adversely affect our brand image and financial performance.

Any product recall in the future may result in adverse publicity, damage our brand and adversely affect our business, prospects, operating results and financial condition. We previously experienced product recalls in May 2009, October 2010 and June 2013, none of which were related to our electric powertrain. In April 2009, we determined that a condition caused by insufficient torquing of the rear inner hub flange bolt existed in some of our Tesla Roadsters, as a result of a missed process during the manufacture of the Tesla Roadster glider. In October 2010, we initiated a product recall after the 12 volt, low voltage auxiliary cable in a single vehicle chafed against the edge of a carbon fiber panel in the vehicle causing a short, smoke and possible fire behind the right front headlamp of the vehicle. In June 2013, we initiated a recall of slightly more than one thousand Model S vehicles to inspect and repair rear seat strikers that may have been compromised during the assembly process. Rear seat strikers are used to retain the rear seat backs in an upright position. Failure of this component may have resulted in collapse of the rear seat back during a crash. In the future, we may at various times, voluntarily or involuntarily, initiate a recall if any of our vehicles, including Model S, or electric powertrain components prove to be defective or noncompliant with applicable federal motor vehicle safety standards. Such recalls, voluntary or involuntary, involve significant expense and diversion of management attention and other resources, which could adversely affect our brand image in our target markets and could adversely affect our business, prospects, financial condition and results of operations.

Our current and future warranty reserves may be insufficient to cover future warranty claims which could adversely affect our financial performance.

[Table of Contents](#)

If our warranty reserves are inadequate to cover future warranty claims on our vehicles, our business, prospects, financial condition and operating results could be materially and adversely affected. We provide a three year or 36,000 mile New Vehicle Limited Warranty with every Tesla Roadster, which we extended to four years or 50,000 miles for the purchasers of our 2008 Tesla Roadster. In addition, customers have the opportunity to purchase Extended Service plans for the period after the end of the New Vehicle Limited Warranty for the Tesla Roadster to cover additional services for up to an additional three years or 36,000 miles, provided they are purchased within a specified period of time. Subject to separate limited warranties for the supplemental restraint system and battery, we provide a four year or 50,000 mile New Vehicle Limited Warranty for the purchasers of Model S. The New Vehicle Limited Warranty for Model S covers the battery for a period of eight years or 125,000 miles or unlimited miles, depending on the size of the vehicle's battery, although the battery's charging capacity is not covered under the New Vehicle Limited Warranty or any Extended Service plan. In addition, customers have the opportunity to purchase an Extended Service plan for the period after the end of the New Vehicle Limited Warranty for Model S to cover additional services for an additional four years or 50,000 miles, provided it is purchased within a specified period of time. The New Vehicle Limited Warranty and Extended Service plans for each of the Tesla Roadster and Model S are subject to certain limitations, exclusions or separate warranties, including certain wear items, such as tires, brake pads, paint and general appearance, and battery performance, and is intended to cover parts and labor to repair defects in material or workmanship in the vehicle including the body, chassis, suspension, interior, electronic systems, powertrain and brake system. We have previously provided our Tesla Roadster customers with a battery replacement option to replace the battery in their vehicles at any time after the expiration of the New Vehicle Limited Warranty but before the tenth anniversary of the purchase date of their vehicles.

We record and adjust warranty reserves based on changes in estimated costs and actual warranty costs. For new vehicles in particular, we record warranty reserves based on management's best estimate of projected warranty experience until adequate historical data is accumulated over a period of time, generally a few quarters. As we have limited operating experience with Model S, and therefore little experience with warranty claims for this vehicle, reserves that we recorded for Model S may be insufficient to cover all future warranty claims. Additionally, in April 2013, as part of our ongoing efforts to improve the customer ownership experience, we made the Model S battery warranty a "no fault" warranty and also eliminated the annual service requirement that was needed to keep the New Vehicle Limited Warranty in effect. Should this change in warranty coverage lead to an increase in warranty claims, we may need to record additional warranty reserves which would negatively affect our profitability.

Since we began initiating sales of our vehicles, we have continued to refine our warranty reserves based on our actual warranty claim experience and we may be required to undertake further such changes in the future. As of June 30, 2013, we had warranty reserves of \$36.9 million, and such reserve amount will increase in the future as Model S is sold. We could in the future become subject to a significant and unexpected warranty expense. There can be no assurances that our currently existing or future warranty reserves will be sufficient to cover all claims due to potential higher average warranty expenses over the product life cycle or that our limited experience with warranty claims will adequately address the needs of our customers to their satisfaction.

The range and power of our electric vehicles on a single charge declines over time which may negatively influence potential customers' decisions whether to purchase our vehicles.

The range and power of our electric vehicles on a single charge declines principally as a function of usage, time and charging patterns as well as other factors. How a customer uses their Tesla vehicle, the frequency of recharging the battery pack at a low state of charge and the means of charging can result in additional deterioration of the battery pack's ability to hold a charge over the long term. For example, we currently expect that our battery pack for the Tesla Roadster will retain approximately 60-65% of its

[Table of Contents](#)

ability to hold its initial charge after approximately 100,000 miles or seven years, which will result in a decrease to the vehicle's initial range and power. Deterioration of the Model S battery pack is expected to be less than the Roadster; however, such battery pack deterioration and the related decrease in range and power may negatively influence potential customer decisions whether to purchase our vehicles, which may harm our ability to market and sell our vehicles.

We may need to defend ourselves against patent or trademark infringement claims, which may be time-consuming and would cause us to incur substantial costs.

Companies, organizations or individuals, including our competitors, may hold or obtain patents, trademarks or other proprietary rights that would prevent, limit or interfere with our ability to make, use, develop or sell our vehicles or components, which could make it more difficult for us to operate our business. From time to time, we may receive inquiries from holders of patents or trademarks inquiring whether we infringe their proprietary rights. Companies holding patents or other intellectual property rights may bring suits alleging infringement of such rights or otherwise asserting their rights and seeking licenses. In addition, if we are determined to have infringed upon a third party's intellectual property rights, we may be required to do one or more of the following:

- cease selling, incorporating or using vehicles that incorporate the challenged intellectual property;
- pay substantial damages;
- obtain a license from the holder of the infringed intellectual property right, which license may not be available on reasonable terms or at all; or
- redesign our vehicles.

In the event of a successful claim of infringement against us and our failure or inability to obtain a license to the infringed technology, our business, prospects, operating results and financial condition could be materially adversely affected. In addition, any litigation or claims, whether or not valid, could result in substantial costs and diversion of resources and management attention.

We may also face claims that our use technology licensed from or otherwise supplied by a third party infringes the rights of others. In that case, we may seek indemnification from our licensors/suppliers under our contracts with them. However, our rights to indemnification may be unavailable or insufficient to cover our costs and losses, depending on our use of the technology, whether we choose to retain control over conduct of the litigation, and other factors.

Our business will be adversely affected if we are unable to protect our intellectual property rights from unauthorized use or infringement by third parties.

Any failure to protect our proprietary rights adequately could result in our competitors offering similar products, potentially resulting in the loss of some of our competitive advantage and a decrease in our revenue which would adversely affect our business, prospects, financial condition and operating results. Our success depends, at least in part, on our ability to protect our core technology and intellectual property. To accomplish this, we rely on a combination of patents, patent applications, trade secrets, including know-how, employee and third party nondisclosure agreements, copyright protection, trademarks, intellectual property licenses and other contractual rights to establish and protect our proprietary rights in our technology. We have also received from third parties patent licenses related to manufacturing our vehicles.

[Table of Contents](#)

The protection provided by the patent laws is and will be important to our future opportunities. However, such patents and agreements and various other measures we take to protect our intellectual property from use by others may not be effective for various reasons, including the following:

- our pending patent applications may not result in the issuance of patents;
- our patents, if issued, may not be broad enough to protect our proprietary rights;
- the patents we have been granted may be challenged, invalidated or circumvented because of the pre-existence of similar patented or unpatented technology or for other reasons;
- the costs associated with enforcing patents, confidentiality and invention agreements or other intellectual property rights may make aggressive enforcement impracticable;
- current and future competitors may independently develop similar technology, duplicate our vehicles or design new vehicles in a way that circumvents our patents; and
- our in-licensed patents may be invalidated or the holders of these patents may seek to breach our license arrangements.

Existing trademark and trade secret laws and confidentiality agreements afford only limited protection. In addition, the laws of some foreign countries do not protect our proprietary rights to the same extent as do the laws of the United States, and policing the unauthorized use of our intellectual property is difficult. Unauthorized use or infringement of our trademarks in countries which have a “first-to-file” system could affect our ability to successfully grow our business internationally.

Our patent applications may not result in issued patents, which may have a material adverse effect on our ability to prevent others from commercially exploiting products similar to ours.

We cannot be certain that we are the first creator of inventions covered by pending patent applications or the first to file patent applications on these inventions, nor can we be certain that our pending patent applications will result in issued patents or that any of our issued patents will afford protection against a competitor. In addition, patent applications filed in foreign countries are subject to laws, rules and procedures that differ from those of the United States, and thus we cannot be certain that foreign patent applications related to issued U.S. patents will result in issued patents. Furthermore, even if these patent applications do result in issued patents, some foreign countries provide significantly less effective patent enforcement than in the United States.

The status of patents involves complex legal and factual questions and the breadth of patented claims is uncertain. As a result, we cannot be certain that the patent applications that we file will result in patents being issued, or that our current patents and any patents that may be issued to us in the future will afford protection against competitors with similar technology. In addition, patents issued to us may be infringed upon or designed around by others and others may obtain patents that we need to license or design around, either of which would increase costs and may adversely affect our business, prospects, financial condition and operating results.

Our trademark applications in certain countries remain subject to outstanding opposition proceedings.

[Table of Contents](#)

We currently sell and market our vehicles in various countries under our Tesla marks. We have filed trademark applications for our Tesla marks and opposition proceedings to trademark applications of third parties in various countries in which we currently sell and plan to sell our vehicles. Certain of our trademark applications are subject to outstanding opposition proceedings brought by owners or applicants alleging prior use of similar marks. If we cannot resolve these oppositions and thereby secure registered rights in these countries, our ability to challenge third party users of the Tesla marks will be reduced and the value of the marks representing our exclusive brand name in these countries will be diluted. In addition, there is a risk that the prior rights owners could in the future take actions to challenge our use of the Tesla marks in these countries. Such actions could have a severe impact on our position in these countries and may inhibit our ability to use the Tesla marks in these countries. If we were prevented from using the Tesla marks in any or all of these countries, we would need to expend significant additional financial and marketing resources on establishing an alternative brand identity in these markets.

Our facilities or operations could be damaged or adversely affected as a result of disasters or unpredictable events.

Our corporate headquarters in Palo Alto and Tesla Factory in Fremont are located in Northern California, a region known for seismic activity. If major disasters such as earthquakes, fires, floods, hurricanes, wars, terrorist attacks, computer viruses, pandemics or other events occur, or our information system or communications network breaks down or operates improperly, our headquarters and production facilities may be seriously damaged, or we may have to stop or delay production and shipment of our products. In addition, our lease for our Palo Alto facility permits the landlord to terminate the lease following a casualty event if the needed repairs are in excess of certain thresholds and we do not agree to pay for any uninsured amounts. We may incur expenses relating to such damages, which could have a material adverse impact on our business, operating results and financial condition.

If our suppliers fail to use ethical business practices and comply with applicable laws and regulations, our brand image could be harmed due to negative publicity.

Our core values, which include developing the highest quality electric vehicles while operating with integrity, are an important component of our brand image, which makes our reputation particularly sensitive to allegations of unethical business practices. We do not control our independent suppliers or their business practices. Accordingly, we cannot guarantee their compliance with ethical business practices, such as environmental responsibility, fair wage practices, appropriate sourcing of raw materials, and compliance with child labor laws, among others. A lack of demonstrated compliance could lead us to seek alternative suppliers, which could increase our costs and result in delayed delivery of our products, product shortages or other disruptions of our operations.

Violation of labor or other laws by our suppliers or the divergence of an independent supplier's labor or other practices from those generally accepted as ethical in the United States or other markets in which we do business could also attract negative publicity for us and our brand. This could diminish the value of our brand image and reduce demand for our performance electric vehicles if, as a result of such violation, we were to attract negative publicity. If we, or other manufacturers in our industry, encounter similar problems in the future, it could harm our brand image, business, prospects, financial condition and operating results.

We are obligated to develop and maintain proper and effective internal control over financial reporting. We may not complete our analysis of our internal control over financial reporting in a timely manner, or these internal controls may not be determined to be effective, which may adversely affect investor confidence in our company and, as a result, the value of our common stock.

[Table of Contents](#)

We are required, pursuant to Section 404 of the Sarbanes-Oxley Act, to furnish a report by management on, among other things, the effectiveness of our internal control over financial reporting. This assessment includes disclosure of any material weaknesses identified by our management in our internal control over financial reporting, as well as a statement that our independent registered public accounting firm has issued an attestation report on the effectiveness of our internal control over financial reporting.

Complying with Section 404 requires a rigorous compliance program as well as adequate time and resources. As a result of developing, improving and expanding our core information technology systems as well as implementing new systems to support our sales, engineering, supply chain and manufacturing activities, all of which require significant management time and support, we may not be able to complete our internal control evaluation, testing and any required remediation in a timely fashion. Additionally, if we identify one or more material weaknesses in our internal control over financial reporting, we may be unable to assert that our internal controls are effective. For example, our management concluded that our internal control over financial reporting was ineffective as of December 31, 2012 because a material weakness existed in our internal control over financial reporting related to the presentation and disclosure of non-cash capital expenditures in our consolidated statements of cash flows. If we are unable to assert that our internal control over financial reporting is effective, or if our independent registered public accounting firm is unable to express an opinion on the effectiveness of our internal controls, we could lose investor confidence in the accuracy and completeness of our financial reports, which would have a material adverse effect on the price of our common stock.

Risks Related to the Ownership of our Common Stock

Concentration of ownership among our existing executive officers, directors and their affiliates may prevent new investors from influencing significant corporate decisions.

As of June 30, 2013, our executive officers, directors and their affiliates beneficially owned, in the aggregate, approximately 32.9% of our outstanding shares of common stock. In particular, Elon Musk, our Chief Executive Officer, Product Architect and Chairman of our Board of Directors, beneficially owned approximately 27.3% of our outstanding shares of common stock as of June 30, 2013. As a result, these stockholders will be able to exercise a significant level of control over all matters requiring stockholder approval, including the election of directors, amendment of our certificate of incorporation and approval of significant corporate transactions. This control could have the effect of delaying or preventing a change of control of our company or changes in management and will make the approval of certain transactions difficult or impossible without the support of these stockholders.

The trading price of our common stock is likely to continue to be volatile.

Our shares of common stock began trading on the Nasdaq Global Select Market on June 29, 2010 and therefore, the trading history for our common stock has been limited. In addition, the trading price of our common stock has been highly volatile and could continue to be subject to wide fluctuations in response to various factors, some of which are beyond our control. Our common stock has experienced an intra-day trading high of \$158.88 per share and a low of \$25.52 per share over the last 52 weeks.

In addition, the stock market in general, and the market for technology companies in particular, has experienced extreme price and volume fluctuations that have often been unrelated or disproportionate to the operating performance of those companies. Broad market and industry factors may seriously affect the market price of companies' stock, including ours, regardless of actual operating performance. These fluctuations may be even more pronounced in the trading market for our stock during the period following a securities offering. In addition, in the past, following periods of volatility in the overall market and the market price of a particular company's securities, securities class action litigation has often been instituted against these companies. This litigation, if instituted against us, could result in substantial costs and a diversion of our management's attention and resources.

[Table of Contents](#)

A substantial portion of our total outstanding shares are held by a small number of insiders and investors and may be sold in the near future. The large number of shares eligible for public sale or subject to rights requiring us to register them for public sale could depress the market price of our common stock.

The market price of our common stock could decline as a result of sales of a large number of shares of our common stock in the market in the future, and the perception that these sales could occur may also depress the market price of our common stock. Stockholders owning a substantial portion of our total outstanding shares are entitled, under contracts providing for registration rights, to require us to register shares of our common stock owned by them for public sale in the United States, subject to the restrictions of Rule 144. In addition, we have registered shares previously issued or reserved for future issuance under our equity compensation plans and agreements, a portion of which are related to outstanding option awards. Subject to the satisfaction of applicable exercise periods and, in certain cases, lock-up agreements, the shares of common stock issued upon exercise of outstanding options will be available for immediate resale in the United States in the open market. Sales of our common stock as restrictions end or pursuant to registration rights may make it more difficult for us to sell equity securities in the future at a time and at a price that we deem appropriate. These sales also could cause our stock price to fall and make it more difficult for you to sell shares of our common stock.

Mr. Musk borrowed funds from affiliates of certain underwriters in our public offerings in 2011 and 2013 and has pledged shares of our common stock to secure these borrowings. The forced sale of these shares pursuant to a margin call could cause our stock price to decline and negatively impact our business.

Beginning in June 2011, Goldman Sachs Bank USA, an affiliate of Goldman, Sachs & Co., has made extensions of credit in the aggregate amount of \$275 million to Elon Musk and the Elon Musk Revocable Trust dated July 22, 2003, or the Trust, a portion of which Mr. Musk used to purchase shares of common stock in our public offering in May 2013 and private placements in June 2011 and June 2013. Interest on the loan accrues at market rates. Goldman Sachs Bank USA received customary fees and expense reimbursements in connection with these loans. As a regulated entity, Goldman Sachs Bank USA makes decisions regarding making and managing its loans independent of Goldman, Sachs & Co. Mr. Musk and Goldman have a long-standing relationship of almost a decade. In addition, Morgan Stanley Smith Barney LLC has made a loan to Mr. Musk in the aggregate amount of \$25 million. We are not a party to these loans, which are full recourse against Mr. Musk and the Trust and are secured by pledges of a portion of the Tesla common stock currently owned by Mr. Musk and the Trust and other shares of capital stock of unrelated entities owned by Mr. Musk and the Trust. The terms of these loans were negotiated directly between Mr. Musk and Goldman Sachs Bank USA and Morgan Stanley Smith Barney LLC.

If the price of our common stock declines, Mr. Musk may be forced by Goldman Sachs Bank USA and/or Morgan Stanley Smith Barney LLC to provide additional collateral for the loans or to sell shares of Tesla common stock in order to remain within the margin limitations imposed under the terms of his loans. The loans between Goldman Sachs Bank USA and Morgan Stanley Smith Barney LLC on the one hand, and Mr. Musk and the Trust on the other hand, prohibit the non-pledged shares currently owned by Mr. Musk and the Trust from being pledged to secure any other loans. These factors may limit Mr. Musk's ability to either pledge additional shares of Tesla common stock or sell shares of Tesla common stock as a means to avoid or satisfy a margin call with respect to his pledged Tesla common stock in the event of a decline in our stock price that is large enough to trigger a margin call. Any sales of common stock following a margin call that is not satisfied may cause the price of our common stock to decline further.

[Table of Contents](#)

Anti-takeover provisions contained in our certificate of incorporation and bylaws, the provisions of Delaware law, and the terms of our convertible notes could impair a takeover attempt.

Our certificate of incorporation, bylaws, Delaware law and the terms of our convertible notes contain provisions which could have the effect of rendering more difficult, delaying or preventing an acquisition deemed undesirable by our board of directors. Our corporate governance documents include provisions:

- creating a classified board of directors whose members serve staggered three-year terms;
- authorizing “blank check” preferred stock, which could be issued by the board without stockholder approval and may contain voting, liquidation, dividend and other rights superior to our common stock;
- limiting the liability of, and providing indemnification to, our directors and officers;
- limiting the ability of our stockholders to call and bring business before special meetings;
- requiring advance notice of stockholder proposals for business to be conducted at meetings of our stockholders and for nominations of candidates for election to our board of directors;
- controlling the procedures for the conduct and scheduling of board and stockholder meetings; and
- providing the board of directors with the express power to postpone previously scheduled annual meetings and to cancel previously scheduled special meetings.

These provisions, alone or together, could delay or prevent hostile takeovers and changes in control or changes in our management.

As a Delaware corporation, we are also subject to provisions of Delaware law, including Section 203 of the Delaware General Corporation law, which prevents some stockholders holding more than 15% of our outstanding common stock from engaging in certain business combinations without approval of the holders of substantially all of our outstanding common stock.

Any provision of our certificate of incorporation or bylaws or Delaware law that has the effect of delaying or deterring a change in control could limit the opportunity for our stockholders to receive a premium for their shares of our common stock, and could also affect the price that some investors are willing to pay for our common stock.

In addition, the terms of the notes require us to repurchase the notes in the event of a fundamental change. A takeover of our company would trigger an option of the holders of the notes to require us to repurchase the notes. This may have the effect of delaying or preventing a takeover of our company that would otherwise be beneficial to our stockholders or investors in the notes.

If securities or industry analysts publishing research or reports about us, our business or our market change their recommendations regarding our stock adversely or cease to publish research or reports about us, our stock price and trading volume could decline.

The trading market for our common stock will be influenced by the research and reports that industry or securities analysts may publish about us, our business, our market or our competitors. If any of the analysts who may cover us change their recommendation regarding our stock adversely, or provide more favorable relative recommendations about our competitors, our stock price would likely decline. If any analyst who may cover us were to cease coverage of our company or fail to regularly publish reports on us, we could lose visibility in the financial markets, which in turn could cause our stock price or trading volume to decline.

[Table of Contents](#)

We do not expect to declare any dividends in the foreseeable future.

We do not anticipate declaring any cash dividends to holders of our common stock in the foreseeable future. Consequently, investors may need to rely on sales of their common stock after price appreciation, which may never occur, as the only way to realize any future gains on their investment. Investors seeking cash dividends should not purchase our common stock.

Risks Related to the Ownership of our Notes

Servicing our convertible senior notes requires a significant amount of cash, and we may not have sufficient cash flow from our business to pay our substantial debt.

We incurred \$660.0 million in aggregate principal amount of senior indebtedness in May 2013 when we issued pursuant to registered public offerings 1.50% convertible senior notes due 2018, or the notes. Our ability to make scheduled payments of the principal of, to pay interest on or to refinance the notes, depends on our future performance, which is subject to economic, financial, competitive and other factors beyond our control. Our business may not continue to generate cash flow from operations in the future sufficient to satisfy our obligations under the notes and any future indebtedness we may incur and to make necessary capital expenditures. If we are unable to generate such cash flow, we may be required to adopt one or more alternatives, such as reducing or delaying investments or capital expenditures, selling assets, refinancing or obtaining additional equity capital on terms that may be onerous or highly dilutive. Our ability to refinance the notes or future indebtedness will depend on the capital markets and our financial condition at such time. We may not be able to engage in any of these activities or engage in these activities on desirable terms, which could result in a default on the notes or future indebtedness. Any resulting acceleration of the repayment of the notes or future indebtedness after any applicable notice or grace periods could have a material adverse effect on our business, results of operations and financial condition.

We may still incur substantially more debt or take other actions, which would intensify the risks discussed above.

We and our subsidiaries may be able to incur substantial additional debt in the future. We will not be restricted under the terms of the indenture governing the notes, or the indenture, from incurring additional debt, securing existing or future debt, recapitalizing our debt or taking a number of other actions that are not limited by the terms of the indenture that could have the effect of diminishing our ability to make payments on the notes when due.

The notes will be effectively junior to any secured debt we may incur and structurally subordinated to any liabilities of our subsidiaries.

The notes are our unsecured obligations exclusively and are not guaranteed by any of our subsidiaries. Our subsidiaries are separate and distinct legal entities and have no obligation, contingent or otherwise, to make payments on the notes or to make any funds available for that purpose. In addition, the indenture does not restrict us or our subsidiaries from incurring additional debt or other liabilities. Accordingly, the notes will rank senior in right of payment to any future indebtedness we may incur that is expressly subordinated in right of payment to the notes, will rank equally in right of payment with any of our liabilities that are not so subordinated, will be effectively junior in right of payment to any secured indebtedness to the extent of the value of the assets securing such indebtedness and will be structurally subordinated to any indebtedness and other liabilities (including trade payables) of our subsidiaries. In the event of our bankruptcy, liquidation, reorganization or other winding up, our assets that secure any of our debt will be available to pay obligations on the notes only after such secured debt has been repaid in full. There may not be sufficient assets remaining to pay amounts due on any or all of the notes then outstanding.

[Table of Contents](#)

Our right to receive assets from any of our subsidiaries upon its liquidation or reorganization, and the right of holders of the notes to participate in those assets, is structurally subordinated to claims of that subsidiary's creditors, including trade creditors. Even if we were a creditor of any of our subsidiaries, our rights as a creditor would be subordinate to any security interest in the assets of that subsidiary and any indebtedness of that subsidiary senior to that held by us. Furthermore, none of our subsidiaries will be under any obligation to make payments to us, and any payments to us would depend on the earnings or financial condition of our subsidiaries and various business considerations. Statutory, contractual or other restrictions may also limit our subsidiaries' ability to pay dividends or make distributions, loans or advances to us. For these reasons, we may not have access to any assets or cash flows of our subsidiaries to make payments on the notes.

The notes are not protected by restrictive covenants.

The indenture does not contain any financial or operating covenants or restrictions on the payments of dividends, the making of investments, the incurrence of indebtedness or the issuance purchase or prepayment of securities by us or any of our subsidiaries. In addition, the limited covenants applicable to the notes do not require us to achieve or maintain any minimum financial results relating to our financial position or results of operations. The indenture contains limited provisions to afford protection to holders of the notes in the event of a fundamental change or other corporate transaction involving us.

Our ability to recapitalize, incur additional debt and take a number of other actions that are not limited by the terms of the notes could have the effect of diminishing our ability to make payments on the notes when due, and require us to dedicate a substantial portion of our cash flow from operations to payments on our indebtedness, which would reduce the availability of cash flow to fund our operations, working capital and capital expenditures.

Some significant restructuring transactions may not constitute a fundamental change, in which case we would not be obligated to offer to purchase the notes.

Upon the occurrence of a fundamental change, which is a significant corporate change or event specified in the indenture, a holder of notes has the right to require us to purchase such holder's notes. However, the fundamental change provisions will not afford protection to holders of notes in the event of other transactions that could adversely affect the notes. For example, transactions such as leveraged recapitalizations, refinancings, restructurings, or acquisitions initiated by us may not constitute a fundamental change requiring us to purchase the notes. In the event of any such transaction, the holders would not have the right to require us to purchase the notes, even though each of these transactions could increase the amount of our indebtedness, or otherwise adversely affect our capital structure or any credit ratings, thereby adversely affecting the holders of notes.

Recent regulatory actions may adversely affect the trading price and liquidity of the notes.

We expect that many investors in, and potential purchasers of, the notes will employ, or seek to employ, a convertible arbitrage strategy with respect to the notes. Investors that employ a convertible arbitrage strategy with respect to convertible debt instruments typically implement that strategy by selling short the common stock underlying the convertible notes and dynamically adjusting their short position while they hold the notes. Investors may also implement this strategy by entering into swaps on our common stock in lieu of or in addition to short selling the common stock. As a result, any specific rules regulating equity swaps or short selling of securities or other governmental action that interferes with the

[Table of Contents](#)

ability of market participants to effect short sales or equity swaps with respect to our common stock could adversely affect the ability of investors in, or potential purchasers of, the notes to conduct the convertible arbitrage strategy that we believe they will employ, or seek to employ, with respect to the notes. This could, in turn, adversely affect the trading price and liquidity of the notes.

[Table of Contents](#)

Conversion of the notes may dilute the ownership interest of existing stockholders, including holders who had previously converted their notes, or may otherwise depress the price of our common stock.

The conversion of some or all of the notes will dilute the ownership interests of existing stockholders to the extent we deliver shares upon conversion of any of the notes. Any sales in the public market of the common stock issuable upon such conversion could adversely affect prevailing market prices of our common stock. In addition, the existence of the notes may encourage short selling by market participants because the conversion of the notes could be used to satisfy short positions, or anticipated conversion of the notes into shares of our common stock could depress the price of our common stock.

The convertible note hedge and warrant transactions we entered into in connection with the issuance of notes may affect the value of the notes and our common stock.

In connection with the issuance of the notes, we entered into convertible note hedge transactions with the hedge counterparties. The convertible note hedge transactions cover, subject to customary anti-dilution adjustments, the number of shares of our common stock that initially underlay the notes. The convertible note hedge transactions are expected to reduce the potential dilution and/or offset potential cash payments we are required to make in excess of the principal amount upon conversion of the notes. We also entered into warrant transactions with the hedge counterparties relating to the same number of shares of our common stock, subject to customary anti-dilution adjustments. However, the warrant transactions could separately have a dilutive effect on our common stock to the extent that the market price per share of our common stock exceeds the applicable strike price of the warrants on the applicable expiration dates.

In addition, the hedge counterparties or their affiliates may modify their hedge positions by entering into or unwinding various derivatives with respect to our common stock and/or purchasing or selling our common stock or other securities of ours in secondary market transactions prior to the maturity of the notes (and are likely to do so during any observation period related to a conversion of notes). This activity could also cause or prevent an increase or a decrease in the market price of our common stock or the notes.

We do not make any representation or prediction as to the direction or magnitude of any potential effect that the transactions described above may have on the price of the notes or the shares of our common stock. In addition, we do not make any representation that the hedge counterparties have engaged or will engage in these transactions or that these transactions, once commenced, will not be discontinued without notice.

Volatility in the market price and trading volume of our common stock could adversely impact the trading price of the notes.

[Table of Contents](#)

A decrease in the market price of our common stock would likely adversely impact the trading price of the notes. The market price of our common stock could also be affected by possible sales of our common stock by investors who view the notes as a more attractive means of equity participation in us and by hedging or arbitrage trading activity that we expect to develop involving our common stock. This trading activity could, in turn, affect the trading prices of the notes. Holders who receive common stock upon conversion of the notes will also be subject to the risk of volatility and depressed prices of our common stock.

The ability of holders of the notes to convert the notes prior to the close of business on the business day immediately preceding March 1, 2018 is conditioned on, among other events, the closing price of our common stock reaching and maintaining a closing price no less than a specified threshold for a given period of time, the trading price of the notes falling below a certain level or the occurrence of specified corporate events or distributions. If the closing price threshold is not satisfied, the trading price of the notes does not fall below the relevant threshold and none of the specified distributions or corporate events that would permit a holder to convert occurs, holders would not be able to convert notes except during the period after March 1, 2018 and prior to the maturity date of the notes.

Future sales of our common stock in the public market could lower the market price for our common stock and adversely impact the trading price of the notes.

In the future, we may sell additional shares of our common stock to raise capital. In addition, a substantial number of shares of our common stock is reserved for issuance upon the exercise of stock options and upon conversion of the notes. We cannot predict the size of future issuances or the effect, if any, that they may have on the market price for our common stock. The issuance and sale of substantial amounts of common stock, or the perception that such issuances and sales may occur, could adversely affect the trading price of the notes and the market price of our common stock and impair our ability to raise capital through the sale of additional equity securities.

We may not have the ability to raise the funds necessary to settle conversions of the notes or to purchase the notes upon a fundamental change.

Holders of the notes will have the right to require us to purchase their notes upon the occurrence of a fundamental change at a purchase price equal to 100% of the principal amount of the notes, plus accrued and unpaid interest, if any, to, but not including, the fundamental change purchase date. In addition, upon conversion of the notes, we will be required to make cash payments in respect of the notes being converted. However, we may not have enough available cash or be able to obtain financing at the time we are required to make purchases of notes surrendered therefor or notes being converted. In addition, our ability to purchase the notes or to pay cash upon conversions of the notes may be limited by law, by regulatory authority or by agreements governing our future indebtedness. Our failure to purchase notes at a time when the purchase is required by the indenture or to pay cash payable on future conversions of the notes as required by the indenture would constitute a default under the indenture. A default under the indenture or the fundamental change itself could also lead to a default under agreements governing our future indebtedness. If the repayment of the related indebtedness were to be accelerated after any applicable notice or grace periods, we may not have sufficient funds to repay the indebtedness and purchase the notes or make cash payments upon conversions thereof.

The conditional conversion feature of the notes, if triggered, may adversely affect our financial condition and operating results.

In the event the conditional conversion feature of the notes is triggered, holders of notes will be entitled to convert the notes at any time during specified periods at their option. If one or more holders

[Table of Contents](#)

elect to convert their notes, we would be required to settle a portion of our conversion obligation through the payment of cash, which could adversely affect our liquidity. In addition, even if holders do not elect to convert their notes, we could be required under applicable accounting rules to reclassify all or a portion of the outstanding principal of the notes as a current rather than long-term liability, which would result in a material reduction of our net working capital.

The conditional conversion feature of the notes could result in a holder of notes receiving less than the value of our common stock into which the notes would otherwise be convertible.

Prior to the close of business on the business day immediately preceding March 1, 2018, a holder of notes may convert such holder's notes only if specified conditions are met. If the specific conditions for conversion are not met, a holder of notes will not be able to convert such holder's notes, and such holder may not be able to receive the value of the cash and, if applicable, shares of our common stock (subject to our right to deliver cash in lieu of all or a portion of such shares of our common stock) into which the notes would otherwise be convertible.

Upon conversion of the notes, a holder of notes may receive less valuable consideration than expected because the value of our common stock may decline after such holder exercises such holder's conversion right but before we settle our conversion obligation.

Under the notes, a converting holder will be exposed to fluctuations in the value of our common stock during the period from the date such holder surrenders notes for conversion until the date we settle our conversion obligation.

Upon conversion of the notes, the amount of consideration that a holder of notes will receive upon conversion of such holder's notes will be determined by reference to the volume weighted average prices of our common stock for each VWAP trading day in a 20 VWAP trading day observation period. Although the number of shares (if any) that a holder of notes receives upon conversion of such holder's notes with respect to any VWAP trading day during the observation period will be determined based on the volume weighted average price of our common stock on such VWAP trading day, we will not deliver such shares until the third business day following the end of the applicable observation period. Accordingly, if the price of our common stock decreases during this period, the amount and/or value of consideration a holder of notes receives will be adversely affected.

The accounting method for convertible debt securities that may be settled in cash, such as the notes, may have a material effect on our reported financial results.

In May 2008, the Financial Accounting Standards Board, which we refer to as FASB, issued FASB Staff Position No. APB 14-1, Accounting for Convertible Debt Instruments That May Be Settled in Cash Upon Conversion (Including Partial Cash Settlement), which has subsequently been codified as Accounting Standards Codification 470-20, Debt with Conversion and Other Options, which we refer to as ASC 470-20. Under ASC 470-20, an entity must separately account for the liability and equity components of the convertible debt instruments (such as the notes) that may be settled entirely or partially in cash upon conversion in a manner that reflects the issuer's economic interest cost. The effect of ASC 470-20 on the accounting for the notes is that the equity component is required to be included in the additional paid-in capital section of stockholders' equity on our consolidated balance sheet, and the value of the equity component would be treated as original issue discount for purposes of accounting for the debt component of the notes. As a result, we are required to record a greater amount of non-cash interest expense in current periods presented as a result of the amortization of the discounted carrying value of the notes to their face amount over the term of the notes. We report lower net income (or greater net loss) in our financial results because ASC 470-20 requires interest to include both the current period's

[Table of Contents](#)

amortization of the debt discount and the instrument's coupon interest, which could adversely affect our reported or future financial results, the market price of our common stock and the trading price of the notes.

In addition, convertible debt instruments (such as the notes) that may be settled entirely or partly in cash are currently accounted for utilizing the treasury stock method, the effect of which is that the shares issuable upon conversion of the notes are not included in the calculation of diluted earnings per share except to the extent that the conversion value of the notes exceeds their principal amount. Under the treasury stock method, for diluted earnings per share purposes, the transaction is accounted for as if the number of shares of common stock that would be necessary to settle such excess, if we elected to settle such excess in shares, are issued. We cannot be sure that the accounting standards in the future will continue to permit the use of the treasury stock method. If we are unable to use the treasury stock method in accounting for the shares issuable upon conversion of the notes, then our diluted earnings per share would be adversely affected.

Holders of notes are not entitled to any rights with respect to our common stock, but will be subject to all changes made with respect to them.

Holders of notes are not entitled to any rights with respect to our common stock (including, without limitation, voting rights and rights to receive any dividends or other distributions on our common stock) prior to the last VWAP trading day of the applicable observation period, but holders of notes will be subject to all changes affecting our common stock. For example, if an amendment is proposed to our certificate of incorporation or bylaws requiring stockholder approval and the record date for determining the stockholders of record entitled to vote on the amendment occurs prior to the last VWAP trading day of the applicable observation period such holder will not be entitled to vote on the amendment, although such holder will nevertheless be subject to any changes affecting our common stock.

The adjustment to the conversion rate for notes converted in connection with a make-whole fundamental change may not adequately compensate a holder of notes for any lost option value of such holder's notes as a result of such transaction.

If a make-whole fundamental change, which is a type of fundamental change specified in the indenture, occurs prior to the maturity date, under certain circumstances, we will increase the conversion rate for the notes by a number of additional shares of our common stock for notes converted in connection with such make-whole fundamental change. The increase in the conversion rate will be determined based on the date on which the specified corporate transaction becomes effective and the price paid (or deemed to be paid) per share of our common stock in such transaction. The adjustment to the conversion rate for notes converted in connection with a make-whole fundamental change may not adequately compensate a holder of notes for any lost option value of such holder's notes as a result of such transaction. In addition, if the price of our common stock in the transaction is greater than \$225.00 per share or less than \$92.24 per share (in each case, subject to adjustment), no adjustment will be made to the conversion rate. Moreover, in no event will the conversion rate per \$1,000 principal amount of notes as a result of this adjustment exceed 10.8413, subject to certain adjustments.

Our obligation to increase the conversion rate upon the occurrence of a make-whole fundamental change could be considered a penalty, in which case the enforceability thereof would be subject to general principles of reasonableness and equitable remedies.

The fundamental change repurchase feature of the notes may delay or prevent an otherwise beneficial attempt to take over our company.

[Table of Contents](#)

The terms of the notes require us to repurchase the notes in the event of a fundamental change. A takeover of our company would trigger an option of the holders of the notes to require us to repurchase the notes. This may have the effect of delaying or preventing a takeover of our company that would otherwise be beneficial to our stockholders or investors in the notes.

The conversion rate of the notes may not be adjusted for all dilutive events.

The conversion rate of the notes is subject to adjustment for certain events, including, but not limited to, the issuance of certain stock dividends on our common stock, the issuance of certain rights or warrants to holders of our common stock, subdivisions or combinations of our common stock, distributions of capital stock, indebtedness, or assets to holders of our common stock, cash dividends and certain issuer tender or exchange offers. However, the conversion rate will not be adjusted for other events, such as a third-party tender or exchange offer or an issuance of common stock for cash or in connection with an acquisition, that may adversely affect the trading price of the notes or our common stock. We are not restricted from issuing additional common stock during the term of the notes and have no obligation to consider the interests of holders of the notes in deciding whether to issue common stock. An event that adversely affects the value of the notes may occur, and that event may not result in an adjustment to the conversion rate.

We cannot guarantee that there will be an active trading market for the notes.

Prior to the issuance of the notes, there had been no trading market for the notes, and we have not applied and do not intend to apply to list the notes on any securities exchange or to arrange for quotation on any automated dealer quotation system. Moreover, the underwriters of the note offering who have acted as market makers in the notes following the issuance of the notes may cease their market-making at any time without notice. If the underwriters cease to act as market makers for the notes, we cannot guarantee that another firm or person will make a market in the notes. In addition, the liquidity of the trading market in the notes, and the market price quoted for the notes, may be adversely affected by changes in the overall market for this type of security and by changes in our financial performance or prospects or in the prospects for companies in our industry generally. As a result, we cannot guarantee that there will be an active trading market for the notes. If an active trading market is not maintained, the market price and liquidity of the notes may be adversely affected. In that case a holder of notes may not be able to sell such holder's notes at a particular time or such holder may not be able to sell such holder's notes at a favorable price.

Any adverse rating of the notes may cause their trading price to fall.

We have not sought and do not intend to seek a rating on the notes. However, if a rating service were to rate the notes and if such rating service were to lower its rating on the notes below the rating initially assigned to the notes or otherwise announces its intention to put the notes on credit watch, the trading price of the notes could decline.

A holder of notes may be subject to tax if we make or fail to make certain adjustments to the conversion rate of the notes even though such holder of notes does not receive a corresponding cash distribution.

The conversion rate of the notes is subject to adjustment in certain circumstances, including the payment of cash dividends. If the conversion rate is adjusted as a result of a distribution that is taxable to our common stockholders, such as a cash dividend, a holder of notes may be deemed to have received a dividend subject to U.S. federal income tax without the receipt of any cash. In addition, a failure to adjust (or to adjust adequately) the conversion rate after an event that increases the proportionate interest of a

[Table of Contents](#)

holder of notes in us could be treated as a deemed taxable dividend to such holder. If a make-whole fundamental change occurs on or prior to the maturity date, under some circumstances, we will increase the conversion rate for notes converted in connection with the make-whole fundamental change. Such increase may also be treated as a distribution subject to U.S. federal income tax as a dividend. If a holder of notes is a non-United States holder for U.S. federal income tax purposes, any deemed dividend would be subject to U.S. federal withholding tax at a 30% rate, or such lower rate as may be specified by an applicable treaty, which may be set off against subsequent payments on the notes.

ITEM 2. UNREGISTERED SALES OF EQUITY SECURITIES AND USE OF PROCEEDS

None.

ITEM 3. DEFAULT UPON SENIOR SECURITIES

None.

ITEM 5. OTHER INFORMATION

Recently, our Board of Directors reviewed the job responsibilities of our senior management. On August 8, 2013, the Board affirmed the positions held by George Blankenship, our Vice President, Worldwide Retail, and Gilbert Passin, our Vice President, OEM and Re-Manufacturing, but determined that they no longer have reporting requirements under Section 16 of the Securities Exchange Act of 1934, as amended, or Section 16. On the same date, the Board also determined that Greg Reichow, our Vice President, Production, and Jerome Guillen, our Vice President, Service and Sales Operations, have reporting requirements under Section 16.

ITEM 6. EXHIBITS

See Index to Exhibits at end of report.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned, thereunto duly authorized.

Date: August 8, 2013
